INTRODUCTION

In recent years, the food industry has incorporated digital transformation into its services to improve efficiency and workflow. And with time, the food tech industry has steadily evolved to a great extent. As more and more startups are stepping into this field, new strategies are employed to build stronger business models and engineer better ways of making a profit.

There is no bigger industry on earth than the food and agriculture industry. Plus, everyone that eats is online, so why not bring the services online to reach a broader audience and perpetuate convenience? This is where foodtech comes in.

The advent of innovative technologies in foodtech has created a plethora of options that utilize technologies like Big Data or the Internet of Things (IoT) to significantly improve business workflow, optimize convenience, and improve food quality, production, and retention.

Technology is now catering to the growing demand for healthier and more sustainable food options. Consumers today are keen on knowing and understanding the ingredients used in their food and the traceability of these ingredients, and have become increasingly aware of food fraud and hygiene factors. More and more consumers now prefer clean labels, wholesomeness, and functional, health-supportive ingredients.

But the question is, what is foodtech and what role does it play in the food and beverage sector? In this in-depth analysis of the FoodTech business model, we will share with you everything you need to know about the industry.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

WHAT IS FOODTECH?

Food technology refers to the branch of food science concerned with utilizing cutting-edge technologies to produce, develop, manufacture, preserve, control quality, and distribute advanced and unique food products.

This industry looks into how technology can be used to design, produce, select, deliver, and consume food in ways that are efficient and sustainable. Foodtech seeks to change with the times and meet the needs of consumers who are becoming more and more selective by promoting healthier and more environmentally friendly eating habits.

Businesses and initiatives involved in food technology use innovative technologies such as the Internet of Things (IoT), Big Data, and Artificial Intelligence (AI) to transform and modernize agriculture and the food industry in order to improve results.

Food technology improves food production and maintenance by introducing food irradiation and aseptic packaging. This in turn eliminates contaminating microbes and extends the product's shelf-life. These technologies also increase crop protection and maximize outputs, thereby achieving sustainability goals. Such goals can range from lowering greenhouse gas emissions and minimizing water waste, to accelerating crop growth.

Furthermore, the growing global demand for food has resulted in the emergence of numerous growth and investment opportunities for food tech innovations to improve

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

the food ecosystem. Foodtech, as an effective disruptor, assists businesses, governments, and even customers in overcoming the challenges of the food industry.

AGTECH VS FOODTECH

Agricultural technology and food science technology play a significant role in the food development process, which develops from farm to plate. The agritech and foodtech industries strive to enhance seeds and crops, improve diet and provide functional foods for preventative health.

Food and agriculture are complex industries that are closely related and dependent on each other. These two sectors are interconnected and remain mutually exclusive of one another. The food industry is booming, which means that food production, patterns of consumption, and distribution circuit are areas in the food sector where technology and innovation are implemented to bettering services and provide sustainable solutions.

FoodTech on its own is an umbrella term that houses a variety of terminologies including Agtech or Agritech which is the second most relevant term. Now, some may argue that with the rate at which AgTech is growing, it might as well be considered its own industry. However, given that it stems from the creation of FoodTech and is being pioneered based on the same principles (for a sustainable future), it is important to realize their relationship. So what is AgTech?

While agritech is the collection of scientific techniques that are used to enhance plants, animals, and microorganisms, offering benefits to farmers, the environment, and consumers, foodtech is driven by technological advancement, and

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

health-conscious and preventative health for aging populations.

Agtech includes using technologies like field sensors, drones, data analytics apps, or water management solutions to improve farming efficiency and sustainability.

It employs a variety of techniques, including traditional plant breeding, which entails interbreeding related organisms to obtain desirable agricultural characteristics. Marker-assisted breeding enables breeders to map genes and screen populations for desirable traits. Genetic modification, where genes are added or removed to produce desirable agricultural characteristics. Plus, new breeding technologies (NBTs) enable plant breeders to precisely and efficiently develop desirable characteristics in their crops such as tolerance to drought, disease, or insects; improved nutrition; reduced allergens; and extended shelf-life.

Plant biotechnology, animal biotechnology, and biofertilizers use these techniques to protect crops from pests and diseases, reduce the need for pesticides, lower the cost of food production, and provide an alternative fuel source.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

THE IMPACT OF FOODTECH

Technology aims to deeply impact every aspect of our lives. The food industry is no different, as foodtech has grown to become more prominent over the years.

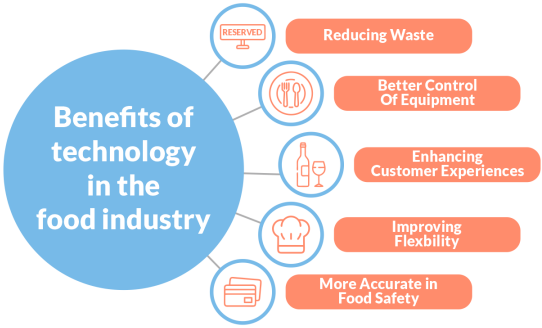

The 21st century has had unprecedented growth in the food industry. These advances have helped the industry to develop and maintain the long food supply chain that caters to the human love for food.

This growth is partially in response to the increasing consumer concern for the environment. This concern has driven food companies to offer options that are perceived to be more sustainable, ethical, and healthy. This trend is mostly propagated by the younger customer demographic, whose food purchasing decisions are heavily influenced by personal values related to larger issues, including environmental protection and sustainability, social justice, and animal welfare.

This growth is also caused by the increase in food demands across the world. With about 7.5 billion people living in the world. The food industry is pressured to create and innovate new methods to produce and distribute healthy food supplies quickly and efficiently. According to a recent report from ING, technology helps food manufacturers produce more efficiently for a growing world population. According to TechCrunch, food tech funding went from $60 million in 2008 to over $1 billion in 2015. While in 2018, food tech had its biggest year yet with $16.9 billion in funding.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Lastly, as concern for the earth's safety grows, the food industry is required to increase its effort toward the environment. This is because their actions directly affect the environment more than most industries. With 70% of freshwater being used for food systems and 20-30% of global greenhouse emissions coming from agriculture, the environment continues to be affected by the food industry. Food technology is hence required to help reduce the industry's footprint as it caters to the human population that is estimated to grow to another billion in 2030.

INCREASED FOOD PRODUCTION

With the world's population at 7.5 billion and rapidly growing. The food industry is expected to grow and innovate better methods to provide for the ever-growing population.

This challenge to feed such a large population is handled in no small part by food technology, as It helps companies to provide for a growing customer base with quality and healthy food products at a rapid pace.

Food technology essentially helps with the fight against world

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

hunger by helping produce more food at a sustainable pace. Companies and farmers hence incorporate digital and advanced technology in producing food and raw materials for industries and general consumption to combat the growing demand.

GMO's

Food technology has given rise to the creation of GMOs that play an important role in the production of high-quality and disease-resistant products.

GMO stands for a genetically modified organism. These organisms are developed by studying and determining desirable genes in the product's DNA. These genes are then isolated and inserted into the cells of the product, hence creating a new breed or version of the product that contains the desirable traits needed.

This process creates disease-resistant and high-quality products that prevent loss of yield. Moreover, they are made to grow and adapt to areas where the environment is not favorable for production. This helps to support the demand and ensure the supply of food in every region of the world.

Examples of major GMO crops are wheat, corn, rice, etc.

Drones

Drones have found their place in the food industry, as they now work to help monitor the production of food products with the use of satellite imagery from above.

This process is termed precision agriculture. It helps to monitor crop growth in order to effectively deal with problem areas in order to avoid losses. Hence, it helps ensure the maximum production of food.

Drones are being explored in terms of food delivery, as

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

companies consider using drones as a viable method of delivering food worldwide.

Technology in the meat industry
As in most industries, artificial intelligence has grown to help improve the processes that take place within the food industry.

In poultry production, AI stands as an efficient tool that helps improve the production of meat and eggs. As a raw material for other food items, the world's demand for meat and eggs is quite high. AI helps to increase production by detecting birds having health-related issues through the sound of the birds.

It also ensures the rapid pace of production by automating different tasks on poultry farms and butchery. It enlists machines and robots to perform difficult jobs of butchery and complex cutting of meat. Hence, increasing the pace of production.

IMPROVED FOOD STORAGE

A high priority of the food industry is the storage of food products after production. These food products have a lower shelf-life than most products from other industries. This hence makes food storage a priority in order to prevent waste and loss of products.

Food technology has helped devise complex and efficient ways to help combat these problems. The food industry has helped companies to safely store food products for longer periods of time.

Companies now have large storage facilities that have the recommended storage temperature, environment, and the best nitrogen and oxygen levels. These storage facilities,

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

hence, help increase the shelf-life of the products.

Storage facilities are also installed on transport vehicles to safely store and transfer food products with the required levels of chemicals, moisture, and air.

Storage facilities and transport vehicles now come with an oxygen absorber that is used to prevent rotting and insect attacks on fruits, vegetables as well as meat.

THE FACILITY OF THE 3D FOOD PRINTER

3D food printing stands as one of the greatest achievements of the 21st century. This wonder of food technology works like an inkjet printer, which is capable of printing edible food items. From pieces of candy to a complete pizza.

Artificial intelligence is used to design the structure and layers of the intended food product. The food product is then printed according to the design fed to the software.

The method hence stands as a viable method of tackling the world's demand for food products, as well as a viable method for companies to procure the necessary raw ingredients needed to create their food products.

FOOD PACKAGING

One of the greatest impacts of food technology can be seen in the methods in which food is packaged. This sector is one of the most basic and important aspects of the food industry. This is because it determines how food products are seen, received, and delivered. This directly affects the perceived

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

quality of the product, the health status of the product, and the way the product is delivered.

Food packaging functions to help prevent the contamination of food products with germs and hence helps guarantee the health of customers. This is quite important as customers around the world become more aware of their health status.

Advancements in food packaging have ensured that food packaging is made according to the needs of every food product. Every food item has its type of packaging. For example, dairy products are delivered in tetra packaging due to their preferred delivery method and shelf-life while beverages, tins, and glasses are used with a specific amount of O2, CO2, and N2 to protect and increase the shelf-life while ensuring the product's quality.

ACCOUNTABILITY OF FOOD

Due to the advent of Internet technology, customers now have access to the latest breakthrough and knowledge in the science of food.

This information helps the customers to accurately scrutinize food products before buying them. This in turn forces the manufacturers to increase their care and innovation for their food products.

This also helps the customers call out the manufacturers when questionable food ingredients and processes are used for the production of food products. This also forces them to create quality and healthy products, hence protecting the customers' health.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

PROMOTES A CULTURE OF FOOD SAFETY

A major impact of food technology is it helps scientists thoroughly study and gather information about foods worldwide. Special departments have been formed that perform research and awareness programs on the foods.

This knowledge helps the general public and companies understand the chemical and biological makeup of food products. This helps the general public understand the merit and demerits of specific food products and recommend a daily or weekly amount for health safety.

Companies and farmers can use the gathered information to devise better ways to manufacture, store and deliver food products.

MICRONUTRIENT FOOD FORTIFICATION

Research and innovation of the 21st century have helped raise awareness of micronutrients and their importance to companies and consumers worldwide.

This information has helped in the discovery of different regions of the world that lack a sufficient amount of micronutrients that lead to certain diseases and weaknesses like goiter due to deficiency of iodine and scurvy from vitamin C.

This information is then used by manufacturers to enrich their

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

food with the appropriate micronutrient. It helps companies determine if their products are naturally rich in specific micronutrients needed by their region, or if they need to augment the products by infusing the nutrient.

For example, commercial fortification of Iodized salts, wheat, and cornflour is available for overcoming nutrient deficiency.

This fortification ensures that every region gets a balanced diet and all the necessary micronutrients, regardless of their region's deficiency.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

CHALLENGES OF THE FOOD INDUSTRY

As a multi-trillion dollar market made up of farmers, manufacturers, retailers, and consumers, the Food industry has some challenges that impede its growth. Below, there are listed some of the major challenges facing the food industry.

PRODUCT DEVELOPMENT

As a multi-trillion dollar market, the food industry is home to a high level of market competition. This makes it difficult for new products to gain traction and stand on their own. Every product needs to stand out.

Also, new product development involves the use of specialized study of disciplines like food processing and food research to create entirely new products or to fine-tune old existing products to the taste of new customers. This, therefore, means it takes longer to develop new products in the food industry.

DATA COLLECTION, MANAGEMENT, AND ANALYSIS

Sourcing for data proves to be a big problem for the food industry as the needed accurate data is hard to acquire and gather but is necessary for making accurate data-driven

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

decisions.

The acquisition of data involves collecting information from suppliers, manufacturers, retailers, and consumers. This is a major challenge for the industry.

REGULATION

Many rules guide the food industry and what can and cannot be used to produce products for the markets. These rules continue to evolve at a rapid pace, hence making it hard for food industries to know what they can and cannot use in their products.

