INTRODUCTION

There are numerous innovative approaches to developing new ideas and solving problems. However, one technique at the forefront of this is brainstorming.

If done correctly, group brainstorming can feel like a win for the entire team. It not only encourages innovative reasoning, unites the team, and helps come up with the perfect idea, but it also leaves members feeling energized, accomplished, and excited about the next steps.

Traditional brainstorming as a method of idea generation is something everyone is familiar with. The team members gather around a whiteboard and throw around all sorts of ideas. You could even play a game of word association to strengthen your ideas or do some online research to flesh them out.

However, aside from the traditional approach, you can do a plethora of alternative exercises on your own or with a group to tackle problems and develop new ideas.

To accomplish this successfully, each session participant needs to be prepared, creative, and confident. Understanding common strategies for idea generation provides you with the right tools to do so.

In this super guide, we will go deep into the crevices of effective brainstorming and share everything you need to know to understand and implement them perfectly in your work process.

WHAT IS BRAINSTORMING?

There is a lot of emphases placed on brainstorming as an excellent method for business professionals to generate fresh and original ideas. As a term that is thrown around quite a bit, it is often interchanged with other problem-solving and idea-generation techniques. It has become so important in business, and for a good reason. But what is it, and why does it hold such importance as a business tool?

Brainstorming is a group problem-solving and idea-generation strategy that involves coming up with as many concepts as possible in a short time without filtering or evaluating them. It can be employed in many contexts to solve problems, generate new ideas, or investigate other choices in a free-flowing manner.

WHAT IS BRAINSTORMING?

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

PURPOSE OF BRAINSTORMING

The goal of brainstorming is to get people to think creatively and come up with new ways to solve problems. For example, a firm might utilize brainstorming to create new product ideas. At the same time, a school might use it to improve students' learning experiences.

One of the best aspects of brainstorming is that it allows you to generate a large number of ideas quickly. When people are encouraged to come up with as many ideas as they can, even if they seem crazy or impossible, they end up with a wide range of possible solutions to the problem. This is especially useful when traditional problem-solving methods produce the desired results.

Another benefit of brainstorming is that it encourages collaboration and teamwork. It is possible to tap into a team's diverse perspectives and expertise by bringing a group of people together to solve a problem or generate new ideas. This can lead to more creative and successful ideas than if one person worked alone.

Brainstorming can also be entertaining and exciting, which boosts morale and improves the team environment. This, in turn, creates a safe, nonjudgmental environment where people feel comfortable sharing their ideas and taking risks. They achieve their goals and increase productivity with the right strategies and a healthy workspace.

BENEFITS OF BRAINSTORMING

As a tool for problem-solving and idea production, brainstorming offers a number of benefits.

1. One of the primary benefits is the rapid generation of numerous ideas;

2. It promotes teamwork and collaboration. By assembling a group of people to solve a problem or generate new ideas, it is possible to draw on the diverse perspectives and experiences of the team. This can result in more creative and practical ideas than working alone;

3. Brainstorming, which can also be entertaining and engaging, fosters a strong team dynamic and a morale boost. Creating a friendly and judgment-free environment allows members to freely share their ideas and feel comfortable taking risks. It pushes them to become more motivated and engaged, resulting in a more positive and productive work environment;

4. Brainstorming not only improves workflow, but communication as well. As team members work toward a common goal, they improve their communication and trust, which leads to better work from each person and the team as a whole;

5. Encouraging people to generate as many ideas as possible inspires them to think creatively and outside

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

the box, and also fosters original thought and innovative culture within a company. As a result, businesses may develop more unique solutions and concepts to remain competitive and on the cutting edge of business trends.

BENEFITS OF TEAM BRAINSTORMING

"Think creatively and outside the box!" Team brainstorming has many benefits, like coming up with a lot of ideas, improving communication, and encouraging a culture of innovation. When trying to solve a problem or come up with a new product, brainstorming with a large group of people might lead to more original and useful ideas. Therefore, don't just sit there; gather your team and begin brainstorming!

Boosts group morale

The ability to increase group morale is one advantage of brainstorming. People can develop a sense of camaraderie and teamwork when they work together to solve problems or come up with new ideas. This can enhance overall group morale and build a productive team environment.

A sense of accomplishment and enjoyment can come from brainstorming, which can assist in breaking up the monotony of daily labor. It is possible to create a place where people feel comfortable taking risks and sharing their ideas without fear of being judged. People may feel more motivated and interested as a result, which could make the work environment more positive and productive.

In addition to being fun and interesting, brainstorming can help team members learn to respect and trust each other. By bringing people together to work on a common goal, you can

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

help them get to know each other and talk to each other better. This may create a more unified and encouraging work atmosphere, further increasing team morale.

Promotes creative thinking.
The purpose of brainstorming is to foster creative thought and generate fresh ideas for resolving problems. The efficient method of brainstorming encourages the generation of original ideas. During this practice with the group, members are going to try to generate as many ideas as they can in a short period of time without censoring or evaluating them in any way.

It can help to advance the ideas of others, as well as foster original thoughts. By encouraging people to build on the ideas of their coworkers, it is possible to create what is known as a "snowball effect," which is a chain reaction whereby one idea leads to another, and another. This may inspire even more creative thinking and result in even more inventive responses.

Therefore, brainstorming is a very efficient method of encouraging creative thinking.

Brings together diverse ideas
One of the best things about brainstorming is that it brings together many different ideas. It is possible to obtain a large number of unique ideas and perspectives on the topic of discussion by inviting a diverse group of people to participate in the brainstorming session. This will inspire more creative and unique approaches to the challenges.

Having a group of people participate in a brainstorming session together can be quite beneficial when attempting to find solutions to complex or diverse challenges. In order to reach a decision, it is helpful to bring together individuals from different backgrounds, with varying areas of expertise

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

and different points of view. This would enable everyone to study the issue from a number of perspectives, which could ultimately result in solutions that are more comprehensive and effective.

Yields a large number of ideas.
As previously stated, brainstorming is known to provide a multitude of original ideas. Team leaders can develop a large number of potential solutions to a problem by distributing to each group member the obligation of generating as many ideas as possible in the shortest period possible.

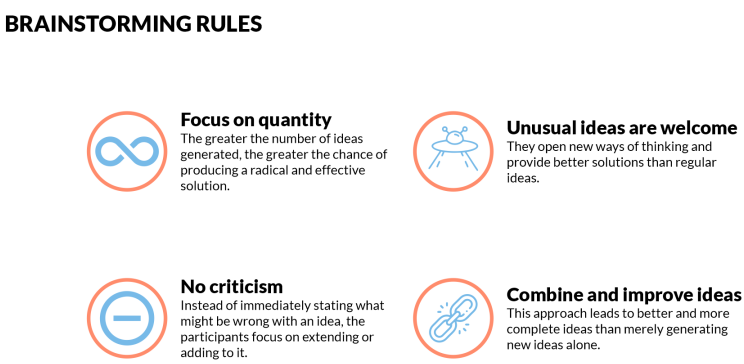

Everyone should be encouraged to participate in a variety of idea-generating activities, as this will increase the number of ideas generated. You will have access to the vast array of perspectives, ideas, and experiences that your team members bring to the table if you allow everyone on the team to share every suggestion they have. In turn, your members will feel even more encouraged to think of unique solutions to existing problems, resulting in a larger pool to choose from.

HOW TO RUN A BRAINSTORMING SESSION

THE FOUR PRINCIPLES OF BRAINSTORMING

For effective brainstorming, it is common practice to consider the following four principles to be essential. These guidelines help cultivate an atmosphere that is conducive to the generation of creative and original ideas.

Quantity over quality

The notion of "quantity over quality" is a fundamental tenet of effective brainstorming. It is proposed that to inspire creative thinking and create original answers to issues, people should be encouraged to generate as many ideas as possible,

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

regardless of how crazy or absurd they may seem. This means that the goal of the brainstorming session is to come up with as many ideas as possible without judging or screening them.

When brainstorming, it's important to put more emphasis on how many ideas are shared than on how good they are. This makes people feel welcome and free to share their ideas. If you don't filter or analyze ideas during the session, you can come up with a wide range of possible solutions to a problem. This leads to more original and creative thinking.

People who care more about quantity than quality make it possible to build on the ideas of others. It is possible to create a "snowball effect" where one idea leads to another and another by encouraging people to build on the opinions of their colleagues rather than only analyzing or criticizing them. This may encourage even more original thought and produce even more inventive answers.

Withhold criticism

Refraining from offering criticism is yet another essential piece of advice for productive brainstorming. During the brainstorming process, it is imperative that no one analyze or criticize the ideas of other participants. This endeavor aims to establish a setting where individuals feel comfortable expressing their opinions without concern that they will be ridiculed or criticized.

It is important not to criticize other people's ideas during a brainstorming session because this helps people think creatively and come up with new concepts free from any restraints. Refusing to criticize the ideas of others encourages their development and allows them to express themselves to their fullest potential. The "snowball effect," in which one idea leads to another, encourages people to build on the opinions of their coworkers rather than simply evaluating or criticizing

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

them.

Welcome the crazy ideas
When you say you're open to "crazy" ideas, you want people to feel free to share their most crazy or illogical ideas during the brainstorming session without worrying about being judged or evaluated. The goal is to promote original thought and push people to think outside the box.

People are more likely to share their wildest ideas when they are asked to solve complicated or multifaceted problems. By not filtering or judging ideas as they come up during the session, people can come up with a wide range of possible solutions to problems. This can encourage more original and creative thinking.

Combine, refine, and improve ideas
One of the most critical aspects of brainstorming is that it is intended to be a fluid and unstructured process. During this phase, participants are encouraged to generate as many ideas as they can without worrying about being judged or criticized for their contributions.

When a group has finished coming up with a list of ideas, the next step is to merge, develop, and enhance the ideas the members developed. In this stage, you will take the most important ideas that emerged from the brainstorming session and transform them into something that is more tangible and helpful. This entails putting undeveloped concepts through the process of integrating or enhancing them to provide more comprehensive and applicable answers. It could also mean developing or strengthening the initial concepts in order to make them superior or more applicable in some way.

TYPES OF BRAINSTORMING

Brainstorming, as a common way for group members to come up with ideas and solve problems, means giving people as much freedom as possible to come up with ideas without having to worry about being judged or criticized. Depending on the group's requirements and objectives, various brainstorming techniques can be used. Brainstorming techniques that are frequently used include:

Analytics Brainstorming

It is necessary to promote creativity and the open exchange of ideas in order to develop new, innovative, and original data analysis techniques. In an analytics brainstorming session, a group of people gets together to brainstorm ideas and answers for analyzing and interpreting data.

The process usually involves leading a conversation among the group members, getting them to share their thoughts and ideas, and then writing these down in a visual format, like a mind map or concept map. This can be especially helpful when dealing with complex data analysis problems because it lets people talk about and think about a wide range of possible solutions. It entails quickly generating as many ideas as possible without critiquing or judging them.

Quiet Brainstorming

Quiet brainstorming is a good way to get creative and come up with new ideas, especially when combined with other brainstorming techniques. Quiet brainstorming, also known as individual or “solo brainstorming,” is a technique in which individuals develop ideas on their own rather than in groups. This method can be helpful when people in a group work better together to come up with ideas, or when people prefer to work alone. It can also help when you need to come up with ideas quickly or are talking about a sensitive or personal

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

subject. In quiet brainstorming, individuals are given a certain amount of time to generate as many ideas as possible, either by writing them down or saying them out loud to themselves. The ideas are then shared with the team or used to inform decision-making.

Role-Play Brainstorming
Role-play brainstorming is a method in which people pretend to be different people or groups of people in order to come up with ideas and solutions. This method works best when the problem or issue is complicated, and there are many different points of view. By taking on different roles, participants learn more about each issue and come up with ideas that take into account the needs and interests of everyone.

For role-playing brainstorming to go smoothly, the facilitator gives each participant a role and a short description of the character or stakeholder they will be playing. Participants then use their roles to come up with ideas and solutions while thinking about their characters' needs and points of view. The ideas are then shared with the group, and the facilitator can lead a discussion to look at each idea from different points of view and think about what it might mean. This process helps spark creativity and encourages participants to look at topics from different angles and think outside the box.

HOW TO BRAINSTORM IDEAS

The tried-and-true "brainstorming" method is a good way for a group to brainstorm ideas and discuss problems. Now, how do you actually achieve that? To improve your brainstorming sessions, consider these suggestions.

Focus on quantity over quality
The purpose of a brainstorming session is to come up with as

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

many potential solutions as possible, not to find the best one immediately. As a result, quantity over quality should be prioritized. Simply put, having more ideas means having more to pick and choose from. Even if a concept seems far-fetched or impossible at first, it may pave the way for something better.

Don't stress out if you need help finding the perfect answer. Instead, try to generate as many ideas as you can. More possibilities mean more potential for success while trying to discover a solution. It's also important to remember that some very out-there or seemingly unworkable ideas can be helpful. You can never tell where they will lead!

Selectively apply constraints to keep the session focused
During brainstorming sessions, it can be helpful to put limits on some ideas to keep the conversation on track. Limitations or boundaries imposed on the brainstorming process are referred to as constraints.

One way to use constraints is to set a specific topic or problem to work on. This can aid in narrowing the scope of the brainstorming session and keeping ideas on track. Setting a time limit for the meeting helps keep the conversation on track and keeps it from getting too broad or scattered.

Setting ground rules for the session is another way to apply constraints. Guidelines could say that there shouldn't be any criticism or negative feedback, that people should build on each other's ideas, or that everyone's thoughts should be written down and shared with the group. These rules create a friendly and cooperative atmosphere that encourages people to be more open and creative.

In the end, selectively applying constraints can be a good way to keep brainstorming sessions on track and productive. Setting clear boundaries and guidelines can help you

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

generate ideas and solve problems creatively.

Don’t prune ideas as you brainstorm.
As previously stated, during the brainstorming process, it's important not to judge or criticize your ideas. In other words, don't go around killing off your ideas one by one. The term "pruning" describes discarding or removing concepts that lack promise. It's crucial to fight the impulse to do this if you're trying to save time or simplify the procedure.

Why? Because prematurely discarding ideas can hinder innovation and reduce alternatives. Even the most outlandish and unorthodox suggestions deserve a hearing. Never discount the potential of a crazy idea. However, even if one idea doesn't work out, it may spark other, better ones in the future.

The next time you're trying to come up with ideas, don't be so quick to throw them out. Suppose you and your team are given plenty of time to generate ideas. In that case, you're more likely to arrive at a viable solution.