FOOD PACKAGING

Food Packaging over the years has become a problem as more and more plastic is used to package the food. These plastics last for long periods of time, meaning when they are thrown away, they continue to linger and pollute the earth.

Food packages are created to protect the product in a manner that is not only efficient, but also eye-catching to the customers. It works as a marketer for the company. But it also leads to food waste, with 1 in 8 meals being wasted due to inadequate packaging.

PRODUCTION COSTS

The cost for the production of good products varies according to the products being made. The cost is affected by factors such as land, water, energy, equipment, labor, and interest rates. Oftentimes, the cost of production is a big problem for food industries.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

CONSUMER TASTE PREFERENCES

Companies in a bid to make new products often fail, as the products do not match the taste of their customers. Companies hence have to do extensive research on their customers before investing time and money in a new product.

DISTRIBUTION

Due to the complex and competitive food supply chain. It is hard for distributors to help food industries get their products into the hands of their customers.

The distributor's role is quite important as they move the goods from producer to consumer. The food supply chain however impedes this movement and causes a great issue for the industry.

SAFETY STANDARDS

Products have to go through rigorous testing by the FDA and other countries' specific regulatory bodies before they can be marketed. This test often takes long periods of time and hence means the product takes a while before reaching the market.

MARKETING

Like all industries, the food industry has to create awareness about its product and align its products with the market in order to make gains. However, it is harder for the food industry as other criteria like safety and quality are considered a factor.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

FOODTECH USE CASES

Foodtech offers a wide range of applications, from the beginning stages of production through the point of consumption. Every day, technology gives us a method to advance, and in the food industry, it changes how we produce and consume food by improving farming productivity, digitalizing food retail to improve consumer welfare, and tracking food consumption data.

FOOD PRODUCTION & PROCESSING

The use of machines in the production and processing of food serves as a major factor in increasing the efficiency of food production for a growing world population. The advent of technology not only ensures the availability of food at reasonable prices, but also guarantees the quality of processed food, with the use of cutting-edge technology used to keep the food fresh and extend its shelf-life. This cutting-edge technology includes robotics and machines that drive down the cost of keeping the food fresh through packaging and increasing productivity, drones that assess the best-growing conditions for crops, and 3D printing to eliminate waste.

FOOD RETAIL

Consumers seek satisfaction. How best to instantaneously satisfy their needs and also preserve a good user experience? There is a growing need, with many wanting to purchase items seamlessly and have them delivered without

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

disruption. Food retail creates a medium where consumers have access to their favorite meals and get to choose from a variety of options in their comfort zones. The consumer handles everything, giving them the chance to track their purchases online.

FOOD DELIVERY

Consumers can place orders and have them delivered from online or local vendors with delivery systems that include products or ready-to-eat meal delivery. These platforms are designed to create an optimal user experience from the point of order to delivery.

FOOD TECH LOGISTICS

With the aid of technology, suppliers and distributors of food products have the ability to track their products with greater accuracy, easy traceability, and optimum transparency. This is an important consideration when working with perishable goods and food. Food logistics strategies ultimately save time and money while also extending product shelf-life.

INGREDIENT INFORMATICS

This involves the application of machine learning to recipes and ingredients based on an analysis of consumer preferences to create new food products using data, analysis, and artificial intelligence, thus eliminating the challenges developed by changing consumer preferences. The prime focus of this is to shorten the time span in which new food products are created.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

FOOD SAFETY TECHNOLOGY

The introduction of technology in food safety is a major step toward delivering safe food to consumers. The AI maximizes resource utilization by reducing human error during the production and processing stages, detects harmful ingredients present in products, and effectively eliminates the risks of contamination that are likely to occur due to exposure. The use of technologies like AI and robots has proved to be a major success in the delivery of safe food to consumers in the food industry.

PRODUCT PACKAGING

The main aim of food packaging is to prevent product deterioration and prolong its shelf-life. Packaging protects the food against physical, chemical, or biological damage. It is an integral part of the preservation system, acting as a barrier between the product and its external environment. A suitable packaging technique that extends the shelf-life, maintains freshness, and guards against damage during transport are devised based on the food product.

HYPER-PERSONALIZED FOOD

A.I. is helping develop products based on the personalized tastes of consumers. These products are engineered solely based on the preferences of the consumers and are built to fulfill their desires, thereby granting consumer satisfaction. While consumers' expectations in the food domain increase over time to match this step, hyper-personalized food is the bridge to this gap as it covers the convenience, health, and lifestyle of the consumer.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

DIET TRACKERS

Trackers are used to keep tabs on the diet plans of users to record what they eat and when. This data is used to plan their meals and keep tabs on the nutritional content of their meals to ensure they are up to par.

FOOD SORTING

A product's contents may now be sorted using technology, which helps the user learn about the substances in the product and whether they are dangerous to their health.

REDUCING FOOD WASTAGE

With the use of smart technology, startup companies have been able to track the food being thrown away and generate analytics that allows restaurants to see what is being wasted the most. This allows them to make smarter decisions on the number of products to produce.

IMPROVING NUTRITION LABELS

The nutrition label shows key nutrients that impact your health and can be used to support personal dietary needs. The purpose of this is to provide accurate but basic information that helps people manage their weight and also maintain optimal health by offering nutritional insight to guide their food choices. Technology has made it possible to properly record the amounts of ingredients in products, guiding consumers' dietary choices and warning them of potentially dangerous compounds.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

FOOD MATCHING

With AI, it is now possible to recommend recipes to users depending on their food preferences. An important factor when building these systems is the source of data. It can be based on past orders, a user's reaction to a certain blog on food, social networking-related reactions, or previous search history. The suggestion is made based on these factors to best suit the user.

FOOD DISCOVERY

Platforms such as Foodstyles exist to make finding the food you want as simple as can be. These platforms exist for consumers to explore their options for food the simple way by sifting through thousands of restaurants, menus, cafés, diners, coffee shops, and confectioneries to find the dish they want according to their preferences and to satisfy their cravings. These apps tell you where you can get your dish, what it contains, as well as nutritional information.

PERSONALIZED NUTRITION ADVICE

The AI develops a personalized nutrition plan for consumers based on their metabolism and biochemistry. This helps consumers manage their weight, better control their blood sugar and cholesterol, and find the most beneficial dietary plan for their health. This feature is usually developed by a nutritionist and includes foods that are suitable for the customers based on their data.

EXAMPLE OF FOOD TECH BUSINESS

There are a number of companies that are investing in the modern way of improving the food industry through data analytics, AI implementation, and technology. Here's a list of some of them.

COOK MY GRUB

Cook my Grub is an online food service website that allows users to pre-order fresh, healthy, authentic homemade food from home chefs. They offer authentic homemade cuisines that differentiate them from other food artisans and have them delivered straight to the comfort of your home.

HIER

Hier makes it possible for customers to access a more regional, diverse, and robust food supply while also streamlining the local supply chain. Hier automates the purchasing procedures between local businesses and suppliers of various kinds. Hier focuses on bridging the gap between local suppliers and consumers.

GARDIN

Gardin's idea is to enable food producers to monitor and manage the nutritional value of their products in a real-world

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com

environment without labs. This also involves the environment in which these products are being developed. Gardin's OS provides insight into whether the environment is favorable for the development of a particular product.

SWIGGY

Swiggy is an AI-based food technology company that works on designing the world's most advanced autonomous food inspection system. Their goal is to equip every food organization with the tools needed to enhance the evaluation and control of food quality.

NOTPLA

Notpla is a company that comprises a team of designers, chemists, engineers, and entrepreneurs that develop packaging that is properly suited for products. The company develops packaging that is friendly to the environment and produces it.

JIMINI'S

Jimini's produces protein bars made of edible insects. These products are manufactured exclusively from insects that are bred in Europe, and whose quality has been thoroughly tested.

Insects are a great source of protein, even more so than commonly consumed meats. They are considered to be highly nutritious; the majority of them are rich in protein, healthy fats, iron, and calcium, and considerably lower in carbohydrates. Jimini's goal is to deliver an alternate source of protein to meet its increasingly high demand.

KEY DRIVERS OF FOOD TECH INVESTMENTS

Consumers are becoming more selective about the foods they eat. More individuals are becoming increasingly conscious of what is in their food, where it comes from, and how the environment is impacted by its production and supply. Consumers' growing attention to sustainability, health, and freshness has increased pressure on the food sector to innovate.

Consumer packaged goods (CPG) incumbents hurried to meet these increased expectations in the past by promising convenient, high-quality food. However, declining margins on commodity ingredients and industry consolidation have discouraged these efforts, leading many of them to refocus their emphasis, which has opened the door for a fresh batch of (pun intended) ambitious inventors and startups.

Consumers today want wholesome food that is simple to get, produces little waste, and complements their own brands in addition to convenience and consistency. This implies that In actuality, running a food firm has never been more challenging.

Although consumer needs have grown to include ethical principles, convenience demands have not been replaced. Spending patterns, however, indicate that consumers are prepared and eager to pay a premium for advancements in food technology that will satisfy their expanding demands for comfort, health, and little environmental effect. The chance

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com

for food entrepreneurs to profit from these market demands is expanding!

AN ANALYSIS OF PROMINENT FOOD TECH COMPANIES BUSINESS MODEL

Although the food technology industry has existed since the first men thought to cook and sell food, the 21st century has played host to unprecedented growth in the sector and all it entails.

DOMINO'S PIZZA

Amongst an endless sea of fast food companies, Domino's Pizza has managed to create an unwavering presence and an even more unshakable hold over pizza and how it is viewed and consumed.

At first glance, Domino's Pizza is nothing but a fast food restaurant specializing in pizza making. A deeper look would expose that it is actually a supply chain operator and consumer marketing firm that has single-handedly colonized pizza and, as such, the hearts of the millions who love the dish.

This ever-evolving company not only capitalizes on pizza and its reputation as the most loved fast food in the world. It also leverages the growth of modern technologies and the

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

expansion of its operations to various locations.

This approach to the pizza industry is the reason why the omnipresent Domino's Pizza has an estimated 18,800 stores across 90 locations and delivers about 3 million pizzas per day.

This feat was not achieved in a day but rather as a result of 61 years of work and consistency, putting a proverbial feather in the hat of the old saying "Rome wasn't built in a day".

Domino’s Historical Success

With a net income of USD 491.296 million and total equity of USD 3.3 billion, Domino’s Pizza presents itself as quite a success story.

In the year 1960, two brothers, Tom Monaghan and James Monaghan, took control of a little restaurant owned by Dominick DeVarti, at 507 Cross Street (now 301 West Cross Street) in Ypsilanti, Michigan, near Eastern Michigan University, originally named DomiNick's. They rented the restaurant, but, in order to fulfill a larger dream later, borrowed $500 to buy the store.

The brothers ran the pizzeria for a year before James traded his half of the business to Tom for a Volkswagen Beetle, which they used for delivering pizza in 1961. This trade made Tom the sole owner of the enterprise.

As the sole proprietor, Tom sought to change the name of the enterprise, as the former owner of the restaurant disagreed with him continuing to use the name DomiNick's. The name Domino’s was suggested by a Pizza boy (Jim Kennedy) after one of his deliveries, and he loved it. In 1965, Tom officially changed the enterprise's name to the iconic Domino’s Pizza we now know.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

In 1967, Domino's Pizza opened its first franchise in Ypsilanti, Michigan, and by 1978 opened its 200th store in the U.S. After its success in the U.S., Domino's opened its first international store in Manitoba, Canada, in 1983. By 1985, It opened stores in Luton, in the UK, and Japan. As of 1997, Domino's had opened 1,500 stores worldwide, even going as far as opening five stores on five continents in 24 hours.

After 38 years in the pizza industry, Tom Monaghan announced his retirement and removed himself from the day-to-day running of the company. He sold 93% of the company to a private firm called Bain Capital for $1 billion. Dave Brandon was then named CEO of the enterprise.

In 2004, the company went public and was listed on the New York Stock Exchange, raising about $339million through its first IPO.

By 2013, it introduced the first vegan pizza to the world at a store in Israel. By 2018, it sold the most pizza in the world and had stores across America, Asia, Europe, the Middle East, and Africa.

Today the CEO of the company is Richard E. Allison Jr. and its headquarters are in Ann Arbor, Michigan. It boasts over 350,000 employees and more than 10,000 delivery providers.

Domino's now owns its own online ordering facilities to deal with the numerous number of consumers who patronize them. These facilities give consumers numerous ways to order.

About 50% of Domino's Pizza's orders come from online facilities or wearable devices that allow them to order. With 75% of the international community ordering, the company now experiments with automated doorstep delivery using

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

robots and drones.

Domino’s Pizza's Business Model

For a super enterprise, Domino's Pizza is a relatively simple one, as they either sell pizza online or are running franchise stores to sell Pizza to customers.

A deeper dive into the company's business model and one would discover, although mislabelled as a successful restaurant chain, Domino's Pizza is a successful supply chain operator and consumer marketing firm.