Never finalize or commit during the brainstorming session
A brainstorming session is about coming up with ideas without judging or rejecting them. The usefulness and creativity of a brainstorming session could be hurt if people feel like their ideas are being judged or criticized. This is because the goal of a brainstorming session is to come up with as many ideas for possible solutions as possible.

Because of this, it's important not to settle on or commit to one idea during the brainstorming session. Instead, we should come up with as many possibilities and ideas as possible. After the brainstorming session concludes, group members can review the suggestions and vote on the ones they think have the most potential.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

It's the best way to guarantee that everyone's thoughts will be heard and evaluated during the brainstorming session. If this is done, there may be better answers to the issue or difficulty at hand.

Look to other sources for inspiration

One way to come up with new, original ideas is to look to other places for inspiration. One way to do this is to think about how you could use ideas and methods from outside your area of expertise.

"Attribute listing" is a creative exercise that can help with this. This is one way to list things about a product, such as its shape, size, color, function, and so on. Based on these characteristics, brainstorm as many potential product applications as possible. The activity can help you think in new ways and come up with ideas you didn't have before.

Finding an unexpected parallel or link between two seemingly unrelated areas of study or experience is one way to use analogical reasoning, which is another strategy for coming up with new ideas. This method entails finding a parallel or link between the two areas of study or experience. You may, for instance, learn about the framework of a beehive and make an effort to apply its ideas to the work that your group or project is doing.

This can make the activity more enjoyable and fascinating for everyone, and assist individuals in discovering connections between ideas they were previously unaware existed.

It is absolutely necessary to take pictures of the whiteboard during sessions in order to have them for subsequent reference. This ensures that the information is preserved even when the whiteboard is cleaned, and it also makes it simple to assess the ideas and principles later. It is important to provide photos of this kind to team members who cannot

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

attend a meeting so that they may still feel like they are a part of the conversation and gain some new information. Those on the team who were unable to attend a meeting in person but still want to participate in the conversation and gain knowledge from it can do so by viewing images like the one shown below.

Using a whiteboard and taking pictures of each meeting's proceedings can be an effective method of the group thought, planning, and idea exchange.

Take breaks

Increasing the frequency of your breaks is one of the most effective ways to improve your performance. It is necessary to take breaks at regular intervals to maintain high levels of productivity and inspiration. This frees you from the obligation to work nonstop simply because you are in the midst of a project.

It is much simpler to take time off during the workday if breaks are scheduled and prepared for in advance. You should take a break from your job and recharge every hour and a half by setting the alarm on your phone to go off at that time. Spending your break time engaging in things that require creative thought is a fantastic way to revitalize your mind and get it back into the frame of mind necessary for productive work.

The act of writing down one's ideas without editing or revising them is referred to as a "brain dump." You'll be able to focus more easily on getting back to work if you accomplish this first. Doodling or quickly sketching anything is yet another option, as it has the potential to improve both your frame of mind and your originality.

In addition to helping with concentration and stress reduction, physical activity, such as going for a walk outside or

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

stretching, can be quite beneficial. The single most important thing to keep in mind while taking a break is to let your body and mind relax and refresh themselves.

TIPS FOR RUNNING EFFECTIVE BRAINSTORMING SESSIONS

Brainstorming can help teams work better together, develop creative solutions to problems, and develop new ideas. However, it can be challenging to lead a productive brainstorming session. For a more productive brainstorming session, consider the following suggestions:

Allow time to prep

When we say, "Allow time to prep," we're referring to the idea that a well-prepared brainstorming session is essential to its success and productivity.

There are several ways to give yourself time to get your thoughts in order before a brainstorming session:

Define the goal and purpose of the brainstorming session: The brainstorming session will be more productive if you set clear goals and objectives ahead of time.

Gather everything you need: Before you start the brainstorming session, make sure you have everything you need. All the tools you'll need to take notes and map out your thoughts and plans, such as pens, paper, sticky notes, and whiteboards.

Invite the right people: Invite those who have a stake in the discussion and can add something to it because they are knowledgeable about the topic and have different viewpoints than the rest of the group.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Set the stage for creativity: Create a calm, distraction-free space where people can work with a full stomach and without being interrupted. This will help people think of new ideas.

If you take the time to do these things, you may have a brainstorming session that is focused, productive, and yields a lot of ideas.

Set a clear intention

Before commencing a task or project, it is crucial to have a definite objective in mind so that you have a clear intention. This way, you will be able to ensure that all of your efforts are directed toward a specific objective rather than being dispersed and going to waste.

Your goals and objectives can be more clearly defined with the use of brainstorming techniques, such as asking yourself what it is you want to achieve and why it is vital to do so. This can assist you in determining what your goals are and what activities are necessary for you to take in order to achieve them.

Setting SMART goals, also known as goals that are specific, measurable, attainable, relevant, and have a deadline, is one more way to demonstrate what it is that you want to do. This might be useful for planning your project and determining how far along you are in the process of completing it.

Setting a specific objective increases your likelihood of achieving that objective because it keeps you focused and motivated. When you have a clear understanding of what needs to be done, it is much simpler to establish priorities and organize your resources in the most effective manner.

Invite new teammates and ideas

Inviting new teammates and ideas means adding new people

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

to a group and getting them to share their thoughts and ideas. This can be a great way to spark new ideas and see a project or problem from a different point of view.

There are several ways to use brainstorming to help with this process, one of which is called "Idea mapping." This is done by drawing a picture of the problem or challenge that needs to be solved, and then adding branches and subbranches to the map to show possible solutions. This method helps break down big problems into smaller, easier-to-handle pieces, making it easier for everyone on the team to share their ideas.

"Brainwriting" is another way to find new people to work with and get new ideas. This is done by having people on the team write down their thoughts on separate pieces of paper, and then pass them around so that others can look at them and add to them. Working with a diverse team can be especially helpful because everyone can share their ideas without feeling like they have to speak up in a group setting.

In the end, the best way to bring in new teammates and ideas is to ensure everyone feels welcome and like they can share their thoughts and ideas. By using brainstorming techniques and encouraging open communication, teams can use the creativity and knowledge of all their members to come up with better, more creative solutions.

Promote inclusivity

Promoting inclusivity means making a place where everyone feels valued, respected, and able to participate fully. This can mean making sure that different points of view and experiences are heard and taken into account, as well as removing barriers that might keep some groups from fully participating.

Utilizing brainstorming tactics that allow everyone on the

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

team to participate is one way to promote inclusivity. For instance, "round-robin" brainstorming, in which each team member shares their ideas without interruption, might assist in ensuring that everyone is heard. The random input is an additional method. The team members record their ideas on slips of paper and then draw them from a hat. This encourages everyone to be inventive and participate.

Not only is it important to use inclusive brainstorming techniques, but it is also important to create an inclusive culture that values and respects diversity. This can be done by setting expectations for behavior, giving training on diversity and inclusion, and actively seeking out and promoting the voices and perspectives of underrepresented groups.

Overall, promoting inclusivity means making sure everyone feels welcome, valued, and able to participate fully and contribute. Organizations can make a more open and creative culture that works for everyone by making sure everyone's voice is heard and that diversity is respected.

Think out of the box

"Think outside the box" is a phrase that encourages people to think creatively and come up with new ideas. It means thinking outside the usual limits or boundaries and looking at things from different points of view.

Using lateral thinking, which means coming at a problem or challenge from a different direction, is one way to "think outside the box." This means looking at the situation from other points of view and thinking of solutions that aren't the usual ones.

SCAMPER stands for Substitute, Combine, Adapt, Modify, Put to Another Use, Eliminate, and Reverse. Asking questions about a problem or challenge is one way to come up with

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

new ideas and solutions. This is another way to "think outside the box."

By using these and other ways to "think outside the box," people can break away from old thinking and develop new, creative ways to solve problems.

Amplify creativity with music

Music can be a powerful way to boost creativity and make a brainstorming session go more smoothly. Here are some ways you can use music to help you think of new ideas:

Set the mood: Music can help a brainstorming session have the right tone and feel. Music that is upbeat and full of energy can help wake up the brain and get the creative juices flowing. In contrast, more calming and relaxing music can help people feel more focused and clear.

Encourage collaboration: Music can bring people together and make them more likely to work together. Listening to music together makes team members feel more connected and more willing to share ideas.

Break up the monotony: Music can help break up the monotony and keep things interesting when working on a long or complex project. It can also help keep people on the team excited and motivated.

Focus: Music can help people pay attention and concentrate better, making staying on task during a brainstorming session easier.

Encourage relaxation: For creativity to grow, the environment needs to be calm and stress-free. Music can help people feel relaxed and at ease, which makes it easier for them to think of their best ideas.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Adding music to your brainstorming sessions can be a simple and effective way to boost creativity and get more done. Music can be a great way to get your creative juices flowing, whether you're working on a creative project or trying to come up with new ideas for your business.

Mix-and-match brainstorming techniques

Mix-and-match brainstorming is a creative way to solve problems by combining different brainstorming techniques to develop new and exciting ideas. This way, teams can take advantage of the best parts of other methods instead of being limited to just one.

Here are some ways to come up with ideas that you can mix and match:

Brainwriting: This is a method where team members write down their ideas and then share them with the rest of the group. This can help team members who are shy and feel uncomfortable speaking up in a group setting.

SCAMPER: In this method, you ask questions to get people to think creatively. For instance, "What changes can we make to this product?" or "What other ways can we use this product?"

Starbursting: This is a way to look at different parts of a problem or challenge by asking a series of "what," "why," and "how" questions.

Reverse brainstorming is a method in which you think of ways to stop something you want from happening. This can help teams think of creative solutions they might not have thought of before.

By mixing and matching these methods, teams can look at problems from many different points of view and come up

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

with many other ideas. This can lead to better solutions that are more creative and have a better chance of working.

Execute your ideas
Executing your ideas is all about turning your brainstorming and planning into action. It's about doing what you need to make your ideas come to life and become real.

Start with a clear goal in mind. This is one of the best ways to put your ideas into action. This will help you keep your efforts focused and motivated as you work to make your vision come to life.

When putting your ideas into action, breaking them into smaller, more manageable tasks is essential. This can help you keep things in order and move forward more quickly.

It's also essential to be willing to listen to feedback and make changes as needed. This can help you improve your ideas and ensure they work as well as possible.

In the end, putting your ideas into action requires commitment, hard work, and a willingness to take risks. But if you think and act the right way, you can make your ideas come true and bring your vision to life.

EXAMPLES OF WHEN BRAINSTORMING WOULD BE USEFUL.

Brainstorming is a way for a group to solve a problem by coming up with many ideas in a short amount of time. It is often used to develop new ways to solve issues and can be

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

helpful in many different situations. Here are some cases where brainstorming could be beneficial:

Developing a new product or service: Brainstorming is a great way to develop ideas for a new product or service. By asking team members for their opinions and telling them to think outside the box, you can come up with new and creative solutions that might not have been considered otherwise.

Solving a business problem: You can also use brainstorming to solve a problem in your business. Suppose you want to find a way to increase sales, improve efficiency, or solve a problem with customer service. In that case, brainstorming can help you come up with several possible solutions to look into.

Planning an event: If you are planning an event like a conference, workshop, or fundraising gala, brainstorming can help you develop new and creative ideas for activities, themes, and other parts of the event.

Content ideas: If you are a content creator or marketer, brainstorming can help you come up with new ideas for blog posts, social media content, and other types of marketing materials.

Overall, brainstorming can be a helpful way to come up with new ideas or solve problems in several different situations. By letting people on your team think freely and offer a variety of ideas, you can come up with creative solutions that you might not have thought of otherwise.

WHAT CAN MAKE A BRAINSTORMING SESSION GO WRONG?

Brainstorming is a creative and helpful way for a group to develop ideas and solve problems. But many things can go wrong during a brainstorming session. Here are some of the most common reasons why brainstorming sessions can go wrong, as well as ways to avoid them and make your sessions more productive:

Lack of structure: With a clear plan or agenda, brainstorming sessions can quickly devolve into chaos and save time. To keep the session on track and task, it's important to set ground rules and a transparent process for coming up with ideas.

Lack of participation: Some team members may be shy or hesitant to share their ideas, making the discussion less diverse and creative. Encourage everyone to participate, and if you want more people to experience it, you could try something like letting people submit ideas anonymously.

Lack of diversity: If the people in the group don't have different backgrounds, experiences, or points of view, they might only talk about a few ideas and solutions. Try to include other points of view in your brainstorming sessions to get more creative ideas.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

The dominance of a few people: If a few people with strong personalities take over a conversation, it can discourage others from joining in and make it hard for people to work together. Encourage everyone to share their ideas, and use techniques like "round-robin" to ensure everyone gets a chance to talk.

Criticism and negativity: A negative or critical attitude can stop progress and stop people from being creative. During the brainstorming process, try to create an environment where people are positive and open-minded.

Using these tips can help make a brainstorming session more successful and productive. This will help you come up with new and creative ideas.

BRAINSTORMING TECHNIQUES

Brainstorming is a tried and true way to come up with ideas and find solutions to problems. There are many ways to go about the brainstorming process, such as by drawing ideas on a whiteboard or using virtual sticky notes. The "Six Thinking Hats" method has become popular because it encourages people to look at a problem from different angles by putting on different "hats," or points of view. The "SCAMPER" method is another way to solve problems. It involves thinking of different ways to change, combine, adapt, magnify, put to a different use, get rid of, or rearrange parts of a problem. "Round Robin Brainstorming," in which ideas are passed around a group, and "Quiet Brainstorming," in which people write down their ideas in silence before telling the group about them, are two more techniques. No matter how you do it, good brainstorming techniques encourage creativity, teamwork, and thinking outside the box.

STORYBOARDING

Storyboarding is a visual representation of a film, video, or graphic design project that breaks down the content into individual frames or scenes. It's a way to plan out and organize the parts of your project, and it can also be a great way to come up with new ideas and think outside the box.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

WHAT DOES A STORYBOARD HELP YOU TO DO?

Organize your thoughts

Plan your video more effectively

Communicate your ideas to other people

simplify everything that comes later

How Does This Brainstorming Technique Work?

One common way to start storyboarding is by coming up with ideas and drawing rough concepts. This can be done by yourself or with a group. There are many ways to do this, such as free writing, mind mapping, and thinking outside the box.

Once the ideas have been made and improved, they can be turned into rough sketches or images that show the different scenes or ideas in the project. The goal is to quickly ascertain the general idea and flow of the project, so these sketches should be simple and rough.