In the U.S., the company owns 2% of its stores, rather its revenue is generated from franchise royalties and its supply chain operation. Essentially this means a majority of Domino's revenue comes from its sales and franchise product sales (e.g. branded shirts, toys, and such).

The franchise model is most beneficial to investors as it enables the company to efficiently manage capital and, as such, sustain enough flexibility to pursue stronger growth opportunities. Due to this, the company's store count increased from 11,629 in 2014 to 18,848 in 2021.

Domino's business model requires the company to take control of the production line from start to finish. A majority of the company's success as a franchise is due to the fact that it has absolute control over its product quality and consumers' experience from start to finish.

The initial supply chain is overseen by the company, ensuring only the best-quality ingredients are provided and sourced at competitive prices. This allows the franchise to focus on other parts of the business. For example, the fact that Domino's delivers mixed dough and other ready-made ingredients needed to their stores result in saved time for the store operators as the preparatory time is cut and can be funneled

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

into other aspects like sales.

Besides the supply chain, over 95% of the company's employees started as drivers or in-store employees.

This is because the company requires franchisees to have extensive knowledge of the work ethics and culture of the company. This also ensures all employees have acceptable managerial experience.

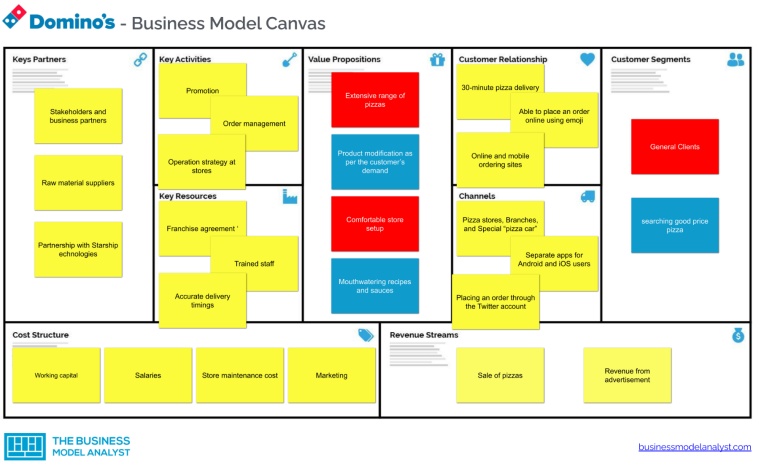

By being selective, the company protects its brand from scorn and defamation by employing those who understand and uphold the business model and culture to head stores, branches, and sorts. Hence, only the best can thrive.

Finally, Domino's operates with an elaborate and efficient delivery system, ensuring every customer gets a hot, quality product delivered to them in a timely, stressless, easy fashion.

By controlling every step of the company's production line, Domino's successfully eliminates any form of cost inefficiencies and upholds consistent quality across the whole business.

Domino’s Pizza's Business Model Canvas

Customer Segments

Domino's Pizza offers its services and products to a massive and diverse customer base worldwide.

The brands' target audience is divided into different segments to ensure effective handling of each customer segment.

Younger customers

This segment covers individuals between the ages of 18 and 35. This segment generates a large amount of business for the company. They are also the segment most related to the brand's image, as they make up a large portion of society and are the most active.

This segment is also most open to information and is the major target of marketing campaigns.

Working professionals

People in the job industry and families who frequently require

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

a time-efficient, stress-free, and affordable meal option make up this segment.

Event organizers

Event organizers: This segment covers the people who set up and those who are involved in planning events, outings, and meetings like birthdays, weddings, and concerts.

To reach the audience, the brand spends millions on effective marketing campaigns that target its target audience. They also run marketing campaigns that offer huge discounts and deals on tickets to mega-events. This helps boost sales and increases overall brand acceptance and value across the globe.

Value Propositions

As a brand and company, Domino's Pizza has created a multitude of ways to offer value to its customers, such as:

Brand Building and Reputation

As one of the largest and most popular food chains running around the globe, Domino's Pizza plays an active role in its brand-building process.

It actively monitors and ensures its products are consistent in taste. Due to the variety of food options, it offers to its customers, this process is done to ensure its reputation for offering its customers high-quality products quickly and efficiently is untarnished.

Supply Chain

Domino’s Pizza as a company oversees every aspect of the production line using a vertical supply chain that is integrated from manufacturing to delivery. For example, Domino's has an integrated dough manufacturing and supply chain system

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

that ensures the quality, consistency, and efficiency of franchise products worldwide.

International Reach

with a solidified presence in the fast food business in 90 different countries, including countries in America, Asia, Europe, the Middle East, and Africa. Domino's Pizza has an international reach that allows the company to expand easily and provide its products to a broad and diverse customer base from all parts of the world.

The company now boasts about 16,000 outlets across the world serving quality food to numerous customers across the world, ensuring no matter where you travel in the world, you can always trust a Domino’s is waiting for you with the same efficient and consistent taste we've all come to love.

Ease and Accessibility

Domino's Pizza allows customers to order their products from anywhere in the world in whatever fashion suits them best at that moment.

Customers can walk into any of the 16,000 locations worldwide and place an order, which can then be eaten in-store or taken out to a takeaway.

The brand allows customers to place orders online through dedicated apps, numbers, and websites. Most U.S. adults order pizza online due to its convenience and speed. This system essentially allows anyone to order from anywhere they find themselves without having to get up. As of 2018, 50% of all Domino's orders were made online.

Innovation

Domino’s is a company that is specialized in creating new

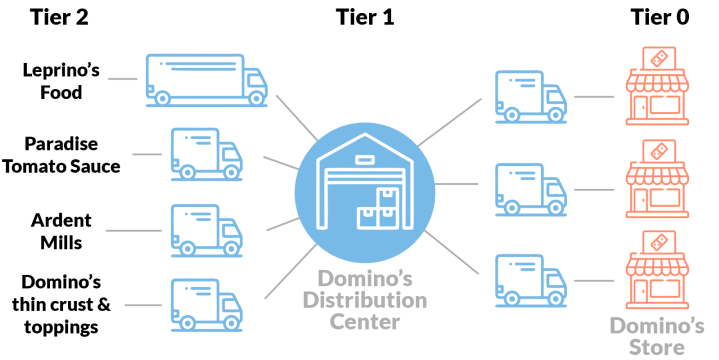

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

recipes, toppings, and many other pizza-related innovations. This ensures the company is always coming up with something new to attract the attention of its target audience and enriches the options available to its customers. For example, in Israel in 2013, Domino's Pizza introduced a new vegetarian pizza using soy-based topping and vegetables.

Domino's also provides other food items like tacos, chizzas, and many more, which are also delicious.

Domino's essentially continues to find new ways to take care of its customers and provide them with the best and most creative meals.

Channels

As a world-renowned fast food enterprise, Domino's Pizza has a reputation for always offering consistent, high-quality meals.

This is due to the thorough supervision that follows the ingredients from manufacturing to delivery. The company assumes responsibility for manufacturing, purchasing, and

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

delivering cost-effective, high-quality ingredients for its franchise stores. This is to eliminate cost inefficiencies and low-quality products, as well as to save preparation time that should be used for sales.

Domino's Pizza's sales operations are supported by its own manufacturing, distributing, compromising dough facilities, supply chain center, and storing facilities.

So no matter how or where you order a customer across their 16, 000 franchise stores, they will get the same quality meal delivered to them.

Key Partners

In order to achieve and maintain its level of success, Domino's has positioned itself to work with various partners to help with its growth as a company.

- **Vendors:** These are people or companies offering something for sale to other companies or people.

  Domino's has four major vendors who supply it with the necessary food items needed for its operations. These vendors are Leprino's Food, Paradise Tomatoes, Ardent Mills, and Domino's thin crust bread manufacturing distribution center.

- **Franchise partners:** These are limited liability companies or limited partnerships in which the borrower owns an equity interest pursuant to the franchise partner program.

  This simply means Domino’s has licensing agreements with different partners and business owners to open franchises across the world. More than 95% of Domino's franchisees in the U.S. started off as part-time pizza makers or delivery drivers. This is

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

because Domino’s focuses on building excellence around its team members and franchisees

Much of Domino's success is a result of its franchise business model, which is essentially an internally based franchise system.

- **Marketing partner:** Domino’s also holds strategic collaborations with other businesses to help their marketing campaign.

  For example, Domino's partnered with a virgin wine club in an effort to appeal to a wider range of audiences by offering an up-market dining experience.

- **Strategic partners:** These are companies and businesses that Domino's has aligned itself to in order to easily reach a targeted goal.

  For example, Domino's partnered with the hit Netflix series, Stranger Things, to create an app that allows users to order pizza with their minds, as well as explore the series' intricate world.

  This partnership hence benefits both sides by drawing customers to them.

All these partners play an important role in the success of the enterprise, as they all bring something different and necessary to the company and its products.

Customer Relationship

As a company, Domino's greatest interest is to offer quality food and impeccable customer service.

At the store level, the enterprise provides quality restaurants where customers can order directly from staff and get their products delivered hand to hand.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

They also offer a 30-minute food delivery guarantee service to all customers who order away from the store. This guaranteed service attracts a lot of customers as they can be sure of their meal's arrival time.

Customer queries and complaints are also handled with the utmost care and efficiency in order to keep their customer base happy and loyal. These complaints range from troubling complaints to advice on menu items; nothing is considered irrelevant. These complaints can be submitted in a number of ways, like phone calls, texts, emails, etc.

Besides the marketing campaign, Domino’s also provides offers and coupons to their regular customers as an encouragement to patronize them more and as a form of appreciation for their patronage. This in turn creates trust between the buyer and the seller.

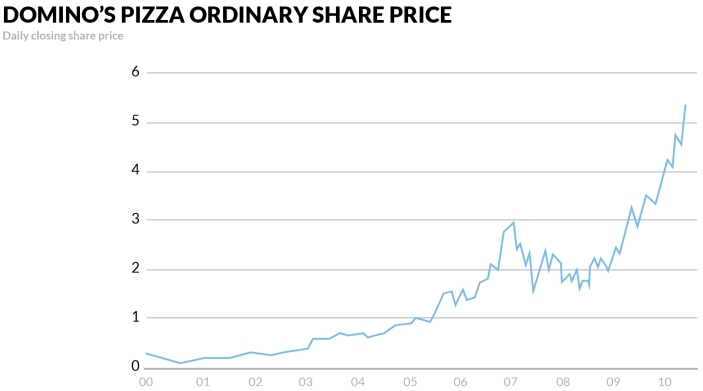

Customers are eligible to access deals, discounts, and special promotions in exchange for their loyalty.

The company also offers a large range of ready-made information on its website to help curious customers easily find their required information. This includes but is not limited to information about stores, promotions, and menus.

As a way to further reach out to customers and stay up to date with current trends, the company maintains a steady presence on social media platforms such as Facebook, Instagram, Twitter, and YouTube.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com

Cost Structure

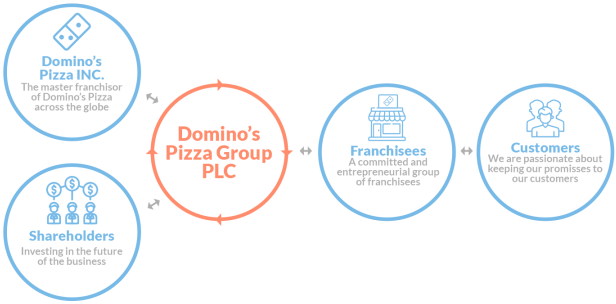

In 2019, Domino's Pizza managed a global retail sale of over $14.3 billion, with over $7 billion coming from the U.S. and nearly $7.3 billion coming internationally in the 4th quarter of the year. At present, Domino's has a retail sales volume of over $4.5 billion, with over $2.2 billion in the U.S. and over $2.3 billion internationally.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Revenue Sources

BUSINESS STRUCTURE

As expected, Domino's generates its revenue from the sale of pizza worldwide. The revenue is gotten in the form of sales, which are collected from customers at the point of sale. This means the revenue is collected wherever the sales take place, be it through online sales channels, in a franchise store, or at your doorstep.

Besides the sales of pizza, revenue is also made from the collection of franchises, royalties, and fees from franchisees.

Alongside the pizza sale and royalty fee, Domino's also generates revenue from advertisements and sponsorships. This is the second-largest source of revenue, since its app has numerous downloads.

In 2018, Domino's Pizza generated a total revenue of $3.34 billion, which was higher than the revenue generated the year before.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

How does Domino’s generate its revenue?
Domino's operates mainly as a franchise business, which means it doesn't run the entire business on its own, but rather relies on the use of a large number of franchises worldwide. They only operate a small number of company-owned stores.

Besides operating their stores to generate revenue, Domino's operates in this manner in order to carry out experiments with little to no damage risk.

These stores work as test sites that the company can use for testing technological innovation, marketing strategies and promotions, as well as operational improvement. These stores are also used to train prospective franchisees and employees. If the test proves successful, the innovation or strategy is implemented system-wide.

Approximately 98% of the company's stores are operated as franchises. One might think franchise royalties and fees are the largest contributors to the company's revenue. However, that is false as the company's largest revenue source is its supply chain segment.

Domino's operates a large supply chain to fulfill the needs of the U.S. and Canada-based franchises. The food and ingredients sold to the franchise in these two markets are its largest source of income.

The company's second-largest revenue comes from the collection of royalties and fees from franchisees, both domestic and international. Apart from these fees, the franchisees also pay a small technological fee to the company

Business Segments of Domino’s: Sources of Income
In order to function effectively and cost-efficiently, Domino's divided its business into 3 main operating segments:

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Domino’s U.S., Domino's International, and Domino’s supply chain

The company's supply chain operates as a separate business segment and provides the largest source of revenue for the company.

These segments are made to help the company organize Domino’s business model that relies on franchisees that run in the U.S. and internationally, as only a handful are company-owned stores.

According to its 2020 Annual report,

“Domino’s generates revenues and earnings by charging royalties and fees to our independent franchisees. We also generate revenues and earnings by selling food, equipment, and supplies to franchisees primarily in the U.S. and Canada, and by operating a number of company-owned stores in the U.S. Franchisees profit by selling pizza and other complementary items to their local customers. In our international markets, we generally grant geographical rights to the Domino’s Pizza brand to master franchisees. These master franchisees are charged with developing their geographical area, and they can profit by sub-franchising and selling food and equipment to those sub-franchisees, as well as by running pizza stores directly. Everyone in the system can benefit, including the end consumer, who can feed their family conveniently and economically. "

Domino’s Annual Report, 2020.

Domino’s U.S.

This segment includes both franchise stores and company-owned and operated stores in the U.S. As of 2020, there were about 6,355 Domino’s stores in the U.S. 363 of these stores were company owned, while 5,992 were

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

franchise stores. This meant about 94% of the U.S.-based stores were franchise stores.

The franchisees of these stores were charged royalties and fees by the company. Based on net revenue, this segment is the second-largest segment of the company. In 2020, it generated $1.45 billion in net revenue, making up about 35% of the company's total net revenue.

The United States remains the largest market for Domino's and accounts for the largest part of its revenue.

Domino's applies thorough training and standards to its screening for U.S.-based franchisees. The company requires its franchisees to manage one store for at least one year and pass Domino’s management school program before they can franchise.

Almost all of the company's existing U.S. franchisees began as delivery partners or in-store employees. This has helped the franchisees understand the company's ethics and business operations.

In this way, the company can monitor and verify the operational and financial performance of each franchise.

The company enters into a 10-year contract with franchisees that is renewable. The contract renewal rate as of 2020 was approximately 99%, which shows a great degree of satisfaction among the franchisees.

The franchisees are to pay a 5.5% royalty on sales, apart from some technology-based fees. If any franchise fails to make the required payment or breaches its contract in any way, The company retains the right to terminate the franchise.

The franchise also pays a small fee to contribute to the

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

company's non-profit national marketing campaign-producing subsidiary called Domino's National Advertising Funds (DNAF). These funds are used for marketing campaigns and advertising, in order to grow the customer base

The U.S. segment of Domino's operations generates revenue from U.S. company-owned stores, U.S. franchise royalties and fees, and U.S. franchisee advertising.

Domino's International

According to net revenue, this is the smallest segment of Domino's. In 2020, it generated $249.8 million in net revenue, which comes to 6% of the net consolidated revenues of the company. At the beginning of 2021, the company had 11,289 franchised stores operating internationally.

The international franchise segment of the company is made up of a large, interconnected network of franchisees across 90 different countries. The main source of revenue for this segment is the royalties and fees paid to the company. They also pay a small technologically-based fee to the company.

Basically, the standards of operation for franchisees are the same worldwide. However, specific regions may implement some changes on a regional basis. This is to adapt to cater to the regional eating habits and customer preferences that vary across the globe. Due to this, the international franchise operating model is flexible and made to adapt to the needs of the franchise and its customers.

A majority of the international franchises are currently operating under the master franchise agreement. Seven out of ten of Domino's Pizza Company's largest international markets are operated by a master franchise. For example, Jubilant Food Companies in India and Dash Brands in China

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

are master franchise companies operating Domino's businesses in the respective markets.

The master franchisees are in charge of the franchise and distribution rights for the entire market or countries. In some select markets, the company also franchises directly to individual store operators. Each master franchisee must have sufficient knowledge of the local market in order to establish and develop Domino's stores in that area. They must also have the ability to identify and access targeted real estate locations, as well as sufficient expertise in local laws, customs, culture, and consumer behavior. As this would not only help the company thrive in such areas but also help it avoid infringement of the law and customs of such a place, it would also help capture the hearts of the individuals in that location.

Apart from that, the company requires its candidates to have access to sufficient capital in order to meet the growth and development targets of the company.

Master franchise agreements are generally formed for ten years. The master franchisees can renew their terms for additional terms if they choose to. These agreements generally include growth clauses requiring franchisees to open a required number of stores within a specified time period. The master franchisee must pay a one-time initial franchise fee and an additional franchise fee with the opening of every new store.

The master franchisee is required to pay royalty fees. These fees were approximately 2.9% of sales as of 2020. The company made agreements with some of its international franchisees related to technology fees.

In 2020, the revenues from international franchise operations

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

increased by 3.6%, or $8.8 million. The net revenue from the international franchise segment increased to $249.8 million in 2020 from $241 million in 2019.

Supply Chain

The supply chain segment of Domino's is the largest segment of the company. It accounted for 59% of the company's revenues in 2020 and generated $2.42 billion in net revenues in 2020. The company operated 21 regional dough manufacturing and supply chain centers, two thin-crust manufacturing facilities, and one vegetable processing center in the United States. The company also operates five dough manufacturing and supply chain centers in the United States. The supply chain segment has a fleet of 900 leased tractors and trailers.

The supply chain takes responsibility for providing important food items to the franchisees and, as such, watches over the quality of products and ensures that the food items are cost-effective.

Apart from manufacturing sites, the dough manufacturing, and supply chain centers of the company act as storage sites. Hence, materials that are sourced from other materials are stored here after they have been purchased. Domino's regularly supplies more than 6,800 stores with various foods and supplies.

KIWIBOT

Kiwibot is a robotic food delivery system that currently delivers food in California, U.S. It is the brainchild of Kiwi Campus, a Colombian-owned startup company providing food services in California, U.S.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

The company started in 2017 at the University of California, Berkeley. Now, it delivers food to parts of the city of Berkeley, the Stanford University campus in Palo Alto, and in San Jose.

Kiwi Campus grew out of a courier delivery service started by Felipe Chávez, the CEO, in 2015 in Bogotá. In 2016, he founded the current company with CTO Jason Oviedo and COO Sergio Pachón in the University of California, Berkeley's Skydeck business incubator.

The company tries to incorporate robotics into the delivery process by replacing the human delivery men with active robots who would bring the ordered food to the customer's doorstep.

Kiwi uses three types of robots to ensure safe delivery: one to collect prepared food orders from the restaurant, then a semi-autonomous tricycle to sort out orders and arrange them. This tricycle carries the food most of the way to its delivery point, before a small four-wheeled "Kiwibot", which can carry up to five orders, navigates the last approximately 300 meters to the customer. An automated tricycle can carry four Kiwibots at a time, which equals 20 orders per run. The company claims an average delivery time of 27 minutes. The Kiwibots have digitally animated eyes that respond to customer gestures to cause the hatch enclosing the orders to open.

Kiwibot Business Model

Kiwibot executives can be said to be at the forefront of a new market development as more students incorporate the use of autonomous delivery into their daily lives.

The Kiwibot semi-autonomous robots provide never-before-seen in-field customer care and integration with any company's point-of-sale system. Hence, making Kiwibot

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

an invaluable asset in the food distribution market.

The company is focusing on university campuses as these are popular locations for entrepreneurs developing autonomous systems

The university setting is also fairly easy to navigate, as there is a lack of complexity seen in public infrastructure and a lower level of automobile traffic congestion.

The company aims to construct the most sophisticated fleet in the world with 100 robots a month, expanding to exciting new destinations and collaborating with new partners, institutions, and authorities to enhance safe and fair mobility with zero-emission solutions.

With the market newly developing, the company is set to become one of the giants in the market as its technology improves.

IMPERFECT FOODS

Imperfect Foods is an online grocery delivery company whose mission is to eliminate food waste and build a better food system. The USDA estimated that loss and waste from the food supply at the retail and consumer levels in 2010 was 31%, equaling 133 billion pounds. By 2019, according to research by the nonprofit ReFed, a whopping 35% of all food in the U.S. went unsold or uneaten. That's the equivalent of about 2% of the entire U.S. GDP — $408 billion worth of food.

Imperfect Food aims to prevent food waste by selling food items that are in perfect condition but would otherwise be wasted due to one mishap or another. This food item that would have been wasted comes from the surplus of food items. These are the items that did not quite meet the

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

cosmetic appeal standards of retailers, but are perfect for human consumption. For example, salmon that are not the right shape and size for exotic items that would have been discarded are purchased and sold to regular consumers who do not need the previously stated appearance standard.

Customers sign up for Imperfect Foods through a weekly subscription through Imperfect's website. Customers can then review their suggested order, add or remove items, and then Imperfect Foods delivers the groceries directly to their door

History of Imperfect Foods

The initial foundation for Imperfect Foods was set by Ben Simon, an anti-food waste enthusiast in his college days, when he founded the Food Recovery Network as a means of connecting local hunger-fighting nonprofit organizations with unconsumed cafeteria food that would have otherwise been thrown into his school's dumpster.

During his years growing the Food Recovery Network to campuses nationwide, Ben Simon befriended Ben Chesler, and the two of them later co-founded Imperfect Produce.

They had a mission to tackle the food waste problem of the globe from where it started. Their major targets were farms and fields, where perfectly nutritious food items are discarded and not sent to stores because they do not pass the required cosmetic appeal that stores nationwide look for.

About 20% of farm produce is lost to this screening and goes to waste before leaving the farm. This was the basis for the Imperfect goal. It was to eradicate the waste of perfectly good food items by acquiring and selling them to customers who do not need the cosmetic appeal of retail stores, restaurants, and such.

Imperfect Foods Business Model

Imperfect Foods relies on the education of the public on how much food is lost to waste due to one cosmetic anomaly or the other. The company structured itself in such a manner that the average consumer can go through a plethora of recovered foodstuffs and come to a conclusion by themselves on what is worth buying and saving. Like any other e-market, customers are won over by Imperfect's cost savings, convenience, and also waste reduction.

The company has now expanded into 14 cities, with thousands of people on board with the movement.

The company also partnered with food banks to help fight world hunger. In total, the company donates thousands of pounds of produce weekly and has donated over 1.7 million pounds of produce to date.

Imperfect Foods aims to deliver food to every state in the United States and cut down on the amount of food that goes to waste. They aim to serve as a bridge between people and products that would have otherwise gone to waste due to mishaps that in no way tarnish the viability of the products, for example, silly packaging or nearing expiry date.

MCDONALD'S

With about 40,031 restaurants across 119 countries as of 2021, McDonald's stands as one of the world's largest multinational fast food chains to ever exist.

By revenue generation, it is the largest restaurant chain in the world. In 2021, it served over a 69million customers across 100 countries. This large number of orders is facilitated by its more than 40,000 outlets that are open for patronage.

They are best known worldwide for their hamburgers, cheeseburgers, and French fries, although their menu also includes chicken, fish, fruit, and salad. The company is also home to some of the most iconic and famous licensed food, such as the Big Mac and the McFlurry.

A brief history of McDonald's

McDonald's was the creation of two brothers, Richard James (Dick) and Maurice James (Mac) Mcdonald. The two brothers opened the first McDonald's at 1398 North E Street at West 14th Street in San Bernardino, California (at 34.1255°N 117.2946°W), on May 15, 1940.

In 1948, the brothers introduced their "Speedee Service System". It functioned to widen the use and scope of principles used by fast-food restaurants at the time. These principles had been used by predecessors such as White Castle more than 20 years earlier and were now adapted to fit in with the times on a more effective and efficient note.

This system caught the eye of Ray Kroc, who was impressed by the business and the business model used by the brothers. He would become their first franchise agent and open the first franchise in 1955. At this point, the brothers had already set up nine operating restaurants.

Ray Kroc was a native Chicagoan. In 1939, he was the exclusive distributor of a milkshake mixing machine, called Multimixer. He walked as a salesman and the Mcdonald brother were one of his clients.

Ray Kroc would go on to work with the brothers for 6 years as the business grew due to its insistence on offering quick service and delivery of products of consistent quality. In 1961, impressed by the business growth. Ray bought the brothers' share of the business for $2.7 million dollars and began the company's worldwide conquest.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

On May 4, 1961, after Ray Kroc bought the business. McDonald's filed for a U.S. trademark on the name "McDonald's" with the description "Drive-In Restaurant Services", which it continues to renew to this day. By the 13 of September, Ray also applied for a trademark logo. This logo would be the iconic overlapping, double-arched "M" symbol known worldwide. Although the "Golden Arches" logo has appeared in various forms, the current iteration was not used until November 18, 1968.