The next step is to put the sketches together in a way that makes sense, considering the story's overall arc and flow. This could mean putting different drawings in a separate order, combining them, or adding new ones as needed.

Lastly, the storyboard can be improved by adding more details and making the sketches more straightforward. This could mean adding dialogue, captions, or other things that help the ideas come across more clearly.

How to Use This Technique

Using creative exercises beyond traditional brainstorming is one way to approach storyboarding. Mind mapping starts with the main idea and then connects it to other ideas. You could

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

also use prompts or word associations to develop new ideas, or you could doodle or draw to help you see what you are thinking.
You can also use a "what if" approach to storyboarding, in which you think about different possible outcomes for your project. This can help you think outside the box and come up with ideas you wouldn't have thought of otherwise.
Storyboarding is a great way to bring your creative ideas to life, organize your projects well, and plan well. It's a great way to get your ideas down on paper and bring them to life, whether you're working on a film, video, or design project. So, it is a great way for creative people to work.

MIND MAPPING

Mind mapping is a way to use pictures to help you develop ideas, organize them, and talk about them more clearly. It involves making a diagram that shows how subtopics, details, and connections spread out from a central topic.

How Does This Brainstorming Technique Work

It helps you see how all of your ideas fit together and how

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

they fit into the whole. It can also help you develop new ideas by getting you to think creatively and find links between things that don't go together.

It also helps you organize and put your ideas in order of importance. You can highlight the most essential concepts with different colors or symbols, and draw lines between ideas that go together to show how they fit together.

How to Use This Technique?
To use this technique, start with a blank sheet of paper and put your main idea or aim in the center. Then, draw lines outward, naming each one with the subtopic or notion to which it connects. You can also include symbols, colors, and pictures to help describe your notions and make the mind map more visually appealing.

WORD BANKING

Word banking as a creative activity involves creating a list of words or phrases related to a certain topic or theme. This method is often used in brainstorming sessions to come up with a lot of ideas that can then be improved and built on.

How Does This Brainstorming Technique Work?
Word banking can be done in a few different ways. One way is to start with a big idea or theme and then come up with a list of words or phrases that go with it. For example, if the theme is "summer vacation," you might think of words like "beach," "sun," "swimming," "camping," and so on.

Another way to spark your creativity is to use prompts or triggers. For example, you could use a list of words like "adventurous," "relaxing," and "exotic" to help you come up with ideas. You could also use pictures or other things you can see to help you think.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

How to Use This Technique?
Follow these steps to use the word banking method:

Choose a topic or theme: This could be a problem you're trying to solve, a product you're trying to sell, or anything else you want to develop ideas for.

Gather a list of related words or phrases: Write down as many words or phrases as possible that have something to do with your topic. You can find these words using a thesaurus, a dictionary, or your own knowledge.

Organize the words: Once you have a list, put them into categories or groups that make sense. This can help you see patterns and connections between the terms and give you new ideas.

Generate ideas: Use the words on your list to help you develop ideas for your chosen topic. For instance, if you are trying to think of ideas for a new product, you might combine words from different categories. You could also develop marketing ideas, write content, or solve problems with the terms.

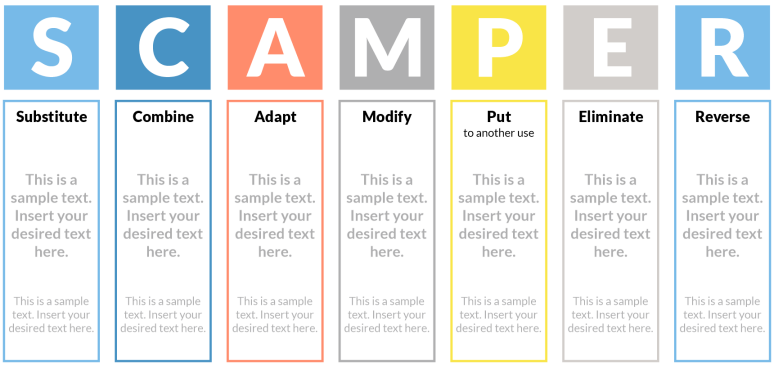

Refine and select the best ideas: Once you have a list of ideas, go over them and make them better. Think about which ideas are the most practical, unique, or helpful, and choose the ones you think have the most potential.

Word banking is a simple method that can help you develop many different ideas and think more creatively. You can create new ways to solve problems or creative ideas for marketing and product development by making a list of related words and using them to spark ideas.

S.C.A.M.P.E.R.

"S.C.A.M.P.E.R." is a creative tool for developing new ideas and finding solutions to problems. It is an acronym for Substitute, Combine, Adapt, Modify, Put to Another Use, Eliminate, and Reverse.

Substitute
This means that one part of a product or process is switched out for something else. For example, you could use a viral video instead of a traditional ad campaign.

Combine
This means putting together two or more things differently. For example, you could combine the ease of shopping online with the personalized service of a store with actual walls.

Adapt
This means changing an idea or product that is already out there to fit a new market or situation. For instance, translating the instructions and packaging could change a product to be used in a different country.

Modify

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

This means making minor changes to an existing product or idea. For instance, you could change a product by adding new features or changing its packaging.

Put to another use
This means finding a new way to use a product or idea that already exists. For example, you could make a tote bag from an old T-shirt.

Eliminate
This means taking something out of a product or process. For example, you could eliminate the need for a storefront if you only sold things online.

Reverse
This means changing the direction or order of a process. For instance, you could change the way people usually apply for jobs by having them make a video pitch instead of filling out a form.

How Does This Brainstorming Technique Work?

The S.C.A.M.P.E.R. technique can help you get creative and develop new ideas. It's a way to solve problems in various fields, from business strategy and design to marketing and product development.

How to Use This Technique?

Substitute, Combine, Modify, Put to another use, Eliminate, and Rearrange is how to use the S.C.A.M.P.E.R. to break out of your typical thought patterns and come up with fresh, creative ideas. It's beneficial when trying to solve a problem or develop a new product or service. So next time you're feeling stuck, try using the S.C.A.M.P.E.R. technique to spark your creativity and come up with creative solutions!

S.W.O.T. ANALYSIS

Welcome to the world of S.W.O.T. Analysis, a powerful brainstorming tool that helps businesses assess their strengths, weaknesses, opportunities, and threats.

Strengths

These things inside your company give it an edge over its rivals. For example, you might have a very skilled team, new products, or a good reputation for your brand.

Weaknesses

These are the things inside your company that could slow it down. For instance, you might have a small budget, old technology, or need more knowledge in a certain area.

Opportunities

These are things outside your company that could help it grow. You might be able to enter a new market, work with a company that complements yours, or take advantage of a new trend.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Threats
These are things outside your company that could be a problem. For example, you might have to deal with tough competition, changes in customers' wants, or problems with the law.

How Does This Brainstorming Technique Work?
The S.W.O.T. (Strengths, Weaknesses, Opportunities, and Threats) brainstorming technique analyzes a situation or project by looking at its internal and external factors. It is used a lot in business and marketing to determine the most important things that could affect a company or product.

How to Use This Technique?
The following is how it works:

- Choose the project or situation you want to look at. This could be the launch of a new product, a marketing campaign, or a business plan;
- Get a group of people who know about the situation or project together. This could include employees, people with a stake in the business, or experts in the field;
- Start by listing everything in your control that could affect the situation or project. These are the good things about the company or product and the bad things about it;
- Next, list all outside factors that could affect the situation or project. These are the opportunities and risks that the company or product may face.

Think about how each factor might affect whether the situation or project works out. For example, a unique selling point that distinguishes a product from its competitors could be a strength. At the same time, a lack of resources or skills

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

could be a weakness. A company may see a new market as an opportunity, while a new competitor entering the market may be seen as a threat.

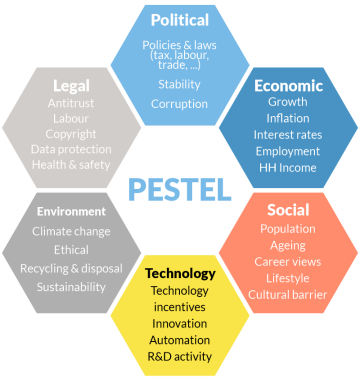

Once you've identified all the variables, you can use that knowledge to make fact-based decisions about the situation or project. For example, you can try to make the most of your strengths and opportunities and minimize your weaknesses and threats.

Tips for Brainstorming Your SWOT

The key to a successful brainstorming session is encouraging open and honest discussion, questioning assumptions, and being specific and concrete when naming factors. Following these tips, you can use the S.W.O.T. technique to analyze a situation or project and make intelligent decisions.

Utilize a PESTEL Analysis

A PESTEL analysis is a method for finding and analyzing the outside factors that may affect a business or organization. PESTEL stands for political, economic, sociocultural, technological, environmental, and legal aspects.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Be Specific By Avoiding Platitudes While Conducting Your SWOT Analysis

When conducting a SWOT (Strengths, Weaknesses, Opportunities, Threats) analysis, it's essential to be specific and avoid platitudes to get the most value from the exercise. Platitudes are vague, overused statements that don't provide any real insight or value.

Analyze The Strengths of Your Company

Follow these steps to do a SWOT (Strengths, Weaknesses, Opportunities, and Threats) analysis of your company's strengths:

- Put together a group of people who know the company and how it works. This could include employees, people with a stake in the business, or experts in the field;
- Start by listing all the things inside the company that could affect its success. These are the company's strengths;
- Ask the team to list the good things about the company, like its unique selling point, talented employees, or strong brand recognition;
- Think about how each strength could help the business succeed. For example, if the company has a strong brand, it may attract new customers. If the company has a talented staff, it can come up with new ideas and stay ahead of competitors;
- Be clear and specific when you list your strengths. Use concrete examples and data instead of vague or general language to support your points;
- Think about how each strength affects how the company works, grows, and makes money.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Utilize The UX Brainstorming Model

The UX (user experience) brainstorming model is a technique used to identify and analyze the factors that may impact a product's or service's user experience. It is often used in the field of user experience design to understand users' needs and desires and identify potential problems or challenges.

Try to be Honest With Yourself

You need to be completely honest about the results to get the most out of a SWOT (Strengths, Weaknesses, Opportunities, and Threats) study. The following are some guidelines for doing a simple SWOT analysis:

- **Keep an open mind:** Focusing on strengths and opportunities without ignoring flaws or dangers is essential for a thorough study;
- **Don't make excuses:** It's human nature to want to explain or rationalize away failures, but success requires recognizing and working on flaws;
- **Be bold about getting second opinions:** Being objective when assessing one's business or organization can be challenging. Customers and specialists in the field can provide a different perspective, so it may be worthwhile to get their feedback;
- **Have an open mind to criticism:** Respect the opinions of your coworkers and try to see things from their point of view.

The overall success of a SWOT analysis depends on the user's ability, to be honest, and impartial when listening to the analysis's strengths, weaknesses, opportunities, and threats. It is possible to gain a more accurate understanding of your business or organization and make well-informed judgments when you are willing to be self-critical and solicit the opinions

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

of others.

Strive To Make Your Brainstorming Session Effective

To get the most out of a brainstorming session, it's crucial to ensure everything goes well. Here are some tips for making your brainstorming session effective: Start with a clear goal or problem statement, collect a wide range of people, encourage wild and creative ideas, promote open and honest discussion, don't be scared to confront assumptions, take advantage of suggested starting points to generate new concepts, use visual aids, be specific, and don't forget to take breaks.

Following these tips ensures that your brainstorming session is practical and helps you get the most value from the S.W.O.T. analysis process.

Build Ideas Around Your SWOT Analysis Plan

Think of the results of your SWOT analysis as a jumping-off point for your brainstorming session. Focusing on your strengths makes it easier to see how you can use your strengths to come up with new ideas. Recognizing your weaknesses allows you to work toward improving them or minimizing their effects. In the same way, thinking about the company's threats can help you come up with ways to deal with them or use them to your advantage.

The best way to come up with ideas for your SWOT analysis is to have a brainstorming session with your team. Facilitate an open and honest discussion of the company's SWOT (strengths, weaknesses, opportunities, and threats) during this time. Use this information to come up with ideas for how to move your business forward or solve problems.

When coming up with ideas, it's also a good idea to remember what your target audience wants and needs. You can serve your customers better if you try to guess what they

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

will need and come up with creative solutions to their problems. One way to do this is to come up with a marketing plan that shows potential and current clients how valuable your business is.

Summarize Your Weaknesses

To summarize your weaknesses, you need to figure out where you have trouble or don't do well, and then put them into a short list or overview. So, you can improve in some areas and get better all around, which is good for your personal and professional growth. For example, consider the following while trying to identify your own areas of weakness:

Reflect on past experiences: Recall instances in which you had difficulties or your results fell short of expectations. To what extent did you encounter problems, and how did you ultimately prevail?

Seek feedback: Feedback is essential, so don't be afraid to ask for it from people like teachers, friends, and coworkers. Others have pointed out potential flaws you haven't seen yourself.

Prepare a list: Make a list of every possible area in which you may have difficulty. Stop worrying about how they will be organized, and just start writing them down.

Prioritize: Review your list and arrange the items in order of importance, considering how they will impact your life and work.

Group similar items: Find patterns or themes in your list, and group like items together. It will be easier to spot patterns and zero in on significant problem areas.

Reflect on the root causes: Think about the causes of your difficulties. Could it be because of a lack of knowledge or

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

skills, or maybe because of a problem with self-control or time management?

Write a summary: After putting your development areas into groups, make a quick list of your most important needs. You can use this to keep yourself motivated and on track as you try to overcome these problems.

Check For Possible Opportunities

"Checking for possible opportunities" means looking for new ideas or possibilities that could lead to success or improvement. This can be done through brainstorming and group activities where people generate ideas and explore different options.

By actively seeking new opportunities, you can increase your chances of success or improvement.

Check For Possible Threats

When we talk about "checking for possible threats," we're referring to looking for and assessing potential risks and dangers that could endanger a business, a project, or an individual. This is usually done as part of a SWOT (Strengths, Weaknesses, Opportunities, and Threats) analysis, which is a way to look at the internal and external factors that could affect a company or other entity.

Tips for identifying potential risks during a SWOT analysis include:

- Think about things out of your hands, such as the economy, new technologies, or new regulations;
- Look at the market you're in and think about possible competitors, newcomers, and other options;
- Think about internal factors that could be a threat, like not having enough money, resources, or good

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

management;

- Think about societal or environmental trends that could affect your company or organization, such as climate change, political unrest, or alterations in consumer tastes;
- Natural disasters, cyberattacks, and disruptions to the supply chain are just a few examples of the risks and hazards you should look out for;
- Organizations can handle problems better if they try to predict them by looking for and evaluating possible threats.