As McDonald's expanded into a multitude of international markets, the company became a symbol of globalization and a testament to the American way of life. This together contributed to its growth as it continued to spread its quick services and quality food products across the world.

McDonald's Business Model

As of 2021, McDonald's became the most valuable QSR brand in the world, with a brand value of $154.9 billion and worldwide revenue of $23 billion.

From these stats, it is easy to infer that McDonald's business model works as an efficient revenue-generating machine. The business model focuses primarily on franchising

This restaurant model is not particularly exclusive to McDonald's as it is practiced by a number of fast-food chains such as KFC, Taco Bell, Wendy's, Domino's, Subway, Starbucks, and Burger King.

McDonald's proficiency in the business model stands as the main difference between it and other businesses. It is regarded as one of the most valuable fast-food chains in the world, and it is consistently regarded as one of the market segment's leaders in terms of innovation, brand recognition, overall sales, and restaurant growth worldwide.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

In 2021, over 56% of their total revenue came from franchised restaurants. This is because McDonald's practices a heavily franchised business model. This means the business depends majorly on franchising as a source of revenue generation.

As of 2020, 93% of the total McDonald's restaurants were franchises. The company generated over $23 billion in revenue in 2021, of which $9.78 billion was from owned restaurants and $13 billion from franchised restaurants.

The combination of franchising and a product delivered differently (the "speedy system") made for a whole new experience. That made it a new business model: the heavily franchised McDonald's business model.

Franchisization of McDonald's

According to Mcdonald's annual reports:

McDonald's is primarily a franchisor and believes franchising is paramount to delivering great-tasting food, locally relevant customer experiences, and driving profitability. Franchising enables an individual to be his or her own employer and maintain control over all employment-related matters, marketing, and pricing decisions, while also benefiting from the financial strength and global experience of McDonald's. However, directly operating restaurants is important to being a credible franchisor and provides company personnel with restaurant operations experience.

McDonald's practices a heavy franchise. In fact, McDonald's has found a balance that enables it to have a large percentage of restaurants franchised. These restaurants are owned by individuals who work under McDonald's name to distribute McDonald's products and services. These franchises are obligated to pay a minimum rent for a 20-year

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

period and a certain amount of royalties and fees to McDonald’s in exchange for their existence.

McDonald’s as per their contract agreement. Therefore, the franchisee, even if it is owned by an “independent restaurateur", is locked into McDonald’s growth plan.

This allows for the easy growth of McDonald’s businesses as well as the rapid growth of the businesses and franchises. This also makes McDonald's, to a certain degree, a real estate company, as they own the land each franchise sits on.

On the other hand, McDonald’s keeps a small percentage of owned restaurants primarily for product development, the development of new workflows, and experimentation. When things work out at these stores, these same strategies might be applied back to the other franchised restaurants worldwide.

This system allows for rapid growth and success of the business because a failure in one franchise can be used to teach others around the world. It also ensures that McDonald’s can easily create a strong presence for themselves in any international location they choose to open a franchise in.

Why is McDonald’s transitioning to a heavily franchised business model?

The transition to a more heavily franchised business model is part of the long-term company’s strategy.

McDonald’s stands to gain a lot from the heavy franchise business model. This is because this business model allows for rapid business growth both locally and internationally. As multiple franchises can be opened in any given location, the heavy franchise business model also allows for the brand's

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

name to grow rapidly as it can easily colonize any location where it finds itself.

McDonald’s heavy franchise business model requires the company to secure the land or the rental contract for the land that is used for opening a franchise at any given location. This model hence smartly helps McDonald’s to keep control over the land and/or long-term leases in order to leverage its market position to negotiate deals. At the same time, this kind of deal serves as an alignment between the company and its franchisees.

This essentially means the model ensures that McDonald’s can build franchises in the fastest and most cost-effective manner possible.

The franchisee also pays for the signs and interior decor of the restaurant, while getting innovative and operational help from their parent company. These fees are in addition to the royalties and 20 years of rent that must be paid to the company.

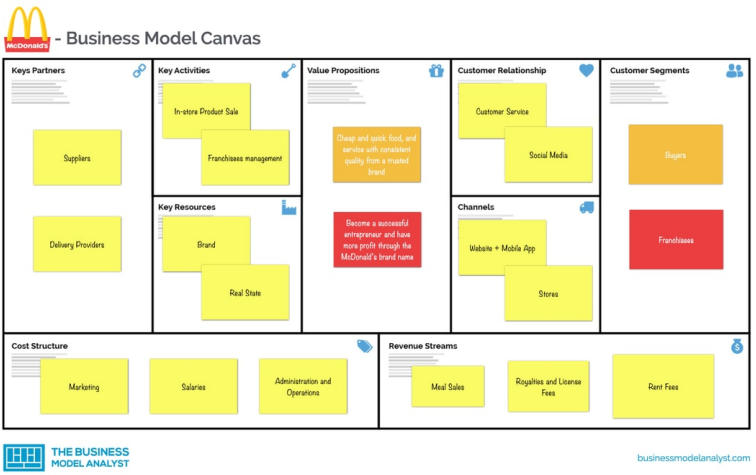

In a way, it is almost like McDonald’s is introducing a subscription business model, where franchisees pay a fixed amount each month. That makes McDonald’s income more stable over time.

This structure ensures that McDonald's' revenue stream is stable and predictable while maintaining profitability amidst low operational costs.

McDonald’s Business Model Canvas

The diagram below is a pictorial learning aid for McDonald’s Business Model Canvas:

McDonald’s segments

At the qualitative level, the segments can be organized into four main ones:

The U.S.

This consists of franchises and company-owned stores located in the United States. As of 2018, it represented the most significant market. This segment focuses on the innovation, management, and structural development of franchises and company-owned stores located in the United States. It focuses on the monitoring and management of the United States branch of the McDonald's company.

International Lead Markets

This segment consists of leading markets around the world under the McDonald's brand name. This focuses on the leading international markets in terms of innovation, brand

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

recognition, overall sales, and growth.

This segment includes but is not restricted to Australia, Canada, France, Germany, the UK, and related markets.

High Growth Markets

This segment has growth potential around the world. This segment is focused on monitoring locations that are on the verge of creating situations that would benefit the company. For example, China, Italy, Korea, the Netherlands, Poland, Russia, Spain, Switzerland, and related markets.

Foundational Markets & Corporate

This segment focuses on monitoring and managing the remaining markets in the McDonald's system, most of which operate under a primarily franchised model.

These segments exist to ensure every franchised and company-owned store is accounted for. It also helps target specific locations and positions the company in the best profit-making location at all times. It also helps monitor the growth of businesses across the world and find areas of concern that need attention.

As the business model focuses heavily on franchising, these segments help keep them in check and discover ways to improve revenue generation in those specific regions.

As of 2017, the U.S., International Lead Markets, and High Growth Markets accounted for 35%, 32%, and 24% of total revenues, respectively.

McDonald's Customer Segments

McDonald's divides its customers into 2 distinctive groups, namely:

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

- **Buyers:** This segment encompasses individuals, groups, and associations who are interested in purchasing products such as hamburgers, French fries, etc., from McDonald's.

  This segment is made up of everyday individuals looking for a meal or food products to host a meeting. This includes and isn't restricted to youths, working professionals, and event organizers.

  This, compared to franchises, generates a smaller but significant amount of revenue. Only a small percentage of McDonald's outlets are company owned. A majority exist as franchises. Revenue from this segment is primarily generated from sales.

- **Franchise:** This consists of restaurants and businesses willing to increase their sales by using the McDonald's brand name.

  Revenue from this segment is generated by royalties and agreed-upon fees.

  McDonald's in turn provides a brand name along with innovative, managerial, and structural assistance as well as advertising for the partnered restaurant that now bears their brand name.

These segments exist to allow the company to monitor its source of revenue and create a sense of stability in its income and expected income. It also helps to understand the effects of certain experiments on their overall sales and to analyze problems that may have arisen.

McDonald's Value Propositions

- **Buyers:** Customers around the world are treated to

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

quality products as well as quick services from trusted brands. This is regardless of the franchise, as they are all under one brand umbrella.

In order to live up to their expected quality of service, the company handles customers' queries and complaints as a priority in order to improve their services regardless of the franchise or location.

- **Franchises:** Offering up their brand name, McDonald's helps to increase the profit of entrepreneurs who open franchises with them.

  The company also secures structural, managerial, and innovative assistance to entrepreneurs. This is to maximize the profit made from the franchise.

  The company also provides advertising to a large and diverse audience. This in turn boosts the sales and profit of the franchise.

McDonald's Channels

For ease of customers and franchises, McDonald's created a number of channels to gain access to their products, such as:

- **Website:** McDonald's has a state-of-the-art website that can be accessed from any location in the world. Individuals can make orders for any available McDonald's products simply by using the website. Hence, the business merged the comfort of the Internet with its quality products and quick services.

  The company also offers a large range of ready-made information on its website to help curious customers easily find their required information. This includes but is not limited to information about stores, menus, promotions, and community service.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

- **Apps:** Besides the website, the company owns a designated mobile application that can be used to order any of its products. Since almost everyone owns a mobile phone, the company has made ordering any of its products easy and stressless. The apps can be downloaded on Google Play Store or iOS App Store.

- **Franchises and stores:** As one of the most obvious channels of ordering for products. The company has a total of about 40,031 quality outlets located in 118 countries around the world. Each of these outlets is open and available for customers to directly order products and enjoy a quality meal either within the premises or outside with a takeaway.

Mcdonald's Customer Relationships

In order to keep up sales and provide impeccable service to their customers, McDonald's has to keep a tight and positive relationship with them. This is done by the following methods:

- **Social media:** McDonald's keeps an active, up-to-date social media presence on social media platforms like Facebook, Instagram, Facebook, and YouTube.

  This helps the brand stay up to date on the latest trends. This in turn allows the brand to reach out to its customers on a more personal, lively, and engaging basis. It also allows the brand to capitalize on trends through marketing campaigns.

- **Customer service:** In order to improve their services, McDonald's has to take into account every customer's queries and complaints. In order to handle this task, it implemented a high-quality customer service system that responds to every customer's opinion.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

This customer service can be reached by phone, email, letter, social media, etc. This is so that every complaint can be accounted for and acted upon accordingly. This creates trust and mutual understanding between buyers and sellers, which ultimately manifests itself as customer loyalty.

- **Community service:** As a company, McDonald's is required to return to the community in one way or another. The company takes the improvement of its community as a principal task, as it also works as a way of attracting publicity to the brand.

  In 2022, McDonald's donated $5 million to the Employee Assistance Fund and supported relief efforts led by the International Red Cross in response to the recent developments in Ukraine and the resulting humanitarian crisis in Europe.

  The company, in partnership with other franchises, worked together to give out free "thank you meals" to health workers and first responders. It also established a partnership with the Obama Foundation to support the Obama Presidential Center in our shared hometown, as well as its global programming and local Chicago initiatives, by donating $5 million over two years (2022–2023).

  The company also owns a subsidiary called Ronald McDonald House Charities® (RMHC®), which helps raise funds for charities. In total, McDonald's, their franchisees, and customers donated over $168 million to RMHC in 2021, helping the charity provide more than 1.8 million overnight stays for RMHC families around the world. As well as donated $20 million as part of our five-year, $100 million commitment to support families when they need it most.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

The company also supported approximately 1.3 million young people with training programs and job opportunities since launching the Youth Opportunity program in 2018.

Each of these methods exists to assist businesses in developing stronger and more positive interpersonal relationships with their customers and instilling a sense of loyalty in them.

McDonald's Revenue Streams

McDonald's revenue comes in a number of ways, some of which include:

- **Sales:** Although this makes up a small portion of revenue, McDonald's generates revenue from sales of products in company-owned stores across the world. This revenue stream is the smallest because McDonald's business model relies heavily on franchises, and, as such, only a very small fraction of McDonald's stores are company owned;
- **Royalties:** This makes up the largest portion of the revenue generated. This revenue comes from the royalties paid by franchises to McDonald's and takes up a large portion of the revenue generated because of the considerable number of franchises affiliated with the company. In 2020, 93% of the total McDonald's stores in the world were franchises;
- **Rent Fees:** Besides royalties, the franchises are required to pay rent to McDonald's as they own the land or long-term lease of the property on which the franchise sits;
- **License Fees:** Franchises are also required to pay

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

license fees to McDonald's for using their name. This license is renewed after an agreed-upon time period.

McDonald's Key Resources

To thrive, the McDonald's business model requires some indispensable resources. Resources are the reason behind the success of the business and its rapid growth.

- **Brand:** The McDonald's brand is the life and blood of its business model. This is because the franchise depends on the success of the brand to thrive.