Come Up With A Brainstorming Plan

Step 1: Assemble your team.
In a room, at a table, armed with pens and paper.

Step 2: Establish a specific goal.
What do you hope to accomplish, and what problem do you expect to solve?

Step 3: Let your ideas fly.
Write down everything that comes to mind, no matter how wild or crazy.

Step 4: Expand on each other's ideas.
One thought inspires another, and another, and another.

Step 5: Sort and prioritize
Pick the best and most doable ideas and come up with a plan to make them happen.

Step 6: Put your strategy into action.
Convert your brainstorming session into a concrete action plan.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Remember that the keys to a successful brainstorming session are to keep an open mind and be creative. Don't worry about being perfect; let your ideas flow and see where they lead you.

Involve Your Employees

Do you want to increase productivity and morale in your workplace? One method is to include your employees in decision-making and idea generation. To get your creative juices flowing, try out a few brainstorming techniques. These tips can help you bring out the best in your team, from setting clear goals to being open to different points of view. So why not try it and see what amazing ideas your employees can come up with? By letting them take part in the process, you will give them a sense of ownership and engagement and create a culture of collaboration and new ideas. A win-win situation for everyone!

ZERO DRAFT

Have you ever sat down to begin a new project only to find yourself staring at a blank page with no ideas? It can be frustrating and overwhelming, but don't worry; we've covered you.

Zero drafts are a brainstorming technique that allows you to get all your ideas on paper (or screen) without regard for structure or grammar. It's a way to free your creativity from the constraints of perfectionism.

How Does This Brainstorming Technique Work?

The zero draft's goal is to generate as many ideas as possible without regard for structure or organization. You can always revise and organize later; what matters is getting all those brilliant ideas out of your head and onto paper.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

How to Use This Technique?
This technique helps generate ideas and organize them in a way that clarifies the project's overall direction and focuses on it.

Follow these steps to use the Zero Draft technique:

- Begin by defining the project's or task's purpose or goal. This will help narrow the focus and make sure that all ideas are useful and fit with the plan as a whole;
- Next, make a rough outline or structure for the paragraph that follows. This can be as simple as a bulleted list or as detailed as an outline with subheadings and sections;
- Use this outline to help you come up with ideas and content for each section or subsection. At this stage, don't worry about editing or refining your thoughts; the goal is simply to generate as many as possible;
- Take a break and return to the ideas with fresh eyes later. This will allow you to review and evaluate the ideas and determine whether any adjustments or changes are required;
- Once you have a good selection, begin organizing and refining your ideas. This may entail rearranging, combining, or eliminating specific ideas and adding more detail and context;
- If you follow these steps, the Zero Draft technique can help you generate various ideas and organize them in a way that supports your project's overall goal and direction. It's an excellent tool for brainstorming and developing new, creative ideas.

REVERSE BRAINSTORMING

By combining brainstorming and reversing, reverse brainstorming helps you find solutions to problems. By putting these together, you can use brainstorming to come up with even more ideas. Reverse brainstorming identifies methods to cause or worsen an issue rather than providing direct answers. You invert concepts to find new answers. When it's hard to find straight solutions, consider reverse brainstorming. It might reveal hidden flaws in a process or product.

Example of Reverse Brainstorming

1. Some businesses and government agencies place emphasis on data security. The stakes are so high that companies will sometimes employ hackers (including many who have committed cybercrime) to probe their networks for vulnerabilities;

2. Risks can be found by asking questions like, "How can this fail?";

3. Asking, "How could we make this problem worse?" is usually a good way to find a solution.

How Does This Brainstorming Technique Work?

1. With reverse brainstorming, you know right away what to avoid;

2. It's quicker to begin with what not to do than with what to do, because not knowing what to do can leave us feeling stuck;

3. It assists you in not making too many decisions at an early stage of coming up with ideas.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

How to Use This Technique?

1. Create a list of the very worst customers you could sign on with your business, as this will reveal the best leads to pursue;

2. Produce the worst possible advertising copy to get a sense of the tone and language you should utilize;

3. Define what it would mean for your team to fail, and use that information to inform your future plans.

How to conduct a reverse brainstorming session

An outline of how to run a reverse brainstorming session is provided below:

Identify the problem

Start by making the problem clear as a goal that needs to be reached by a certain time or date.

Reverse the problem

In step two, the team takes the goal and turns the expected process around. Instead of coming up with ideas for how to fix the problem, stakeholders are asked to think of ways to make it worse.

Gather ideas

The team then comes up with ideas about the question asked in the last step. A good facilitator is needed to make sure that the team doesn't just keep coming up with solutions.

Reverse the gathered ideas

When the team has used up all of its ideas, the ideas themselves must be reversed.

Evaluate ideas and identify solutions

Now that every bad idea has been turned into a good one, the team can look at them all and decide which one is the

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

best. Ideas can be ranked in any way that makes sense for the business.

5 WHYS ANALYSIS

The 5 Whys may sound familiar if you've ever been questioned by a child. If you respond to a query with an answer, you'll likely be met with a barrage of "Why? Why? Why? Why?"

In essence, the method involves asking "why" five times to figure out where a problem really comes from. This could open up fresh avenues of thought, allowing for the development of an original approach to the subject at hand.

How to Use This Technique?
When using the 5 Whys method, you want to get to the heart of the problem so that you can fix it. In fact, the 5 Whys may show you that the problem is caused by something you didn't expect. Often, problems that are thought to be technical end up being people and process problems.

This is why it's important to find and get rid of the root cause if you don't want to keep failing over and over again.

Five Whys – An Example
Using a famous example from Benjamin Franklin's Poor Richard's Almanac, we could ask the following series of why questions:

- Why was the kingdom lost? Because the battle was lost;
- Why was the battle lost? For want of an army;
- Why was the army lost? For want of a rider;

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

- Why was the rider lost? For want of a horse;
- Why was the horse lost? For want of a horseshoe;
- Why was the shoe lost? For want of a nail.

Benjamin Franklin said a missing nail meant a lost empire. This Five Whys examination doesn't identify the root cause. Why was there no nail? When using the Five Whys, it's virtually always a failed process. Keep asking "why?" until a failed process is uncovered.

Implementing the 5 Whys Method in practice

The 5 Whys technique can help your organization improve continuously. Here are the principles:

1. Assemble a team

Create a cross-department team. Each representative must know the investigation process. Cross-functional teams offer unique perspectives. So you can make an informed decision. This is a team-based, not individual, task.

2. Identify the problem.

Discuss and state the problem with the team. It helps define the issue's scope. This is important because investigating a broad problem can be time-consuming and unclear. Focus on finding a good solution.

3. Ask why

Next, a mediator asks why. Answers to questions should be based on facts or hard data. It shouldn't rely on team members' emotional answers. As long as the problem is possible, the team should advance through each stage. Some root causes can be found in fewer than five steps. Others might need more.

4. Identify the solutions

After determining the root cause, solutions must be

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

established. Many firms employ the "5 Hows" strategy in solution creation, which isn't part of the "5 Whys" process. This includes asking "How?" five times for each root cause to get the solution. Regardless of how solutions are formulated, the firm must test them. If they're ineffective, try the 5 Whys method again.

Five Whys - Cause-and-Effect Chart

A cause-and-effect chart, or fishbone diagram, identifies all contributing factors. It's used to analyze the Five Whys results to confirm the root cause. Start by writing a problem definition in the middle of the right side of a sheet of paper. From the definition, draw a horizontal line.

Five Whys results and brainstorming to identify potential problem causes. Smaller lines connected to the horizontal line create a fishbone pattern. Continue brainstorming contributing factors for each potential cause. These ideas are added to each cause line. This can be repeated to create a 3- or 4-layer diagram. After brainstorming, each cause can be examined. This helps identify the problem's cause(s).

Benefits of the Five Whys

1. The Five Whys is a simple, useful, easy-to-learn, and quick way to figure out what the real problem is. The key is to ask "why" enough times so that the real root cause can be found. This is something anyone can learn;

2. The Five Whys can help find more than one possible root cause. This lets the relationship between the different possible root causes be found and looked at;

3. It's simple to do;

4. The Five Whys is a quick way to figure out what's really going on, and they don't require much preparation.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

The problem is easy to find and can be fixed with little downtime and a few extra resources.

The Five Whys method is a simple but powerful way to get to the bottom of things. A lean tool that everyone should have is the ability to keep asking "why" until the root cause is found.

STARBURSTING

Starbursting is a question-focused brainstorming approach. Starbursting is an organized brainstorming method that helps product teams cover all bases. It uses a set of questions to systematically go through product creation, forcing teams to assess ideas.

Applying the starbursting method

Starbursting requires three steps. A skilled facilitator should manage the debate and ensure that every group member contributes.

Step 1 – Create a six-point star

Teams can create a star or find a template online. In the star's center, write the project's name. Then name each point who, what, how, where, when, and why.

Step 2 – Brainstorm potential questions

Second, generate questions without answering them (Aim for three questions per point).

- **Who** will use/develop the app? Who are the rivals? Who will sell/make the product?
- **What** dimensions? What kind of packaging? Which price is best?
- **When** could production begin? Marketing starts when? When will products need updates?

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

- **Where** will it be sold? Who'll pay?
- **Why** design the product? Why is it marketable? Who will use it?
- **How** will the product be promoted? How will it complement other items?

Step 3 – Formulate answers
In the last step, the team should answer each of the questions that were raised above in a short way. It's important to know that starbursting is a way to come up with ideas, not a way to make an action plan. Also, the answers from step three will give the team important information that they should use before moving on with product development.

How to Use This Technique?

Starbursting is a great way to make decisions and solve problems. It helps teams find solutions by asking deeper questions that help them plan their ideas more strategically and put them into action better.

In other words, teams can make sure they come up with the right answers by asking the right questions. Starbursting helps teams come up with questions to ask about an idea so that they can test it with confidence and in-depth.

The goal of the method is to come up with a lot of questions for each point, often dozens per group. This helps the team evaluate new ideas in a methodical and iterative way, laying the groundwork for making good decisions and giving them a clear path forward.

How Does This Brainstorming Technique Work?

Starbursting can be used in practically any debate, especially when developing creative ideas. It is beneficial when:

- **Choosing an option:** The starburst technique might

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

help you choose among multiple possibilities. Which option benefits whom? What are the choices? How should each choice be used? Which choice is better? When can we do each? How can we put each option into motion?

- **Generating ideas:** Starbursting can generate new thoughts. Who is this concept for? What are we hoping to accomplish? Where will this occur? Why do this? When can we start? How can we implement this?

- **Problem-solving:** Explore all sides of a problem before choosing the best answer. Start starburst questions with; Who's affected? Problem? Where's the problem? What causes this? When must we fix this? What's the solution?

Exploring starburst questions might spark innovative thought while establishing a new product or service. Why? Who's the target market? What does it offer? We'll make it where? When should we publish? Why should people buy this? How will we design the production process?

ROLESTORMING/FIGURE STORMING

Rick Griggs, an expert on personal growth, was the first person to use the term "rolestorming" in the 1980s. Rolestorming is a brainstorming method in which people share their ideas and thoughts by pretending to be someone else.

Rolestorming is used to help a group of people who are trying to come up with ideas to get over their fears during a meeting. In theory, when each team member pretends to be someone else, they are more likely to come up with creative ideas. Rolestorming isn't an idea-generation process by itself. It should complement existing brainstorming methods.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Rolestorming types
Every approach to "becoming" someone else has pros and cons. You must select the best approach for your situation. To keep things interesting, use alternative methods.

Rolestorming involves "trying on" multiple personalities. Participants could become:

- A hard-to-please client;
- An executive;
- A historical individual known for a certain way of thinking;
- A fictional character with a certain mindset'
- Superhero or supervillain.

How to Use This Technique?
Being creative requires guts. We hesitate to share new thoughts with others. Role-storming lowers inhibitions via fun, stupidity, and laughter. Use this strategy to share ideas and see things differently:

- Identify and allocate positions: They can be tied to community sectors, coalition roles, or silly;
- Ask: How does this person see the world? How does he solve problems? Who are they?
- Let the show begin! Brainstorm as your character. Save your ideas;
- If everyone is out of ideas, assign new roles and try again.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

How Does This Brainstorming Technique Work?

Role-storming is a simple way for employees to get creative and share their ideas in a group without feeling shy. During role-storming sessions, it is very important that the roles are played in a respectful way. When it comes to a well-known person in the organization, this situation should be handled with great care. There shouldn't be any chance that certain character traits will be used or shown in a way that is harmful.

Preparation for Rolestorming

Rolestorming is more difficult than group brainstorming, so be ready. First, find a facilitator who can handle this unique brainstorming process and others. This person must be comfortable with silliness, unpredictability, and leading without dictating. The facilitator should have acting experience, if possible.

Choose a notetaker and explain their role. In addition to noting thoughts and conclusions, the notetaker must extrapolate from the role play. If Mary, as a client, complains, "the lines are always busy," the note taker should write it down, even if not instructed.

Plan your rolestorming and put it in writing, including roles, interactions, timing, and follow-up. You may want to limit possible roles to actual people or incorporate imaginary ones. You may want each character to speak or interact. Know how you'll end the session and how you'll use the results.

Implementing Rolestorming

1. Regular brainstorming and brainstorming sessions help workers think creatively. The obvious will get more attention;

2. Roles By assigning roles in advance, employees may

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

better identify with one another. Individual or group roles are options. Employees are consulted. The chosen role cannot be a group member. To identify a character, it's best to have some background information. The role need not be related to the problem;

3. Putting yourself in someone else's shoes helps you focus on the figure/character for a few minutes. This strategy could use these questions — Who is this character? How does this character view society? What would this character do? How strong is this character?

4. Role Storming: Everyone brainstorms from their roles. In their new responsibilities, individuals can provide ideas and view problems from fresh angles. By encouraging 'I' form speech, my character sees an opportunity. Each rolestorming player must talk;

5. Repetition: If the sessions don't create enough fresh ideas, continue the technique with 'new' roles. Continuity matters. Regular rolestorming sessions help staff become accustomed to the process.

GAP FILLING

Gap filling, often called gap analysis, needs you to determine your current state and end goal. It asks, "How do we get there?" Gap analysis helps issue solvers find workable solutions.

Flowcharts or mind maps can aid with gap analysis. Mark the current and ideal states. Then team members will know what they're working toward and start giving suggestions.

How to Use This Technique?

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

1. First, know what to analyze. Pick a problem area from finance, product quality, marketing, etc. In marketing, social media marketing is a distinct area. Specificity helps in gap analysis;

2. Now that you know where to improve, make goals. These goals should be achievable within the time limit you designate and correspond with your business goals;

3. Know where you are before moving forward. You'll assess the situation in this step. Gather as much information as you can about your performance by reading reports or process documentation, talking to people, and coming up with ideas;

4. Remember your goals in the second paragraph? Achieving these goals will help you reach your business's potential. Define the optimal business state;

5. Now that you understand your current and future states, it's easy to discover what's holding you back. After identifying holes, develop solutions.

How Does This Brainstorming Technique Work?

After identifying gaps, investigate why they exist and what to do about them. There are several gap analysis models available. Gap analysis tools are given below:

1. **SWOT** identifies internal and external strengths, weaknesses, opportunities, and threats. It helps you gauge your industry or market standing;

2. **Fishbone diagram** helps you identify the root cause of an issue or effect;

3. **McKinsey 7S** can help you understand business gaps

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

and optimize performance;

4. **Nadler-congruence** Tushman's model identifies performance gaps.

BRAIN-NETTING

Brain-netting is a dematerialized, digital collective thinking technique. Brain-netting has become popular in modern workplaces with virtual collaboration and remote teams. Emails can be effective but time-consuming and formal.

Principle of Brain netting

The method is to bring different people together virtually, through the Internet, for a group brainstorming session. With a dedicated collaborative tool, everyone in the group can share their ideas and solutions and talk to each other in real time or later. They can do this from their phone, tablet, or computer.

The idea is that this virtual brainstorming is like a traditional group brainstorming workshop, except that all the people involved are not in the same room. Everyone comes up with their own ideas and then shares them on a collaborative

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

platform. Most contributions are made anonymously so that everyone can take part.

Advantages and limitations of Brain-netting

The approach is based on specific advantages, such as:

1. Posts can be made anonymously, which encourages people to be more active and creative;
2. Teams that are in different places can talk about their work more easily as a group;
3. Saving time and money on organizing meetings for teams that are spread out;
4. It is possible for people to post at different times.

But there are some disadvantages:

1. When people have to think about the same thing at the same time, it can be hard to find a time that works for everyone (because of time differences, full-time vs. part-time jobs, or trouble connecting because of where people live, for example);
2. Problems with how well the software and applications used work with the hardware of the participants (especially Mac and PC);
3. Problems with how the software or application was used (more or less long training depending on user profiles);
4. Hard to put together as part of a quick reflection;
5. How well people think in relation to the manager or facilitator.

How to Use This Technique?

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Brain netting is just coming up with ideas on the internet. But there are many creative ways to do it, like group calls, chat apps, video conferencing, and much more. No matter how you do it, you need an online whiteboard to keep track of your ideas and plan things out.

How Does This Brainstorming Technique Work?

When the following things happen, remote brainstorming is especially interesting:

Employees in telework
Part-time workers who do not work the same hours as each other
People who worked together were in many places.
A large number of people were split into smaller groups and put in different rooms.

The following goals were set:

- Problems solving
- Innovation
- Plan for marketing and communication decisions

Brain-Netting Tools

Tool for Brain-Networking From the Basic to the Complex:

Brain-simplest Netting's form, which can be used for both virtual teams and teams with shy or hesitant members, is to ask team members to email their ideas to a central place for review. Once you get past that very simple method, you have a lot of choices:

- **Group calls** are the traditional way of coming up with ideas out loud, using group connectivity. You get everyone in your group to talk together using

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

voice-only, video, or shared-screen chats. There are many places that offer these kinds of services, and most of them are cheap or even free. Two of the best providers are ConferenceCalling.com (pay-per-use) and FreeConferenceCall.com (free);

- **Chat apps:** Slack, Yammer, Sribblar, and a few others let you share emails based on what you're interested in, how private they are, and more. You can make small chat rooms for a small group of collaborators, or you can share information and ideas with a much larger group. You can also talk with a group through forum software or project apps like Trello or Basecamp;

- **Video Conferencing:** This is the next step up, and you can share not only videos of each other, but also your computer screens. It's great to be able to show people the website or software you're using while talking out loud about it. Skype, Zoom, GoToMeeting, and UberConference are some of the best choices for this kind of service. Google Hangout is another option, but it isn't as good for business purposes.

ROUND-ROBIN BRAINSTORMING

Round-robin brainstorming is a way to come up with ideas as a group and in small steps. Brainstorming is a good way for an organization to come up with new ideas. Round-robin brainstorming is a balanced method that uses a circular, iterative process that builds on what each person has said before.

How to Use This Technique?

Round-robin brainstorming is a way to come up with ideas as a group and in small steps. Brainstorming is a good way for an organization to come up with new ideas. Round-robin brainstorming is a balanced method that uses a circular,

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

iterative process that builds on what each person has said before.

How Does This Brainstorming Technique Work?
This strategy works well for teams that are in the middle to large size range and have some quieter members or a clear difference in the number of creative contributions from each member. The most important rule for this method is that all ideas should be treated equally. Give each teammate the same amount of time and attention when they talk, and don't build on any ideas until everyone has had a chance to share. If a team member says, "Person X already said my idea," give them time to think of something else while the round-robin is going on.

Implementing a round-robin brainstorming session
Teams should know that it's not hard to set up a round-robin brainstorming session. Follow these steps:

- Set the group up in a circle and give each person an index card to write down their ideas;
- Then, the facilitator describes the problem that needs to be solved and the company's goals. At this point, the group leader can take questions, but should try to stop people from talking to each other;
- In the third step, each person needs to think of ideas by themselves;
- After brainstorming, everyone should tell the person next to them what they thought;
- Then, each person on the team should use the idea of the person next to them to come up with a new idea. In some versions of round-robin brainstorming, each person says what risks or problems their idea might face. The neighbor card that was swapped in the last

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

step should be given to the person running the game. Then, each person gives their new idea to the next person, and step four starts over again;

- The process of swapping should go on as long as the facilitator thinks it's important. The group should collect ideas, talk about them, and then vote on the best ones.

Advantages and disadvantages of round-robin brainstorming

Advantages

- The silent, collaborative, and iterative approach give all ideas the same chance to be thought about and improved;
- The process of coming up with ideas can pick up speed as it goes around the circle. This can lead to ideas that might not have been thought of in a traditional brainstorming session. Momentum can also make teams feel like they have the power and confidence to act on ideas that are bigger or more creative.

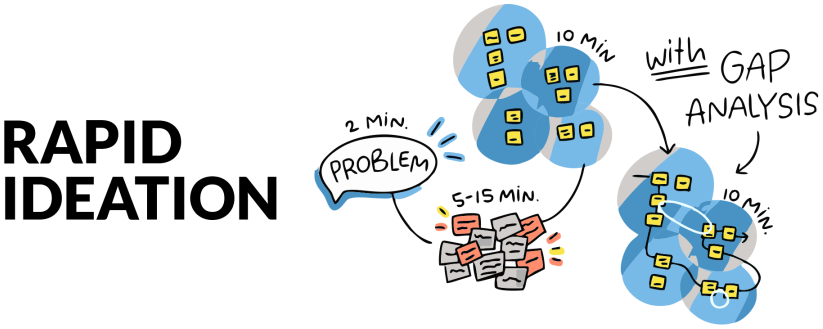

Disadvantages

- Some people say that if ideas can't be kept secret, some team members might not share them. Even though each idea card doesn't have to have a name on it, the process doesn't make it hard to connect an idea with a specific person.
- The effectiveness of round-robin brainstorming can be limited because each team member can only build on the idea of the person sitting next to them. It's not possible to get everyone in the group's thoughts on a single idea.

Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

RAPID IDEATION

In rapid ideation, everyone writes down as many ideas as they can in a set amount of time before any ideas are talked about, criticized, or developed. For this method of coming up with ideas, you will need to set a time limit and stick to it. If you don't, you risk losing the sense of urgency.

How to Use This Technique?

Working with a limited amount of time can often lead to better work. In fact, Parkinson's Law says that "work grows to fill the time available to finish it." Rapid ideation takes advantage of this fact. Team managers can get the most done and get the best results by giving team members a set amount of time to come up with as many ideas or solutions as they can.

How Does This Brainstorming Technique Work?

Rapid ideation works well for a few different types of workers. For teams that don't like meetings or who tend to get off track, rapid ideation is a great way to approach the brainstorming stage of a project.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Get silly! That's a good thing to remember. Research shows that teams who tell funny or embarrassing stories about themselves share 26% more ideas in 15% more categories than teams who keep meetings more formal. When people have the space to let down some social barriers, they think less and come up with more ideas.

STEP-LADDER BRAINSTORMING

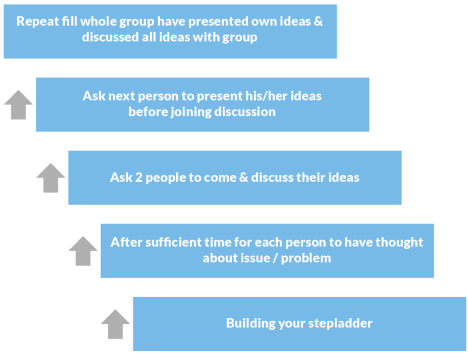

The step-ladder technique is an innovative and intricate method for making group decisions. In certain circumstances, it is deployed to urge every group member to contribute to the conversation. It prevents situations in which only the loudest ideas are heard, not the finest ones.

How to Use This Technique?
The facilitator announces the topic of discussion to the group and then sends everyone in the room except two members out. These two people talk about it for a few minutes and develop some ideas. After the two people have had their time, a third person enters the room and explains his concepts to them before hearing the two people out. This cycle continues until every member has expressed an idea or opinion.

How Does This Brainstorming Technique Work?
This brainstorming technique works best in groups with less extroverted individuals.

Implementing the stepladder technique
There are five general steps to the step-ladder technique.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Explain the problem

This is the first step. Here, the facilitator speaks privately with every individual in the group. They explain the task at hand to the group members before the group reassembles to brainstorm. This step allows the team to develop their notions concerning the assignment.

Build the ladder

After sufficient time has passed, the facilitator organizes a foundation group of two. The two members brainstorm and exchange ideas. The facilitator puts this group in a comfortable, private environment to encourage them.

Continue the process

After the initial two members have properly discussed and exchanged ideas, a third person is invited to join them and share his perspective on the issue. This third person is asked to share his opinion without hearing the other members' discussion. This technique promotes originality and avoids group-think and adulterated views or perspectives.

Complete the ladder

At this stage, more and more members are added to the group, one at a time, in the same fashion as the third step.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Making a decision

The team must ensure they have exhausted every possible discussion regarding every member's idea. After all, different points of view have been taken into account, so the team can only choose the most obvious solutions. This promotes creative thinking.

Weaknesses of the stepladder technique

Like any man-made system, the step-ladder technique has its shortcomings. Some of these weaknesses that organizations should pay attention to are:

Tokenism

This technique is intended to be very inclusive, but it could be reduced to a mere symbolic effort with no substantial results if not approached correctly. For instance, groups with very few public speakers might need help in situations where only the most influential speakers dominate the discussions. A situation like this could result in idea redundancy and discourage less influential members from bringing opposing viewpoints to the table.

Efficiency

The procedures involved in this technique could negatively affect efficiency. Due to its staggered approach, large teams would be forced to consider other decision-making techniques. This is because, for large groups, this approach would be time-wasting. On the other hand, this technique would be more profitable for groups with 4–7 members.

Utility

This method could be bad for a group or team that needs to solve many problems and make many decisions. It would prompt several cycles of the same routine. It would be a lot worse if a large team was caught in this loop. It would be impractical, exhaustive, and incredibly time-wasting.

How Now Wow

The How Now Wow technique is concerned with organizing ideas based on how unique they are and how easy they are to tackle.

How to Use This Technique?

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

The group is broken down into smaller teams. The person leading the session tells the team what the topic is and gives them 30–60 minutes to talk about it and come up with ideas. These ideas are organized based on originality and complexity. The ideas with originality and ease of implementation are under the "Wow" column. The ideas in the "Wow" column are put in order of importance and set aside until after the session, when they can be worked on further.

How Does This Brainstorming Technique Work?
The technique is based on the How Now Wow spectrum:

1. How ideas are original ideas but are not feasible;
2. Now ideas are unoriginal ideas that are easily executable;
3. Wow ideas are original ideas that are easy to implement.

DRIVERS ANALYSIS

This brainstorming technique is an approach that analyzes the causes of a problem. This technique is beneficial because it works on two levels: the individual level and the group level. It is aimed at adequately vetting ideas and opinions. It raises the critical question, "What causes ___?" When you know the cause of a problem, you're one step closer to finding a solution.

How to Use This Technique?
In order to get the most out of this approach, there should be a general knowledge of the problem. The group leader should announce the topic and give room for discussion. After a few minutes, the team members are to ask questions like, "What causes this problem?" When there is an available answer to the first question, the leader should ask a follow-up

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

question, "What caused the answer to the previous question?" This cycle continues until the team gets to the problem's root.

How Does This Brainstorming Technique Work?
This technique works similarly to a cause-and-effect analysis. Here, the team members ask probing questions like, "What?" and "Why?" This technique works in conditions where there is limited time and budget. It is effective at honing in on a company's challenges.

BRAINWRITING

The "brainwriting technique" is one of the quiet brainstorming techniques. It is an excellent alternative to traditional brainstorming techniques, as it caters to a group with mixed personality types—introverts, ambiverts, and extroverts. It is especially recommended for groups with introverted personalities.

This technique takes a non-verbal approach to problem-solving. The group members are asked to write down their ideas, opinions, solutions, etc. This ensures the production of unadulterated thoughts. The general principle of this technique is to separate idea generation from discussions. It is particularly effective because it removes all the pressure of interruption while speaking or raising one's hand to get their point across.

Brainwriting vs. brainstorming
Brainwriting is a better alternative to the traditional brainstorming technique for the following reasons:

Benefits of brainwriting
Brainwriting is a better alternative to the traditional brainstorming technique for the following reasons:

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

1. It ensures that every member of the group contributes to the discussion;
2. It reduces the risks of social anxiety;
3. It promotes originality and unadulterated ideas;
4. It promotes creative thinking.

When to use brainwriting

This technique is highly recommended for groups with competing or mixed personalities. It could be very effective in a small group with an inexperienced moderator. The facilitator could easily organize the group and allow some time for the members to put their thoughts on paper.

How to Use This Technique?