  The brand is the company and also the image of the company. It is the product sold to franchise agents and entrepreneurs that causes them to open McDonald's franchises.

  As of 2021, McDonald's became the most valuable QSR brand in the world, with a brand value of $154.9 billion and worldwide revenue of $23 billion.

- **Supplier Network:** These are the interconnecting networks of individuals and companies that supply McDonald's with the necessary ingredients needed to produce their iconic food items. Without these suppliers, there would be no food products to sell to the customers. Suppliers across the globe guarantee McDonald's ability to operate at a high level.

- **Real Estate:** To understand just how big the McDonald's real estate business is, as of 2021, the company reported over $41 billion in property and equipment (without counting accumulated depreciation and amortization), which makes it a mammoth commercial real estate owner.

  This is because, under McDonald's conventional

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

franchise arrangement, the company generally owns the land and building or secures a long-term lease for the restaurant location, and the franchisee pays for equipment, signs, seating, and decor. This commercial real estate portfolio well places McDonald's among the largest real estate companies in the world!

The company thus believes that, by owning the land and co-owning the franchise, it would be able to achieve an unprecedented level of restaurant success.

- **Platform:** The McDonald's business model relies heavily on advertisement and publicity. It is for such reasons that the company embarks on various marketing campaigns and community services and projects, as well as maintains a good social media presence.

McDonald's Key Activities

McDonald's operational activities can be divided into 4 different categories:

- **In-store Product Sale:** This category classifies the sales of McDonald's products to customers from within the store. This generally describes the usual In-store buying and ordering of products. This category also classifies the drive-thru system, as the products are ordered and bought at the stores. These operational activities are usually carried out by the cashiers and staff within the store.

- **Delivery:** This category encompasses the delivery of food ordered away from the store. This includes online or call. These activities are focused on delivering food to the customers who ordered them and are usually outsourced to external individuals and companies, like

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

DoorDash and UberEats.

- **Payment Processing:** Payment processing is how businesses complete credit card and debit card transactions. Payment processing services expedite card transactions, and payment gateways securely transmit data so money from a customer's issuing bank can be transferred to a merchant's account. All of this happens in seconds. The work is done by a payment processor system.

- **Innovation Testing and Implementation:** These activities are usually done by company-owned stores. It involves the trial and implementation of experimental innovations, strategies, and techniques in order to boost and improve the company's product and income.

  These techniques, innovations, and strategies are put to test at company-owned stores and monitored to see their outcomes. In the case of a positive outcome, they are incorporated across all franchises. However, in the case of a negative outcome, they are discontinued.

McDonald's Key Partners

Delivery Providers:

UberEats & DoorDash: Although they allow ordering of food online away from the store, McDonald's does not have a food delivery system of its own. To tackle this dilemma, the company partnered with food courier companies to help move their food products from the store to the delivery point of the customer. Examples of these delivery companies are DoorDash and UberEats.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Franchisees:

McDonald’s franchises around the world are run by entrepreneurs who partner with McDonald’s in order to raise the profit of their restaurants. These franchises are the soul of McDonald’s business model, as the whole model depends on the success of the franchises.

The franchises are also the highest generators of revenue for the company. These franchises also propagate the brand name and ultimately allow McDonald’s to expand rapidly while keeping a global focus.

Suppliers:

Across the world, many companies, farms, individuals, and organizations supply McDonald’s with the necessary resources to produce their food products. These suppliers are the backbone of the company as they provide the basic necessities needed for the company to create its food products. Without these suppliers, there would be no ingredients, no food products, no franchises, and no McDonald’s.

Employees:

McDonald’s continues to train individuals to work and excel in their respective fields within the company. This allows for quick services and rapid expansion opportunities, as there are always individuals ready to continue the work ethics of previous franchises in new ones. This, in turn, allows McDonald's restaurants around the world to perform at full speed.

How do McDonald’s partnerships work?

McDonald's has notoriously strict criteria for its franchisees (including net worth and liquidity). Franchisees are also

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

responsible for paying salaries, ordering supplies, and paying the rent or mortgage.

As specified in its annual report:
“Under McDonald’s conventional franchise arrangement, franchisees provide a portion of the capital required by initially investing in the equipment, signs, seating, and decor of their restaurant business, and by reinvesting in the business over time". The company generally owns the land and buildings or secures long-term leases for both company-operated and conventional franchised restaurant sites. This maintains long-term occupancy rights, helps control related costs, and assists in alignment with franchisees, enabling restaurant performance levels that are among the highest in the industry".

Essentially, McDonald’s does not only invest in the franchise, but also owns the land the franchise is on. This allows the company to be cost-effective while procuring the land during the initial phases of franchise creation. It also means that the company can repossess its land if they become uninterested in renewing the franchise leasing contract.

This approach allows the company to monitor and sanction franchises that default in one way or the other. Hence, it allows franchises and franchise owners to take a more responsible, efficient, and effective approach to running the franchise.

The initial investment for entrepreneurs in the franchise itself can be more than $2 million (depending on the location). There is then a $45,000 franchise fee, along with ongoing 4% royalties.

McDonald’s Cost Structure

The operational costs incurred by McDonald’s can be broken

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

down into 4 categories:

- **Salary:** This is the wages given to staff and managers for the work done for the company
- **Marketing:** This is the cost of marketing campaigns and advertisements that are used to draw the attention of customers. These costs are associated with promoting, selling, packaging, transferring title, and moving Joint Products to the customer and include direct costs and overhead costs;
- **Payment processing:** This is the cost incurred from the use of a payment processor to enable the financial transactions of customers from various channels such as credit cards and debit cards or bank accounts. The average credit card processing fee ranges between 1.5% and 3.5%;
- **Administration and operations:** Administrative costs are expenses an organization incurs that are not directly tied to a specific core function such as manufacturing, production, or sales. These overhead expenses are related to the organization as a whole, as opposed to individual departments or business units.

  Operational costs are the expenses that are related to the operation of a business or to the operation of a device, component, piece of equipment, or facility. They are the cost of resources used by an organization just to maintain its existence.

How McDonald’s makes money

Although McDonald's business model focuses on franchising, the company generates income through other methods, such as sales of products and app advertisements.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

However, three different types of franchising are used by McDonald’s to generate capital.

Developmental License

This type of franchise allows the entrepreneurs to set up the restaurant using their own capital to invest in it. This investment also covers operational and real estate costs.

McDonald’s then supplies the products and receives a percentage as a royalty from the sale. This royalty is separate from the determined fee the company charges every franchise that wants a license.

This type is the exact opposite of conventional franchising and is in use in more than 6,950 restaurants in over 80 countries.

Conventional Franchising

This is the most effective of McDonald's business model structures. The company secures the land or a long-term lease for the land. This land is used to build a franchise. The franchise owner would then pay a minimum rent of 20 years to McDonald’s and ongoing royalties to the company.

The franchisee also pays for the signs and interior decor of the restaurant, while getting innovative and operational help from their parent company. This is the most effective strategy because it creates a stable and predictable supply of revenue for the company while maintaining a good profit margin and low cost of operation.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Affiliates

This structure receives the lowest investment from the company and accounts for equity investments. This system allows companies to pay a percentage of sales as royalties for McDonald's products. These products include hamburgers, french fries, milkshakes, soft drinks, salads, coffee, and desserts.

This is usually done in China and Japan.

Company-Operated Restaurants

McDonald's has only a few restaurants that they own and operate. This includes hiring employees and ordering supplies themselves.

The company has a goal of having only 5% of its restaurants be company-owned, while the other 95% are owned and operated by franchisees.

McDonald's conventional franchising is its most profitable structure because it allows them to keep up to 82% of revenue generated by franchises, as opposed to company-operated, which allows only 16%.

This strategy's success in the international market has been termed "McDonaldization".

As years passed by, the McDonald's company improved on this strategy with the goal of increasing profit for its franchise and parent company. An example of these strategies is focusing on people, products, price, place, and promotion, which works together with its mission statement.

The company also worked on its growth strategy by finding ways to retain old customers, regain lost customers, and

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

convert non-customers. In 2017, this growth plan was listed as:

- Retain
- Regain
- Convert

In an effort to carry this out, they made the following changes:

- **Futuristic experience:** This was the modernization and technological upgrading of the restaurant. This changed the restaurant services for the better, making them more efficient and effective. It also improved customer acceptance and rapport with the brand;
- **Digital improvement:** The company's technological platform evolved, hence expanding the choices for how the customers ordered, paid, and served.

  This was done by adding functionality to the mobile app, use of self-ordering kiosks, and convenience-encouraging technology like curbside pick-up and table service.
- **Delivery:** The company expanded the number of restaurants around the world offering deliveries. As of now, half the world has access to food delivery from the company.

  The company also partnered with other companies, like DoorDash and UberEats, in order to expand their reach and appeal to the younger generation who prefer home delivery.

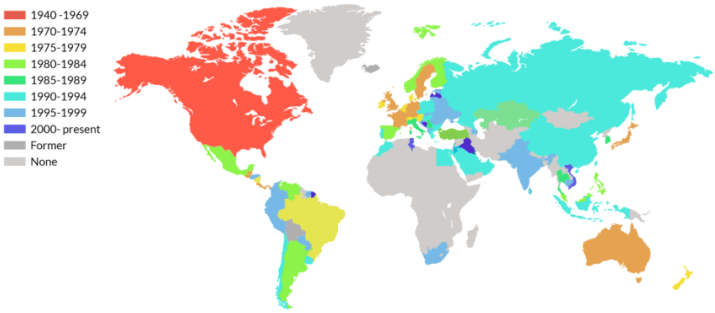

To further boost growth, they have also worked on diversity

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

with the proposition of “Diversity IS Inclusion” and the acquisition of other companies, such as Donatos Pizza in 1968, and Boston Market in 2000

Following this improvement, the company began to grow at a rapid rate, winning the hearts of the people and building a loyal fan base. The business model, coupled with quality products, quick service, and advances in technology, ultimately helped in making McDonald’s a titan in the fast-food industry.

MCDONALDIZATION WORLD MAP

BEYOND MEAT

In the past, the preference for plant-based meat substitutes was seen as nothing more than a passing fad. However, current data indicate that, what it really is, is a brand-new market that has established itself. A study conducted by Ipsos Retail Performance shows that between 2004 and 2019, the number of vegans in the United States increased from 29,000 to almost 10 million. Furthermore, 28% of consumers say they have cut back on their meat consumption, and another 14% have expressed an interest in doing the same.

In the market for plant-based meat, Beyond Meat is a significant producer. It creates meat alternatives that closely resemble the flavor and appearance of real meat. The motive for this is sort of passive proselytization to strictly non-meat diets by showing consumers that they can avoid meat without anything to lose — that with Beyond Meat, they can pretty much eat their cake and still have it. The company was founded by Ethan Browne in 2009, and he has continued to hold the CEO position to date.

Beyond Meat's Business Model

Beyond Meat specializes in the production of plant-based alternatives to three meat products:

1. Beef
2. Pork
3. Poultry

These give way to the following two categories of goods in each case:

1. **Ready to eat (Fresh):**

The Beyond Burger, Beyond Sausage, and Beyond Beef are the most popular options in this category according to consumer preference, while the Beyond Breakfast Sausage, Beyond Meatball, and Beyond Fried Chicken trail behind. The latter is nonetheless catching on reasonably fast;

2. **Ready to heat (Frozen):**

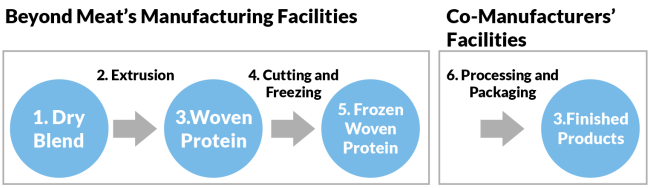

The Beyond Beef Crumbles are the sole product in the frozen foods category. They are also not as well-known as the first three products mentioned, but features like its nutritional make-up — 14 g of protein and 1 g of fiber per serving — and the absence of soy and GMO ingredients make it just as promising a product as the others.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Beyond Meat's products are typically made with pea protein as the primary raw material. Its major suppliers of this material and more include Roquette and Puris Proteins, LLC. Supply contracts for this critical ingredient typically last up to three years to ensure a consistent flow. Plant-based flavors are an equally important component of the products. The ingredients for this are very readily available and provided by many vendors. Beyond Meat creates the formula for these flavors and gives it to a vendor of its choice, which then manufactures it and puts it through a quality check in the lab before it's supplied for production.

Beyond Meat then goes on to manufacture its products. For the most part, this is done solely by Beyond Meat, although the facilities of certain co-manufacturers are also employed. Among such co-manufacturer is a company that was established in the Netherlands and a subsidiary established in China, both in 2020.

The diagram below, taken from Beyond Meat's 2019 annual report, summarizes the manufacturing process.

Given that the co-manufacturers are where the manufacturing

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

process ends, it is necessary for the finished goods to be distributed from those locations using third-party logistic companies. Some products are shipped directly to customers, while others are moved and stored in cold storage facilities.

Beyond Meat expands its consumer base by utilizing both human and digital resources.
The 36-person sales team is split up into teams for retail, food service, global trade, and strategic alliances. They collaborate closely with distributors and brokers to promote and advance sales throughout the U.S. and Canada.

A group of field marketing representatives is also present. Its primary function is to offer free samples of the products to customers at events, food trucks, and stores. More than 2000 of these events had taken place by the end of 2019, and about 428,000 samples had been given out. They are a key resource for raising consumer awareness of Beyond Meat's fundamental goals.
Furthermore, Beyond Meat has collaborated with a network of brand ambassadors and used social media platforms to build a strong following from people in the sports and entertainment industries who share the company's core values and mission. It had amassed a following of 440,000 on Facebook, 970,000 on Instagram, and 118,000 on Twitter by the end of 2020.

The Problem

Livestock production consumes up to 25% of the world's freshwater, occupies roughly 30% of ice-free land, and emits 7.1 gigatons of greenhouse gases per year. The notion that killing animals for food is cruel has grown into a raging movement over the years. It is conceivable that the supply of meat would be inadequate to meet demand in the near future.

It is no wonder, therefore, that more and more people are

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

beginning to question conventional meat consumption. Is it indispensable? Or are there environment-friendly alternatives?

The demand for plant-based foods has increased over the past year, with sales in the United States increasing by 20%. Plant-based meats saw a 24% increase in sales, reaching $670 million.

Customer Segments

People are drawn to a low-or no-meat diet for a variety of reasons, ranging from animal welfare to health concerns.

Some of Beyond Meat's consumer segments include:

- Consumers who are health conscious
- Consumers who are concerned about the environment
- Consumers who are vegetarians or vegans
- Consumers who are flexitarians

While Beyond Meat may seem to be aimed at the vegetarian/vegan market, it is actually more appropriately targeted at the larger meat-eating population or the growing flexitarian market. The flexitarian diet offers a seemingly more reachable compromise to the strict vegetarian diet. According to U.S. News, it is the second-best diet, and with the help of social media, it has generally turned into a goal worth pursuing.

Unfair Advantage

Producing an excellent meat substitute that can replace or enhance the taste of meat is, on its own, a competitive advantage in the market. It makes the choice of Beyond Meat a no-brainer and gives it a chance to stand out based on

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

ethical and environmental considerations. The cost of production is also considerably lower than that of products made from meat.

Revenue Streams

Beyond Meat's products are sold through its two major distribution channels: retail and restaurant and food service.

Retail

According to internal records, Beyond Meat has offered its products to the market through up to 62,000 retail outlets, including retailers both within and outside the U.S. Some of the world's largest retailers, including Walmart, Target, and Costco, are included in that number, with Costco being one of the company's largest customers. In fiscal 2020, net sales from only retail channels generated up to $300 million, a more than 100% increase over the previous year. As a result, Beyond Meat has a formidable presence in the food retail market.

Restaurant and food service

Additionally, Beyond Meat products are provided directly to catering companies and restaurants. According to data collected at the end of 2020, there were over 42,000 restaurants offering Beyond Meat products to the U.S. public and 18,000 abroad. In contrast to retail distribution, there was a 30%+ decrease in revenue accumulated from restaurant and food service sales, primarily due to the COVID-19 pandemic limitations.

Similarly, though not as severe, there was a 16% drop in international market revenue. Products are sold to the international market through distributors.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Business Costs

Some of the costs Beyond Meat incurs are:

- Laboratory costs
- Research and development costs
- Marketing and branding costs
- Raw material costs
- Distribution costs
- Storage costs

How Beyond Meat makes money

There are 122,000 Beyond Meat outlets worldwide. Revenue growth is attributed to a recent surge in demand and an increase in the number of stores carrying its products. In general, Beyond Meat has made more money per pound of product sold in retail than in food service. One of the factors causing this was the COVID-19 pandemic. Meanwhile, one-fourth of the business's revenue comes from international sales.

DELIVERY HERO

Because of the COVID-19 event and how long it lasted, there was an unavoidable decline in some aspects of human culture and an increase in others. "The new normal" is what it was called as people worldwide were forced to make changes that would have to continue to be in place for many months after. One of the key trends that emerged this time was the practice of ordering food to be eaten indoors, since the restaurants had to be closed in accordance with safety regulations. As a result, transitioning to digital dining became

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

a requirement for many restaurants under the new normal. The Delivery name comes to the rescue.

A brief history of Delivery Hero

Delivery Hero is one of the leading companies in the food delivery industry. It was founded in 2011 by a group of five people: Nikolas Ötsberg, Kolja Hebenstreit, Markus Fuhrmann, Claude Ritter, and Lukasz Gadowski, only one of whom is still an executive at the company today. They were able to forecast the impending growth of food delivery via mobile apps and online services.

To achieve their goal of global consolidation, two rounds of funding raised in 2011 were combined with seed capital, and successful acquisitions were made in Australia, Germany, the United Kingdom, and Mexico, with the latter two markets remaining the company's largest to date. Following further funding rounds, the company then sought acquisitions in Europe and Latin America between 2012 and 2014.

In 12 funding rounds, investors including Rocket Internet, Insight Venture Partners, German Startups Group, and Hasso Plattner Ventures helped Delivery Hero raise up to $1.41 billion. It operates in 33 countries, manages a global network of approximately 300,000 participating restaurants, and processes approximately 10 million orders per month. With an estimated value of $3 billion, it is now arguably the world’s largest online food delivery network.

Delivery Hero's Business Model

The main service that Delivery Hero provides to the general public is a platform or marketplace where people can browse menus and make food orders on a computer or a mobile device. It is a value-driven company operating on a system that incorporates strong analytical tools.

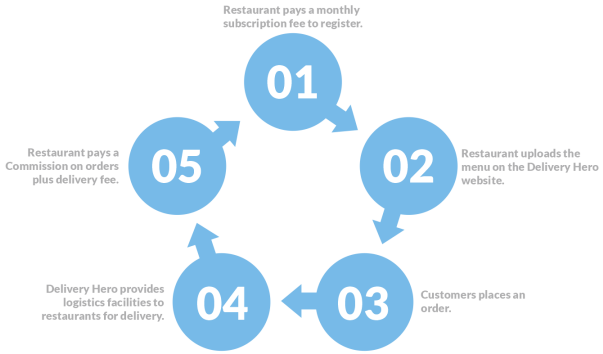

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

It collects data from reports generated by its food delivery system and uses it to monitor the market and promote future growth. It has done a good job of securing connections all over the world.

As a result, knowledge exchange between different geographic areas is facilitated, and its partner merchants are provided with useful data analytics and market information to aid in the growth of their online sales.

Below, there is a diagram summarizing the process flow of Delivery Hero.

PROCESS FLOW OF DELIVERY HERO

Customer Segments

The two major customer segments of Delivery Hero are:

- General consumers
- Restaurants

Customers who lack the time or ability to prepare their own daily meals, as well as those who are unable to physically visit restaurants, are Delivery Hero's primary target market. Its marketplace, which is primarily made up of local companies

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

looking to grow their customer bases and brand awareness, offers products for up to 300,000 restaurants around the world.

Value Propositions

The value Delivery Hero offers is the simplicity of its marketplace in allowing the customer to consider various options from various restaurants at the same time and then proceed to place an order without much more than a few taps on the phone or laptop browser or the Delivery Hero app. No matter where they are, they are more or less a click away from their preferred meal. It also offers start-ups a platform to introduce or promote their brand and products to the market in real-time.

Channels

In each of its 33 markets, Delivery Hero is active through a network of affiliated businesses, including Hungry House in the UK, Lieferheld in Germany, Pizza Portal in Poland, and Foodik in Russia. Each of these companies has a website and mobile apps for iOS and Android that have simple interfaces for ordering, managing accounts, and browsing menus.

Customer Relationships

Delivery Hero serves as a bridge between the consumer and the restaurant. Besides, the platform is designed to be entirely self-service. Hence, direct interaction with the consumer is not typical. In fact, while the option of creating an account is made available and encouraged, it is not required to use the service. Unregistered customers are able to browse menus and place their orders just as conveniently. Customers can, however, still contact the company via customer support staff, either online or by phone. Registered customers are updated on the offers and discounts available via regular emails.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Restaurants can sign up to join the Delivery Hero network online or by getting in touch with the Delivery Hero staff directly. Delivery Hero is also accessible to the general public on social media pages run by their subsidiary businesses on Instagram, Facebook, YouTube, and Twitter.

Key Activities

Delivery Hero charges a subscription fee to participating restaurants in exchange for their participation in its network, and takes a commission on every order placed through its marketplace. Furthermore, the company manages a network of affiliate marketing partners to whom it pays sales commissions.

Key Partners

To help it achieve its goals and ensure the smooth running of activities, Delivery Hero collaborates with tech companies, delivery service providers, and marketing affiliates. Collaboration with delivery service providers typically results in a merger or acquisition. Affiliate marketers are run through local subsidiaries. Following an investment by Germany's Rocket Internet, Delivery Hero partnered with Foodpanda, a comparable company owned by the investor. In order to learn more about customer behaviors, it has also partnered with data analytics firms like Localytics.

Key Resources

As a company that runs almost entirely online, Delivery Hero’s major assets are its software platform, IT infrastructure, and personnel. The business model of the organization also heavily relies on its network of participating restaurants, and it gains from its network of affiliate marketing partners.

Cost Structure

The majority of Delivery Hero's expenses are spent on

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

managing its partner and restaurant networks; maintaining its IT infrastructure and software platform; and keeping its 3,000 employees, who are paid salaries and benefits. It also manages a network of offices, which incur fixed costs such as rent and utilities.

Revenue Streams

The public is not given access to Delivery Hero's revenue statistics. However, it is projected to bring in about $600 million annually.

The majority of its income comes from fees assessed to the participating restaurants. A one-time setup fee is charged first, followed by a monthly subscription fee. Every successfully completed order also generates a commission.

These charges in the UK are said to be a set-up fee of £499, a subscription fee of £14.90 per month, and a commission of 14% on all orders.

How Delivery Hero makes money

Delivery Hero makes money by levying a fee on each order. Its fee is relatively lower than that of its competitors, though it charges more if it does the delivery itself rather than having it done by the restaurant. At a meeting in 2016, Niklas Östberg, the current CEO, gave a brief explanation of how it works. He explained that the wider the reach an eatery obtains via the

Delivery Hero platform, the more profit both the restaurant and Delivery Hero would make. It's sort of a symbiotic relationship between the restaurant and the delivery service. In his words: "Eateries need to be on our stage, and we charge an expense for transmitting orders".

16 FAILED FOODTECH STARTUPS & THE REASONS BEHIND

When starting a new business, there are many factors to consider, like funding, idea development, risk assessment, and market, product, and consumer analysis.

But, like any other industry, there are challenges that these startups will have to overcome. Finding a market willing to pay for your solution, without even knowing what it is, is one of the challenges.

However, 90% of startups will be unsuccessful in overcoming these obstacles, which inadvertently leads to their failure and shutdown.

In this section, we will be looking at 16 unsuccessful foodtech startups and the reason behind their failure.

DAZO

Dazo was founded in India in 2015 and shut down in 2016 because it could not keep up with the fierce competition.

Dazo was a food tech startup that served customers on demand. They partnered with about 20 restaurants, and their

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

goal was to serve customers the perfect meal within a few minutes of the customers' orders. They achieved this by analyzing customers' behavior and feedback.

The main reasons the startup failed were because of fierce competition and lack of funding. The food tech industry requires much funding, and Dazo lacked enough of that. Also, when coupled with the slashing of rates due to high competition, Dazo did not make sufficient revenue to keep the business running.

DINNER LAB

Dinner Lab was founded in the United States in 2011, and it was closed in 2016.

They grouped strangers in an unfamiliar location for a culinary experience. They acquired their customers through a membership plan, and such customers would receive invitations about 2 to 4 times per month to experience this culinary thrill.

However, Dinner Lab failed because the business plan was not sustainable for various reasons. Firstly, the timing of the dinners by midnight was not practical. Secondly, according to the CEO, the company was difficult to manage due to the numerous variables and the dissatisfaction of the customers.

DINNR

Dinnr was founded in the United Kingdom and lasted from 2012 to 2014.

They offered their customers a platform to select ready-made recipes on their website and order measured ingredients with

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

attached instructions to be delivered to the customers. The only occasions they served prepared meals were on popular celebrations like Christmas and Thanksgiving, amongst others.

Dinnr became a failed business because of the lack of a market in need of their services. Customers could easily go to a nearby market to get what they want. This outcome may be blamed on a lack of proper research from the Dinnr team, and that was a vital mistake.

JUICERO

Juicero was founded in 2013 and closed in 2017. It was located in the United States.