In order to ensure the efficiency of this approach, the following steps should be taken:

Clarify the rules and parameters

Explain to the team the rules and general idea of the technique. If there are rules regarding the number of ideas to be written down or whether there should be a prior discussion or not, they should be well communicated.

Identify the problem or question to be answered

This is the second step. You are to identify the question or questions to be answered.

Have participants write down their ideas in a set amount of time

There should be an allotted time for every brainwriting session. There should be short time limits (3–10 minutes) to maximize efficiency and creativity. The brainwriting leader should also serve as a timekeeper.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Share all the answers in one place
At the end of the session, all the recorded answers or ideas should be shared in one place for all members to see and discuss.

How Does This Brainstorming Technique Work?

Briefly explain the general idea of the discussion to the team and ask them to write down as many ideas as they can think of. They are to do this first phase independently. At the end of the brainwriting session, the members can reassemble to discuss the topic. The brainwriting technique is very successful when working with introverted groups.

Brainwriting techniques

There are a few variations to the usual approaches to the traditional brainwriting technique. These are:

- 6-3-5 brainwriting;
- Collaborative brainwriting;
- Remote brainwriting.

6-3-5 brainwriting
This is a simple modification of the standard brainwriting exercise, where a group of six people each write down three ideas on a worksheet in five minutes. Each individual gives their sheet to the next person to add another three ideas after the five minutes are over.

This process is repeated six times (until the worksheet is completed and each individual obtains their original paper back, completely filled with thoughts). You ought to have 108 ideas that are written down and prepared for review after the process is complete.

This method is very effective in large groups.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Collaborative brainwriting
This is recommended for informal meetings. The bulletin board method is used to encourage idea generation. It is a more relaxed and adaptable technique. All that this approach requires is a fixed space (a board or wall, for example) and a willing team. Whoever the team leader is, they can write the prompt or topic on the board. Over the course of a few days or weeks, the team members can put their suggestions or ideas on the board at their own convenience.

Remote brainwriting
Remote brainwriting is just like collaborative brainwriting. The only difference is that the fixed space is virtual. The platform could be a blog, Google Sheets, or websites like Reddit.

The team members are given a certain amount of time to respond, but they can do so whenever they want.

LIGHTNING DECISION JAM

The lightning decision jam is a brainstorming technique that takes 40 minutes to an hour to complete (known as the LDJ). AJ&Smart, a design agency in Europe, created it.

An LDJ is a valuable tool for collaborative problem-solving. It is a structured process that gives a team 30–60 minutes to find, map out, and come up with solutions to open-ended problems that don't have clear answers or ready-made solutions.

Why we use Lightning Decision Jams
We use this technique to:

- Identify and define the parameters of the problem;
- Come up with as many solutions as possible;

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

- Determine the next step based on the effort and impact matrix;
- Decide on the next actionable tasks.

How to run a Lightning Decision Jam

There are a few steps required for the successful operation of this system. They are:

Start with problems

The moderator allotted seven minutes to the team. During this period, the team members are expected to write down all the important challenges, grievances, or concerns that arose during the week.

Present problems

The moderator gives every member four minutes to explain what they have written down. Within this time, no one apart from the member with the floor is allowed to speak.

Select problems to solve

The moderator gives each member two voting dots. The moderator uses these voting dots to prioritize the most significant issues.

In six minutes, each member is to move their dots to the post-it with the most pertinent problem. If one is confident in their choice, they can place two dots on one post-it.

At the end of the exercise, the moderator arranges the challenges based on the number of dots on the post-it.

Reframe problems as standardized challenges

The moderator reformats the prioritized problems as standardized challenges. He or she rephrases the problems on the post-its as “how might we” questions. This step makes the problems or questions appear more solvable.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Produce solutions
For seven minutes, the top-voted “How might we” problem is used to create solutions. The moderator must emphasize the need for quantity over quality. The members are instructed to write down as many possible ways to tackle the challenge without discussion. This quiet exercise encourages the mass production of solutions. At the end of this exercise, everyone sticks their solutions to the available fixed surface (wall, board, etc.) as fast as possible.

Vote on solutions
This is a ten-minute step. The moderator gives the team members six dots, with which they are to vote on the solutions they think would best solve the challenge.

Prioritize solutions
The team is granted 30 seconds to make a prioritized list of solutions. Ignore anything with fewer than two votes.

Decide what to act on
As expected, some opinions and solutions will be more popularly accepted than others. These solutions are decided on based on an effort-to-impact scale. In this situation, effort refers to how much effort we as a team believe it will take to implement, and effect refers to the extent to which we think it will solve our problem.

The moderator is to control the decision-making process using this scale. The team decides which solutions require more or less impact and effort. Once a consensus has been reached, the moderator should note the details of the session.

Turn solutions into actionable tasks
This is the last step. At this point, the moderator asks whoever wrote down the solution to explain the actionable

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

steps towards achieving the group's common goal.

THE IDEA NAPKIN

This is one of the techniques for quiet brainstorming. It is comparable to the Lightning Decision Jam strategy. The group is instructed to write down their ideas and an elevator pitch on a brainstorming template. They are also expected to write down who they are solving the problem for and what problem they are solving in two columns each. Everyone is to share their ideas on napkins at the end of the session once everything has been written down. An effort and impact matrix is used to prioritize these ideas.

How to Use This Technique?
This technique can be used to:

1. Create catchy titles for your ideas;
2. To add an elevator pitch to your idea. An elevator pitch adds substance to your idea;
3. To add the group of users your idea is addressing;
4. To highlight the challenges that your idea is tackling;
5. To add more detail to your idea by defining it, how it works and where and when it can be used by the target group;
6. You can finish the idea napkin by highlighting what the involved parties stand to gain from your idea.

How Does This Brainstorming Technique Work?
Like the brain-writing technique, this approach can work in groups or teams with diverse personalities. It alleviates the initial pressure of indicating your presence by raising your hand or waving your hand. This technique thrives on the

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

principle of quantity over quality. While writing down your idea, you don't have to make complete sense from the start. The meat of the solution needs to be comprehensible. During the elevator pitch, you can explain the general idea. This system works in such a way as to encourage creative thinking and avoid "groupthink."

FIGURE-STORMING

Role-storming is another name for figure-storming. This method of brainstorming is incredibly imaginative. The group selects a well-known figure, either fictional or non-fictional, who is not present during figure-storming. They make an effort to adopt that character's perspective and way of thinking.

How to Use This Technique?
The moderator prompts the group to pick a well-known figure and consider the problem from that person's point of view.

Each team member needs to put themselves in the role of the protagonist. This is done to help the team develop ideas for how to help the character during the session. During a debate, the moderator can ask, "What would Barack Obama do?"

How Does This Brainstorming Technique Work?
This technique relies on the art of imagination. It is very successful in groups with extroverted members.

EIDETIC IMAGE METHOD

Jacqueline Sussman, a psychologist, suggested this strategy. This approach makes us think more creatively and visually. It is typically used when the session's goal is to expand on previously developed concepts or resolutions.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

How to Use This Technique?
Members are asked to close their eyes and think of ways to improve an existing system. After the exercise, the most actionable tasks are undertaken to improve the system.

This technique is popular in the phone and watch industries.

How Does This Brainstorming Technique Work?
The method works best when the aim is to enhance rather than create a new system. It is most effective when dealing with a creative team.

THE CHARETTE PROCEDURE

This brainstorming technique was developed in the 1800s and is typically used with large groups. It is carried out so that large groups are divided into smaller groups. After the facilitator announces the topic, the small groups disperse. The groups discuss the issue and generate ideas, which the facilitator passes on from one group to the next. The transmission of these ideas from one group to another lays the groundwork for the next group to build on the initial ideas.

This cycle will continue until the ideas have reached all the groups.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

THE CHARETTE PROCEDURE

When to Use the Charette Procedure?

- When dealing with a large group of people (15-30);
- When multiple topics are being discussed;
- When trying to ensure that all attendees are involved in the discussion;
- When there is limited time to discuss each issue;
- When building on an existing topic.

How to Use This Technique?

The Charette method allows for a more fluid and adaptive brainstorming session. So, the meetings can't take place in one particular place. Different groups may meet at various times and in diverse places. This process can take several days or even weeks.

With this method, the recorder plays a crucial role. This person should take notes throughout group talks. It is suggested that one recorder be used per subject area.

Choose Topics

This is the first step. At this stage, the facilitator determines

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

the number of topics to be discussed and allows some time for the groups, usually 10 to 15 minutes, to have a brainstorming session.

Choose Groups
At this stage, the large group is divided into various small groups based on the overall group size. Each group is assigned a recorder.

Ideally, there should be one recorder for each group, and the members of each group should have varying levels of experience. They should be from different social or academic groups. This would encourage and foster an environment with holistic and original perspectives.

Assign Topics
At this point, the groups are assigned different topics for discussion.
Brainstorm
The groups are given time to brainstorm and debate their respective topics. The recorder takes note of all the discussions within the separate groups. At the end of the allotted time, the debate ends.

Collate
At the end of the final group discussion, the recorder compiles the critical points discussed by the groups.

Prioritize
This is the last stage. At this stage, the groups reassemble as a whole. The recorder presents the collated lists to them.

The group decides to prioritize the list and agrees on the following plan or line of action.

How Does This Brainstorming Technique Work?

There should be meticulous preparation to get the most out

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

of this approach. This preparation includes:

1. Dividing the group into smaller groups, ideally five groups per session;
2. The assignment of a recorder. The recorder is usually a member of each of the groups;
3. Ask each group to choose a topic. If the number of groups is higher than the number of issues to be discussed, two groups can share one case;
4. The allocation of time. Each group is to be allotted a few minutes for brainstorming and generating ideas on a topic.

Advantages and Disadvantages

Some of the advantages of the Charette technique are:

1. The procedure produces high-quality outputs in large quantities. The popularly generated ideas and even the less popular solutions are polished and further curated throughout the session;
2. The process reduces the risks of time-wasting;
3. By breaking the large group into smaller groups, there is room for every member to contribute to the conversation.

The Charette procedure is a handy tool, but it has a few disadvantages. These are:

1. When the topic is merely circulating, it could become uninteresting for the individuals and create room for stalling.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

GROUP SKETCHING

Group sketching involves the use of a pen and paper or a whiteboard. A group of people with a shared interest are brought together to sketch ideas. Members can correct each other's sketches, and when new ideas are brought up, it becomes easier and faster to come up with a better idea.

How to Use This Technique?

1. Get a pen and paper or whiteboard, since that's where the idea will be written down;
2. To create fresh ideas, a group of people with similar interests and objectives are brought together;
3. Each participant will create drawings with a similar concept on paper, which are then brought together and discussed to demonstrate the relationship between the drawings.

How Does This Brainstorming Technique Work?

1. It is a useful technique for employing images to spark original thought;
2. Members build on one another's sketches to develop their own ideas, which makes it simpler to generate original ideas;
3. New ideas are obtained after finally accessing the relationship between the drawings.

QUESTIONING ASSUMPTIONS

Questioning Assumptions involves gathering team members to come together and ask one another about their

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

presumptions about a given subject. It is advised that 20 to 30 ideas be collected, as more assumptions will increase the likelihood that stronger ideas will be generated. These assumptions don't have to be accurate; they could even be founded on orthodox beliefs.

How to Use This Technique?

1. It involves creating a list of assumptions on your current project (which can either be true or false);
2. After asking each other about their assumptions, the group discusses the assumptions, and new ideas are brought up.

How Does This Brainstorming Technique Work?

1. It's easy to get new thoughts by making assumptions;
2. To come up with superior ideas, as many as 20 to 30 assumptions are required;
3. Ideas are readily available since they are based on the assumptions of many people.

WISHING

Wishing, as the name implies, is a technique in which participants are encouraged to wish for what the company could be or have; they have to imagine wild things even beyond reality. Wishing works by making team members imagine wild wishes. The imagined wishes are focused on and used to bring up good ideas.

How to Use This Technique?

1. When asking participants for their wishes regarding the company, they are encouraged to make

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

outrageous, nearly unrealistic wishes;

2. In order to get fresh and practical ideas, the chosen wishes are focused on and thoroughly examined.

How Does This Brainstorming Technique Work?

1. The vastness of the wishes inspires fresh ideas;

2. Since the wish's imagination is boundless, more suggestions for solutions to unforeseen hurdles may be generated.

ALTER-EGOS / HEROES

After-Egos / Heroes is a fun way to come up with ideas. It involves imagining a company being led by a famous person, either real or made-up. For example, how would The Flash handle this? How would Elon Musk lead us if he were in charge?

Alter-Ego / Heroes gives inspiration for new and better ideas, as problems are looked into through others' perspectives.

How to Use This Technique?

1. An assumption is formed that a well-known character will be the company's leader, and ideas are then stimulated by wondering what the character would have done to address the issue;

2. Then, someone qualified and suitable is selected to assist in realizing the goal.

How Does This Brainstorming Technique Work?

1. Imagine what a well-known character is capable of

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

accomplishing to generate ideas;

2. Since there are no limits, better and better ideas are created.

SIX THINKING HATS

The Six-Hat Technique involves having different members play the role of each of the six hats to arrive at a better idea. For example, the member wearing the Devil's advocate hat is responsible for always bringing up the bad side and limits of the plans. This tool was invented by Edward de Bono in his 1985 book, "Six Thinking Hats."

Logic

Logic is the details and facts regarding the plan.

Optimism

Optimism is the worth and advantages of the plan.

Devil's Advocate

The devil's advocates are the risks, obstacles, and limitations of the plan.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Emotion
Emotion is the feeling, intuition, and gut instincts

Creativity
Creativities are the opportunities, possibilities, and fresh concepts/ideas.

Management
Management is to ensure that rules and regulations are followed.

How to Use This Technique?

1. Each participant is assigned one of the six hats;
2. As the representatives of each hat offer their perspectives, fresh ideas emerge;
3. Each representative must adhere closely to their responsibilities.

How Does This Brainstorming Technique Work?

1. While being aware of the ups and downs, new ideas are developed;
2. Ideas come from a wide range of conversations.

FORCED CONNECTIONS

Forced connection works by deriving ideas from random objects unrelated to the problem or plan.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

A modern interpretation of the forced connections technique
Forced connection is a way to come up with ideas in which random things that have nothing to do with the problem are put together.

Forced connections example
Using a multicolored laced shoe as an example, I can derive my thoughts in two ways: first, since the shoe is multicolored, I can tackle my difficulty in multiple ways; second, looking at the shoelace indicates I can approach my problem from the bottom to the top.

How to Use This Technique?

1. Describing characteristics of a thing or circumstance;
2. Forcing a connection between the thing or circumstance with the situation.

How Does This Brainstorming Technique Work?

1. Generating ideas from unrelated events or things;
2. Thoughts are hard to come up with, yet productivity is great.

How does this approach bring benefits?
Forced connection is a hard way to come up with ideas because it takes drive and concentration, but the results are satisfying because they lead to more work getting done.

APPRECIATIVE INQUIRY

Appreciate inquiry is a reform process that is solely based on strengths and not weaknesses; it is also known as the 5-D cycle. In order to do this, stakeholders must come together

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

and discuss ideas built on the company's strengths and track record of success.

How to Use This Technique?

1. The 5-D cycle is used by the stakeholders to create ideas.

How Does This Brainstorming Technique Work?

1. The company's successful track record is utilized to generate fresh concepts;
2. Ideas are sparked from the company's strength.

The Appreciate Inquiry process

These are the 5-Ds — **Define**, **Discover**, **Dream**, **Design**, and **Destiny** — involved in the appreciative inquiry.

Define

This is the first stage where the stakeholders have to decide: What topic will undergo the appropriate inquiry experience?

Discover

This is where the stakeholders identify how much the organization's strengths and practices excel.

Dream

The plan is based on the aspects in which the company has excelled previously. This encourages both the person executing the plan and, indirectly, the business.

Design

The tactics that helped the company progress positively are then decided upon.

Destiny

The tactics are acted upon by individuals rather than waiting

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

for others' decisions.

CONSTRUCTIVE CONTROVERSY

Constructive controversy is a purposeful conversation used to address issues, rather than an argument where one side favors its own views over those of its opponents. Constructive controversy, as opposed to regular debate, is a theory that claims arguing debates provide a solid foundation for understanding complex issues.

How to Use This Technique?

1. Every member of the team gathers information;
2. Then, in order to challenge one another's opinions and observe how they differ, a friendly debate is set up. This could lead to the development of better ideas.

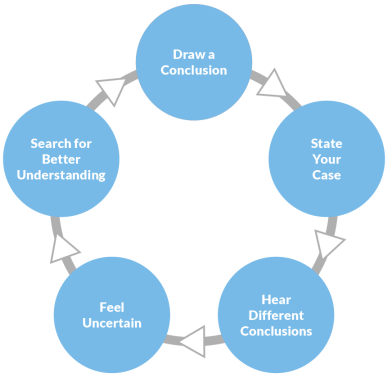

How Does This Brainstorming Technique Work?

1. Establish a cordial discussion to generate ideas from both sides;
2. The team behind constructive controversy takes ideas from both sides, unlike argument, when one side always wins at the expense of the other.

Implementing a constructive controversy discussion

A constructive controversy discussion is implemented in six steps:

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Step 1 – Organize information and derive conclusions
During this early stage, everyone forms a conclusion based on their existing viewpoint. While everyone is confident in their own unique perspective, good decisions are made when options are fairly assessed.

Step 2 – Presenting and advocating decisions
When people use complex reasoning to explain their conclusion, they better understand the situation or choice. Continual argumentation strengthens high-level thinking. Over time, more information is added to decisions.

Step 3 – Being challenged by opposing views
Group members critique each other's arguments to determine their merits. Different viewpoints inspire people to learn more.

Step 4 – Conceptual conflict and uncertainty
Uncertainty grows when a person's viewpoints are contested or contradicted by facts that are contrary to their beliefs.

Step 5 – Epistemic curiosity and perspective-taking
Uncertainty might hurt, but it encourages epistemic curiosity (the desire to know new things) that strengthens thinking. Any remaining disagreement should then be handled jointly and

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

calmly.

Step 6 – Reconceptualization, synthesis, and integration
After everyone has spoken, the constructive controversy team shouldn't choose an option; instead, it should merge ideas and data from different viewpoints.

Small-Scale Constructive Controversy

Small-scale constructive controversy is conducted by asking a friend or coworker to support the opposing motion when you don't have the time or resources to do a thorough, in-depth investigation.

AFFINITY GROUPING

Affinity grouping is a collaborative method of prioritization and brainstorming. On Post-It Notes, the group's participants will brainstorm opportunities and ideas. The group can vote on and rank each "affinity group" of ideas after forming many of them. Then, there will be a list of fresh ideas that have been prioritized after the exercise.

When Should You Use Affinity Grouping?

Affinity grouping is used to help product teams build new concepts and features. These gatherings are great opportunities for cross-functional networking. They allow other teams to contribute to product road mapping (such as marketing, sales, etc.).

Implementing the affinity grouping technique

In implementing the affinity grouping technique, the team should follow some basic steps:

1. Organize your thoughts around a main problem or issue and write on a Post-It Note;

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

2. Distribute the ideas on a table;
3. If the ideas seem to be linked, they should be put together;
4. Once all the ideas have been gathered, some will be dropped since they do not fit within a certain topic;
5. A brief and thorough summary of the group should be created. A one or two-word topic should be avoided;
6. Each title idea should be classified;
7. The category to prioritize should be decided.

The role of the facilitator in affinity grouping

An effective facilitator should be able to pique participants' interest and maintain it during lengthy meetings.

Clarify ground rules

Creating a great team requires finding the person with the problem and the best solution. The crew must be skilled and willing to accept fresh ideas.

Maintain silence

A skilled facilitator maintains silence and ensures the technique's "democratic" nature. Affinity grouping should be done in silence, especially when various personalities are involved.

Clarify context and encourage ideas

Context should be established before exploring concepts, and an idea should be studied without ignoring or rejecting it.

Affinity grouping in agile

Affinity grouping is a way for agile teams to quickly estimate the value of the user stories in their product backlog. It works well with more than 20 things. Teams use affinity estimation

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

to quickly and efficiently estimate user stories.

Step 1 – Silent relative sizing
Team members must estimate the length of the product story. Uncertain-sized items can be moved. The product owner or another competent stakeholder can clarify the tale's size or shape.

Step 2 – Editing the wall
After each team member posts a story, they should be resized. A team conversation regarding story execution, design, or barriers helps. Certain tales may be reordered to properly reflect their size.

Step 3 – Placing the items
The scale must be divided and labeled so that each story may be classified by the plot. Appropriate spacing should be provided on the scale's wall to help team members understand bucket sizes.

THE FISHBONE DIAGRAM

A fishbone diagram, also known as a cause-and-effect diagram or an Ishikawa diagram, is a graphical tool that is used to identify and evaluate the probable causes of a particular issue or problem.

A Japanese quality control expert, Dr. Kaoru Ishikawa, is credited with coming up with the fishbone diagram. He made it to help workers avoid solutions that only fix the symptoms of a much bigger problem.

Fishbone diagrams are utilized in the "analyze" phase of the Six Sigma DMAIC (define, measure, analyze, improve, and control) methodology for the purpose of problem-solving.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

These diagrams are regarded as one of the seven fundamental quality tools.

In a fishbone diagram, brainstorming is combined with a particular type of mind map template that is often used for root cause analysis. As a method for determining cause and effect based on test cases, it is thought to be very effective.

A fishbone diagram is a valuable tool in the process of developing new products as well as diagnosing existing ones. Its primary purpose is to center a conversation on a specific issue.

The design of the graphic, which resembles the skeleton of a fish, is where the term "fishbone" originates from. In most cases, the fishbone design is constructed from right to left, with each big "bone" of the fish branching out to include smaller bones, each of which has additional detail.

The fishbone diagram is made up of a central spine that represents the problem or issue being studied, and branches that indicate the numerous probable sources of the problem. Many times, these factors are put into different groups, such as materials, equipment, environment, people, processes, and management.

When To Use A Fishbone Diagram

Fishbone diagrams are commonly used in a variety of settings, including manufacturing, healthcare, and service industries, to help identify and solve problems. They are used to finding and understanding the complex relationships between different factors that may contribute to a problem, as well as to coming up with solutions.

Originally developed as a quality control tool, you may find a fishbone diagram helpful when used in the following cases:

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

- To determine which factors may have contributed to a problem;
- When looking at a topic from a new perspective is required for any reason;
- In order to prevent problems from recurring and prevent employee exhaustion;
- To assist in the development of a product that addresses issues that are present in the existing products on the market;
- In order to guarantee that the problem will be fixed by any corrective steps that are taken;
- To expose weak spots or bottlenecks in a business process as a whole;
- To speed up the thought process in situations where more traditional methods of problem-solving would take too much time;
- It serves as an excellent mental stimulant for tackling difficult problems and coming up with innovative solutions.

How to use the Fishbone Diagram

Due to the fact that a fishbone diagram is only a graphical depiction of cause and effect, its use, in reality, is very straightforward. Despite this, the method is an effective means of determining the factors that contribute to the occurrence of issues.

The problem at hand or the consequence of the problem occupies the position of the fish's head. Whereas a list of potential causes of the issue may be found on each of the individual "bones" of the fish, and these potential reasons are,

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

wherever it is practicable to do so, organized into categories on each bone. The inclusion of categories in Fishbone Diagrams encourages problem-solving teams to investigate a broad variety of possible reasons that might not be immediately clear.

Here are the steps for using a fishbone diagram appropriately:

Define the problem:
This step focuses on figuring out the problem the diagram aims to help solve. The actual problem should be expressed in the clearest and most succinct manner possible. Before moving forward, you should make certain that there is consensus among all the members of the team.

Define the categories of causes:
This step is all about figuring out the main groups or factors that might be causing the problem. These are typically referred to as the "bones" of the fishbone diagram and are usually labeled with headings such as "people," "process," "equipment," "materials," "environment," and "methods."

It's important to remember that the categories will be different for each business, but the environment, the technique, the available human resources, and the equipment are some of the most common ones.

Brainstorm potential causes
In each category, you and the team are to brainstorm a list of potential causes for the problem. For example, under the "people" category, possible causes might include a lack of training, a lack of experience, or poor communication.

You can start by asking, "Why does this happen?" and then put each response down as a branch under the appropriate category.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Probe further

This step generally focuses on diving into the highlighted problems. In order to do this, after analyzing the list of potential causes, you must identify the root causes of the problem. These are the underlying factors that are most likely to be causing the issue.

To get the answers you need, you can start by repeating the question from the last phase. These "sub-causes" of the main problem can be thought of as secondary branches. They are especially important when the main cause is large or complicated and more research is needed.

After the group has thought of all the possible sub-causes, it is time to look into the factors that led to the problem in more depth. Here you will have to look for factors that are mentioned several times but with slightly altered phrasing each time.

It's also a good idea to do surveys with customers or employees to find out if certain reasons are true. You can also arrange the causes in a logical order under each category. This can help identify patterns or trends that may be contributing to the problem.

Once the root causes have been identified, brainstorm and prioritize potential solutions for addressing the problem.

Fishbone Diagram best practices

Creative a diverse team

Even though it might be tempting to put together a group of people who know a lot about the problem, it will be better for everyone if other employees are also included.

This is because employees from outside the company who are not directly involved in dealing with the issue can contribute a more balanced, unbiased, and objective

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

perspective.

Clarify the major cause categories
When it comes to business and marketing, one of the best places to begin is with the 8 Ps of product promotion. In other words: the product, price, place, promotion, personnel, process, physical evidence, and performance.
When creating your fishbone diagram, it is important to take these factors into account, as they make up the majority of the business world and, as such, most likely have an influence on your business. So an improvement in one of the factors would directly translate into a step towards fixing the discovered problem.

Keep it simple.
It is important to maintain a relatively straightforward approach. This is because fishbone diagrams that show too many possible causes become cluttered and hard to understand quickly. Therefore, you should consider asking each member of the team to find out which four potential reasons they believe to be most likely. After that, pick the four categories that got the most votes and get started with the procedure.

Fishbone diagram examples
Below are some examples of how a fishbone diagram is utilized:

Supermarket chain
The team identifies the primary issue that has to be addressed as the "mouth" of the fish on the fishbone graphic.

They include the following in their description of the problem: "items that are incorrectly picked in the warehouse, experience delayed delivery, or are damaged in transit."

The next step is for the group to identify the five different

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

causes of the problem and provide a response to the question, "Why does this happen?" for each category.

- **Materials:** This includes incorrectly packed items and products that were shipped from either the warehouse or the supplier;
- **Measurements:** Incorrect delivery time estimate;
- **Personnel:** Improper handling of the goods, carelessness, human error, and a lack of available truck drivers;
- **Machines:** Delivery made using the wrong truck, poor use of a forklift to unload things, and an inventory management system that is either defective or unreliable;
- **Environment:** Heat, humidity, and rain damage, poor road quality.

In accordance with the third step of the process, the group then investigates further by repeating the question, "Why does this happen?" in an effort to locate other contributing factors.

For example:

- **Improper packing material:** Less expensive materials are utilized so that both time and money can be saved. This, however, is a direct cause of packaging issues;
- **Product mishandling:** Employees are not provided with training on the appropriate approach to manage the company's inventory, and also do not have the incentive to safeguard corporate property;
- **Heat damage:** Refrigerated trucks are not used to

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

deliver perishable products such as chocolate.

After these issues have been uncovered and a fishbone diagram of the issue has been created, the next step is to analyze the results. As a result of being able to pinpoint the most significant issues, the business may now address them in a manner that is both more productive and economical.

Software subscription

In the next illustration, let's go through the same steps with a software firm that came to the conclusion that 55% of its customers canceled their subscriptions after the first month of using the product.

After determining the primary issue at hand, the team proceeded to investigate the procedures that were likely involved in the development of the problem. A lack of payment choices, credit card expiration dates that invalidate automatic renewal, a lack of warnings that payment is approaching, and a payments interface that is not user-friendly all contribute to this problem.

Marketing: the lack of relationship marketing strategies, the inability to provide rewards or incentives for repeat subscribers, and the inability to keep the product or service at the forefront of consumers' minds

As in the first example, once the group has come up with all the possible causes of a problem through brainstorming, the facilitator will help the group rank the possible causes by how important they are and draw a hierarchy, which is the same thing as a fishbone diagram.

Finding the main problems and their sub-causes is a big step toward solving the problem as a whole, because it lets the team focus on the parts of the problem as a whole rather than on bits of the problem that are spread out as different

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

problems. This is ultimately the major goal of a fishbone diagram.

LOTUS DIAGRAM

A lotus diagram is a useful tool for brainstorming and idea generation. The graphic makes it easy to look at and organize priorities by putting the most important topics of the large subject matter in the spotlight.