Their business plan was to pack already prepared fruits in single-serving packets and use a Wi-Fi-connected juicer to squeeze the juice out of the fruit packets into a glass.

However, despite raising substantial funds for the business, Juicero failed due to bankruptcy, which was the result when people found out that the quite expensive juice press was practically useless.

KITCHIT

Kitchit was founded in 2011 and shut down in 2016. It was located in the United States.

Kitchit basically enabled their customers to enjoy their dining experience by providing chefs to carry out the entire culinary process in the comfort of the customers' homes. This option made it cheaper and more comfortable than going to high-end restaurants.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Kitchit, despite having a brilliant business model, failed due to intense competition in the market. They were unable to generate sufficient profit margin to cover their cost of operation.

MAPLE

Maple was created in 2014 and closed in 2017. They were based in New York, in the U.S.

Their services included preparing and delivering meals in New York, with a complimentary cookie for each delivery. Their idea was to get advanced chefs to prepare the main menu and have satellite kitchens provide the complimentary dishes.

Maple failed because they lost money on each meal that was delivered and only started making a little profit towards the closure of the company. Their revenue fell short of their operational costs and caused severe losses, which ultimately led to the closure of the company.

MUNCHERY

Munchery was created in 2011 and closed in 2019. They were located in the United States.

They created unique menus that were always changing and prepared by gourmet chefs. This menu was available to users and would be delivered to their doorstep.

However, although the company was properly funded and had a lot of media attention, it still failed due to its handling of both preparing the food and delivering it. This proved to be

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

too much financially, and the arrival of competition seemed to be the last straw because Munchery was unable to get new customers. They ended up bankrupt and the company was shut down.

COSTS WEREPEPPERTAP

PepperTap was founded in 2014 in India and closed in 2016.

PepperTap helps customers buy and deliver groceries from local suppliers to their doorstep.

Despite receiving sufficient funding, PepperTap still failed for various reasons. Factors that led to its demise included a lack of sufficient revenue due to the discounts offered; the unpreparedness of the Indian market for this type of service; and the fact that its operational costs were simply too high.

SPOONROCKET

SpoonRocket was a United States-based company that was created in 2013 and closed in 2016.

Their services include delivering already-made food and producing affordable meals per day.

SpoonRocket, however, failed due to intense competition. They also failed to retain their customers and failed to create trust with their customers. Lastly, when their financial situation became worse, they failed to source funds to keep themselves afloat. All of these factors led to the closure of the company.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

SPRIG

Sprig was founded in 2013 and was closed in 2017. It was located in the United States.

Basically, Sprig delivered quality nutritional meals to their customers very quickly, and their nutritional value was provided to the users.

Sprig, however, failed because delivering food on demand is very competitive, and in order to favor and attract more clients via discounts, their operational costs rose above their profits, and they struggled but eventually closed down the business.

TAKE EAT EASY

Take Eat Easy was created in 2013 and closed in 2016. They were located in Belgium.

Their services included meal delivery for customers, which they accomplished by connecting users to various restaurants and ensuring the meals ordered were delivered within an hour.

Take Eat Easy failed, as many other startups in this sector have, due to competition and a lack of sufficient funding, and they had to close down because they could not meet the standards of the sector.

TEFORIA

Teforia was a U.S.-based startup created in 2014 and dissolved in 2017.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

They offered a tea brewer to their consumers and claimed the brewer would create the perfect cup of tea via smart technology. The brewer initially cost over $1000, and they also sold tea packets.

Although Teforia raised sufficient capital, the product they offered lacked a market for it, and one of the reasons why was that it was too expensive. Also, some consumers deemed it to not be as effective as was claimed. Considering it was created within the same time frame as the Juicero, which had quite similar functions, they, not so surprisingly, shared the same fate in their closure.

BOTNIM

Botnim was created in Israel in 2017 and was closed in the same year.

Their services were to deliver highly nutritious dishes to their users, who chose such dishes based on the nutritional value provided.

One of the reasons they failed was a lack of funding. They also did not have any employees. The key factor for their failure, however, was that they did not validate the market and took the wrong approach, which subsequently led to their closure.

CHOWDY

Chowdy was a Canadian startup that was created in 2014 and dissolved in 2016.

The business idea involved offering prepared meal plans to the users at $7.99 per meal. They, however, did not handle

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

the delivery.

Chowdy failed primarily due to legal issues. The business model was also not sustainable, leading to the ultimate closure of a thriving business.

JUICE STARTUP

The Juice Startup was founded in 2020 and closed in 2020.

Its service included making nutritional and medicinal natural juices and delivering them to various users after their orders had been made.

This business failed because the founder did not validate the market before proceeding with the idea and ended up with a loss of about $3,000.

MELON

Melon was a food delivery startup that was created in 2019 and closed in 2020.

They targeted the most popular products ordered in the most popular periods of time, and this made their system cost-effective.

However, what led to their failure was the difficulty in maximizing profits. The company ended up shutting down because of this.

MARKETING STRATEGIES FOR FOOD TECH BUSINESSES

The evolution of technology in almost every sector of human activity has also rubbed off on the food sector. The food tech sector is a very competitive sector, with one of its most popular niches being on-demand food tech.

This has led to the development of a few effective marketing techniques that food tech startups need to follow to survive the competition.

Here, we will be talking about six of these proven marketing strategies in food technology.

SWIGGY: TARGETING GEN Z THROUGH IN-APP ADVERTISING TO REDUCE CAC

In-app advertising is quite an effective tool to gain new customers. In 2019, Swiggy reached a 6-month deal with Snapchat, as their target was the younger generation.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

This resulted in them gaining about 11,000 new orders per month. This was the result of in-app advertising on an app that is used by a lot of the younger generation, and what better time to catch their attention than when the user is deeply engrossed in social media entertainment?

ZOMATO: MIXING BUSINESS WITH HUMOR FOR BETTER ENGAGEMENT AND VIRALITY

Zomato is arguably one of India's largest food tech companies, and they hook its audience by including memes in interactions.

This marketing strategy is understandably effective in today's tech era because their audience most likely interacts with memes a lot through social media, so Zomato's audience is sure to relate jovially with their interactions.

This strategy has helped the brand maintain about 3 million daily orders. Therefore, what Zomato has helped us understand is that implementing humor into marketing is a proven strategy.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

UBEREATS: DATA-DRIVEN MARKETING OPENS OPPORTUNITIES TO MEET INCREASING DEMAND AND HYPER-PERSONALIZATION

Consumer data is one of the most essential tools that food tech companies can use. UberEats is one of the companies that leverage user data effectively.

Given that they already have a cab service division, they are able to gain data on a user's needs and tailor their marketing to meet those needs.
It is therefore established that data-driven marketing is one of the most accurate and effective marketing strategies in the world today.

FRESHMENU: CONVERTING VISITORS TO CUSTOMERS WITH WEB NOTIFICATIONS

FreshMenu is a relatively smaller brand in food tech. They use local marketing strategies based on local demand.

The special thing about their marketing strategy is that, instead of offering discounts, they send palatable menus via web notifications, and this has helped them amass about 130 thousand new subscribers.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

FAASOS: 15 MIN. WINDOWS FOR PUSH NOTIFICATIONS ON ABANDONED CART ITEMS AND TARGETING MEALTIME HOURS FOR BETTER CONVERSION

Faasos is a big food tech company in India that launched in 2011.

They have a monthly growth rate of about 25%, and their special marketing strategy is primarily responsible for that.

They send push notifications at lunch and dinner hours to create demand from the users. These notifications were also sent to those users who had abandoned their orders in their carts.

This marketing strategy once again stresses the importance of web notifications.

BIG BASKET: REPLACING LOCAL VENDORS WITH A HYPER-LOCAL MARKETING STRATEGY

Big Basket is a tremendously successful food technology company, by global standards.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

They use celebrity endorsements and influencers to create visibility, then they work on improving the high-end service.

This hyper-local strategy has helped them retain customers and maintain effective service. They partner with local stores and high-end influencers to gain effective service and market visibility.

FUTURE OF FOOD TECH

Over the years in food technology, various pain points have been identified, and diverse technological methods have been implemented to resolve those pain points. The areas in which completely new technological innovations have been implemented will be discussed below.

CONSUMER FOOD TECH

This is the area in food tech that deals with the development of technologies geared toward the consumer.

Various trends are now coming into play, for example, plant-based foods, animal-free, non-dairy milk, etc., and they are rapidly replacing the organic-based trend that was existing not so long ago.

Food companies are now investing so much in developing highly nutritious foods with smarter and more sustainable methods.

INDUSTRIAL FOOD TECH

Industrial food tech addresses the business model and the B2B aspect of food tech.

This aspect of food technology seeks out the most effective ways to develop proper maintenance and delivery models to reduce the waste of resources. Apart from that, it also deals with the processing of food.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

New methods to carry out these tasks in the food industry are being developed with time, and some of these new methods include creating technology that can automatically detect foreign objects in the food processing stage.

This branch helps to create sustainable business models in food tech.

SUPPLY CHAIN & PROCUREMENT

This sector is concerned with the delivery of food to the consumer.

Some startups have packaged chef-prepared meals and placed them in vending machines that operate automatically. 6D Bytes uses AI and machine learning to prepare healthy food for consumers.

All these innovations are to ensure the traceability, sustainability, and freshness of food and to eliminate food waste.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

RECENT TRENDS IN FOOD TECH BUSINESS

Because of the ever-changing and competitive nature of the food technology sector, Various trends come up from time to time.

We will be discussing some of the trends in the modern Asian world below.

'ROBOT' RESTAURANTS

These are restaurants that have been completely digitized. They involve robots and AI in every process, from production to the food that gets to the consumer.

Robots are even utilized in public restaurants in Asia, amongst other places.

Orderbird is a startup that has utilized this trend.

SMART PACKAGING

With smart packaging, the condition of foods in transit can be monitored via nanotechnology. Such technology will be able to detect microorganisms that dwell in the package.

Also, a process that counts how long food will remain edible after it has been opened has been created.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

SUSTAINABILITY

In the world today, there are still areas riddled with hunger. Therefore, food waste in other parts of the world can not be tolerated.

This has led to the development of sustainable technology to ensure that food waste is crippled.

Smart refrigerators that notify the user of the condition of food stored or interfaces that support sharing of food help to avoid the much-dreaded waste of precious food.

AUGMENTED TRANSPARENCY

Consumers have been clamoring to know the nutritional content of the food they consume, so a trend has been developed to alleviate such concerns.

Smart labels assist the user by providing the content of what he is about to order or consume, and this gives the consumer the opportunity to make choices compatible with him and avoid food waste.

PERSONALIZED DIETS

Personalized diets take the special things about each consumer into account in the preparation of their meal plans. Technology to analyze an individual's metabolic profile, and to figure out what works for such individuals and what does not, is being developed.

This creates an even more comfortable meal plan for the individual and prevents food waste because the meals are

tailored according to the individual's specific needs.

VEGETABLE PROTEINS AND SYNTHETIC MEAT

Most food technology companies now produce synthetic meat from vegetable proteins or through the harmless retrieval of cells from animals.

There's a lower risk of contamination with synthetic meats, otherwise referred to as cultivated meat, and it's equally nutritious.

Cultivated meat in the market today is mostly in the form of chicken and steaks.

Vegetable proteins, on the other hand, have existed longer than cultivated meat, and they offer alternative sources of protein, especially for vegetarians.

SNACKING AND UPCYCLING

Upcycling is a term that simply means making food products from ingredients that would otherwise have been wasted.

These days, more effort has been garnered to prevent food waste, and snacks are now being made from the upcycling process. It is an effective way to maintain our agricultural resources and ensure that there is more food in circulation.

In some instances of snacking with upcycling, crackers have been made from veggie pulp, and meals, such as fried puffs, have been created from potato skins that would otherwise have been discarded.

FOOD TRACEABILITY

This is simply the ability to track the movement of food across the supply chain up to the point it gets to the consumer.

Much like how phones and other tech devices can be tracked and recalled in cases of faulty production, this innovative idea is now being applied to our food and product recalls in the food sector can now be done in an easier manner.

It also gives the product owner a better product inventory and said the owner will be able to monitor the flow of his food business.

CONCLUSION

As you can see, food technology includes all aspects of food-related technology, from the farm to the consumer. Food lovers and demanding consumers are increasingly spending on food tech innovations due to their convenience and ability to retain high-quality food.

With over 1,700 FoodTech companies, there is a clear push to incorporate technology such as robotics, drones, 3D printing, artificial intelligence, and more into the food industry. Attempting to improve industry efficiency while pursuing more sustainable solutions for our ever-growing population.

Given how fiercely competitive the food tech industry is, it's quite exciting to watch as different businesses compete to find the most convenient and sustainable way to run their food businesses. Some, on the other hand, have been unable to keep up with the buzz and, as a result, have dropped out of the ecosystem.

The competitive and cyclical nature of farm-to-fork innovation, as well as consumers' awareness of conscious consumption, have fueled the prominence and growth of FoodTech innovation and industry investment.