A lotus diagram, also known as a radial diagram or a spider diagram, is a graphical representation of data that uses concentric circles to show the relationships between different pieces of information. It is often used in businesses and organizations to visualize and analyze data, find patterns and trends, and share information in a clear and concise way.

It is a method for creative thinking, often referred to as the "lotus bloom method." It was suggested by Michael Michalko, and it enables you to broaden your thinking beyond the typical lines you would go.

The Lotus Blossom Technique focuses on the power of brainstorming on specific areas of interest in having people draw a picture of an idea. It is comparable to mind mapping, but it has a more organized format, and it challenges you in ways that you won't find in traditional mind mapping.

The lotus diagram template typically consists of a central circle, or hub, with a number of spokes radiating outward from the center. Each spoke represents a category or aspect of the data being looked at, and the length of each spoke shows how important or valuable that category or aspect is. The spokes are usually labeled with the names of the categories or aspects, and the area between the spokes can be filled in with relevant data or information.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Completing a lotus diagram

There are several ways to create a lotus diagram, including using specialized software or drawing tools, or even a simple pen and paper. To create a lotus diagram using a template, you will typically need to follow a few steps:

Select a medium

On a whiteboard, a simple sketch of the structure is all that is required to produce a lotus diagram. Teams can also use Post-It notes or an online platform that makes it easier for people to work together.

Select the central topic

After picking a medium and a central topic, you can then place them in the center of the grid for discussion and expansion. One of the benefits of using a lotus diagram is that it allows for the comparison of multiple data points or categories at a glance. A lotus diagram shows how different pieces of information relate to each other visually. This can help find patterns, trends, and places where information overlaps or diverges. It can also be used to communicate complex ideas or concepts in a clear and easy-to-understand manner.

Brainstorm

This step focuses on brainstorming solutions and possible ways to solve the problem. It is important to urge every member of the team to contribute their ideas for filling in the eight squares.

Expand

After the brainstorming, each of the eight auxiliary notions is placed in its own lotus diagram. This new lotus diagram is placed around the original design that was made in the phase before this one. It is not necessary to fill every space with a different suggestion. Instead, the group should start at one end of the diagram and work their way around it while

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

recording their initial, unplanned thoughts.

Combine and synthesize
Following the expansion, any concepts or thoughts that are similar to one another should be merged into a single lotus diagram whenever it is possible to do so. When all the diagrams are finished, the group may do an analysis of each diagram and exchange opinions with one another. When describing possible romantic partnerships, some people like to use arrows, while others like to use different colored post-it notes.

Benefits of a lotus diagram

Many groups find it helpful to use a Lotus Diagram Template, mostly because it adds some variety to what would otherwise be a boring brainstorming session. The following is a list of some of the benefits of using the lotus diagram:

Speed
The lotus diagram technique is known for its speed, as many have claimed that in fewer than thirty minutes, teams were able to develop structured and connected thoughts on a topic by using the lotus diagram.

Flexibility
The graphic is applicable to practically all different kinds of topics. In addition to this, the structure of the framework makes it possible for further detail to be provided about each topic by way of the addition of new diagrams that revolve around the primary issue.

Lateral thinking
The brainstorming process also promotes thinking in a more lateral fashion. This is because when the group is at a loss for what to do next, they only need to consult the diagram to think of side ideas that are connected to the overarching notion.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Simplicity
You may also use lotus diagrams to simplify complicated ideas by breaking them down into their component parts.

Collaboration
In a conventional lotus diagram, which has eight grids that are next to one another, each member of the team may be given the responsibility of finishing one grid. This assures that each member has an equal say in the matter. When there are more than eight people working together on a project, maintaining cooperation may be accomplished by just introducing more supplementary ideas, often known as "petals."

FUTURES WHEEL

The future wheel diagram is a visual tool used to explore and analyze possible future scenarios for a particular topic or issue. It is a useful tool for organizations, businesses, and individuals to think about and plan for the future and to identify potential risks and opportunities that may arise.

Jerome C. Glenn came up with the method in 1971 while he was a student at the Antioch Graduate School of Education. Its main benefit is that it is easy to use and can find a wide range of results in a short amount of time.

Glenn made the Futures Wheel so that he could figure out what would happen if certain things continued to happen or if certain trends continued. But it can be employed in decision-making to pick among several possibilities, and it can also be used in change management to determine the repercussions of change. The tool is also extremely helpful, when it comes to the brainstorming stage of the impact analysis process

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

In addition to being a useful planning and analysis tool, the future wheel can also be a useful communication tool. Visualizing different possible futures can help to engage stakeholders and facilitate discussion and decision-making.

As the world gets more complicated and uncertain, the future wheel has become a useful tool for organizations and people who want to figure out the future and make smart decisions. The future wheel is a powerful way to explore and understand the many possible futures that lie ahead. It can be used for strategic planning, risk management, or just to get people thinking and talking.

Why do it?
Futures Wheels are mostly used in the field of Future's Studies, which is also called futurology or futurism. This is also where the method was first created. In addition to this, the technique has found applications in sectors such as politics and social studies and now has a wide variety of applications in those sectors, with it being primarily used for:

- Analyzing the prospective effects that might be brought forth by recent developments or upcoming possibilities;
- Putting one's thoughts about future events or trends in order;
- The process of determining the outcomes that may be brought about by a plan;
- Demonstrating a web of intricate interconnections.

Nevertheless, they are also applicable in the disciplines of project management, business analysis, and the design and development of systems and software.

And fortunately, Dator's second law of the future, which

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

argues that any helpful thought about the future should appear to be stupid, does not apply to these sectors. This is quite a fortunate development, as studies of the future often focus on time spans ranging from 20 to 30 years. The majority of business analysts and project experts are focused on much shorter time frames, which enables a more realistic approach to the future, in which at least certain aspects of the future can be reliably forecasted with some degree of confidence.

In particular, they are a great way to find out about both non-functional requirements and functional requirements that could be implemented in a reasonable way to future-proof a solution that is already being used, whether it was built or bought.

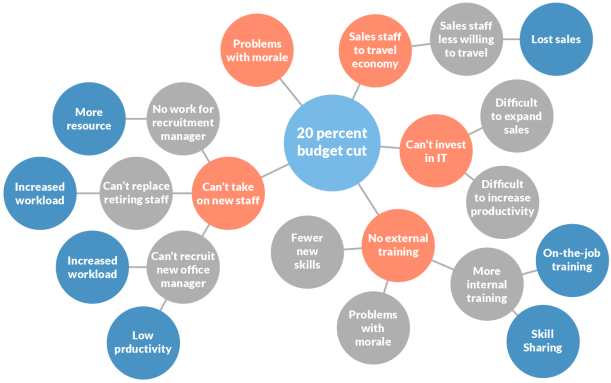

Futures Wheels show their true value when many different versions of the tool are made to look into different but related patterns or events. In this case, the business analyst and the project team can figure out the consequences and high-level requirements that are common to multiple options. They can then use these consequences and high-level requirements to make their future business plans and to define the design of their solution so that it can support the common and likely events and requirements of the future.

The end result is a solution design and business processes that are better prepared for things that could happen in the future and are less likely to need big changes to meet business needs in the future.

Futures Wheel Example

The budget for Judith's department will be cut by 20% in about six weeks. To prepare for this, she gathers all the managers under her supervision and has them complete the Futures Wheel below in order to determine all the potential outcomes.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Now that she has more information, Judith can see that the reduction in employees will have a substantial effect on her team. She is now aware that in order to circumvent the shortfall in her budget, she will need to investigate each and every other potential solution first. The reduction of the workforce will have to be an absolute last resort.

She is also told that this budget cut could indirectly lead to a lack of enthusiasm and a drop in production. Therefore, she has to be prepared to boost the spirit of the team and assist individuals in becoming more productive. Additionally, she may also have trouble increasing sales, so it's important for her to set realistic goals. The diagram also showed that there would be more chances for people on the team to share their skills and learn on the job. Which is one of the positive effects that the budget cut would have.

This example clearly shows one of the main benefits of the future wheel, which is that it allows for the exploration of a wide range of potential futures rather than just one likely scenario. This can help organizations and individuals be more prepared and resilient in the face of uncertainty and change. It can also help to identify potential blind spots or areas

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

where further research or analysis is needed.

Constructing a futures wheel

The future wheel consists of a central hub, representing the present, with spokes emanating from it, representing different possible futures. Each spoke represents a different situation, and the size of the spoke shows how likely it is that that situation will happen.

Here is a straightforward method for creating a futures wheel:

Identify the trend

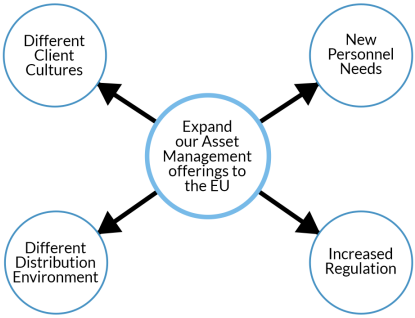

In this first step, you need to think of a trend, problem, event, or possible solution that you want to tackle with the future wheel and write it in the middle of a piece of paper.

Identify direct, first-order consequences

In this step, you are to think about the trend's immediate consequences. To do so, it might be useful to examine the trend as a type of change to generate thoughts.

As you list your thoughts and points, draw a circle around each consequence and connect it to the core trend with an arrow. It's important to note that at this point, all possible outcomes should be listed, regardless of likelihood.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

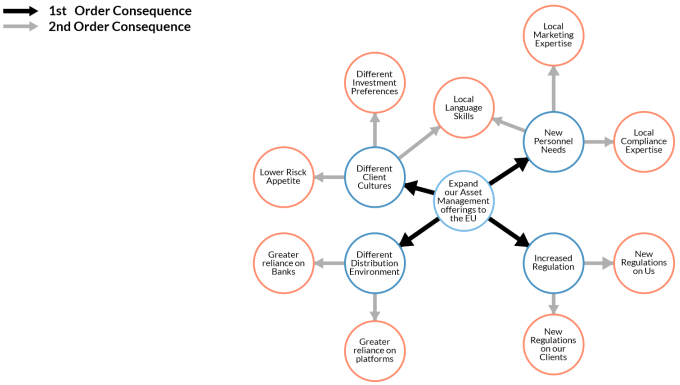

Identify indirect, second-order consequences
This step tries to find out more about the future by asking, "What are the likely second-order effects of each of the direct first-order effects?"

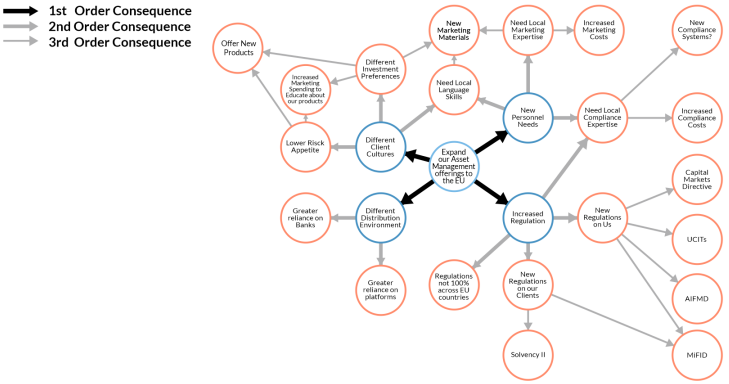

The ensuing answers, in the same way as the last step, should be added to the diagram.

Third- and fourth-order implications, and so forth.

To better comprehend the link between each idea and identify the different "spokes" of the wheel, team members can use a distinct color for each order level. In general, the more strategic an event is, the more orders it will need, so you should keep adding until you've used up all your options.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

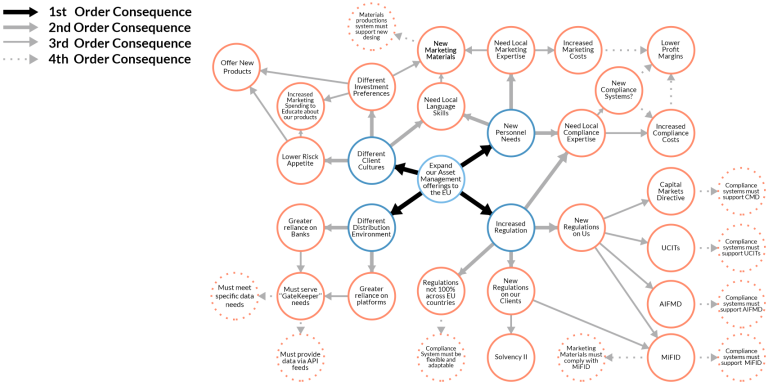

Evaluate implications

One important thing about the futures wheel is that it can find lower-level effects that make or reinforce higher-level effects.

And as such, this step focuses on crucially scrutinizing each and every spoke of the wheel to spot not only their likelihood, but also the severity of their occurrence.

This helps the team figure out how to evaluate unplanned reinforcement processes that make specific outcomes better or more likely to happen.

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

Prioritize and plan

The implications should then be prioritized in terms of those that require urgent attention, those that require preparation, and those that require monitoring.

You should consider each group's influence on future strategy development and provide meaningful recommendations to important employees. As a rule of thumb, negative repercussions necessitate risk reduction, while positive outcomes present a potential for profit.

CONCLUSION

To summarize, one of the primary advantages of brainstorming is its ability to unleash creativity through collaboration. It's a great way to get your team to work together and come up with fresh ideas that could take your company to new heights.

Contrary to popular opinion, it is not only a popular method for generating new ideas and finding solutions to problems, but also a way to ensure the growth of the group or the organization as an organized front. This is because it involves bringing a group of people together to generate as many ideas as possible in a short period of time.

After a successful group brainstorming session, the process has the potential to leave the team feeling inspired, accomplished, and enthusiastic. This is why effective brainstorming strategies are necessary, as besides planning and strategizing, brainstorming activities have the potential to make or break a team. It's not uncommon for the whole team to feel uninspired after a failed brainstorming session, whether it was unproductive, boring, or unpleasant.

This is why it is important to note that in brainstorming, the goal is to come up with as many creative and diverse ideas as possible without evaluating or criticizing them. It's important to keep in mind that brainstorming is not about finding the perfect solution, but rather about generating as many ideas as possible. It's also important to create a safe and supportive environment where participants feel comfortable sharing their ideas without fear of judgment. So that even if the brainstorming session fails, team members can leave with hope for the next session and be inspired by what little was

This PDF File was purchased by Muchamad - kurniatisri952@gmail.com
Copyright The Business Model Analyst - https://businessmodelanalyst.com/ - Distribution prohibited

accomplished. By using these methods, you can help people come up with new and interesting ideas during a brainstorming session.
